The following table contains, participants feedback for the calendar year 2023 that weren't part of the prescribed consultation but in the participant opinion, their feedback warrants further discussion as part of the annual prioritisation process.

Ref	Participant	When and what was the original consultation	Feedback provided
1	Red Energy and Lumo Energy	January 2023. 2023 Package 1 (IN008-19, IN011-15, IN011-22, IN006-22, IN008-22	The current requirement for processing and communicating customer-own reads ensures prompt action by a retailer and a distributor to ensure consumers can receive billing on a validated customer-own read in the event that a distributor fails to read the meter. Additionally, the current procedures clearly offer retailers the opportunity to refuse a customer-provided read if it is not submitted "…in accordance with the guidance and requirements provided by the retailer…" after the failure of a distributor to read a meter. The proposed change has the potential to require system changes for distributors and retailers. The GRCF agreed that Package 1 would not include any system changes, and the scope of the customer-own read changes does not align with that agreement. In particular, the amended phrasing creates the potential for retailers to incur costs should a distributor amend their access arrangement to include an expectation that a retailer communicate a customer-own read "on an agreed timeframe". We strongly urge AEMO to remove the additional wording proposed in IN008/19 and reconsider it at a later stage, if at all. AEMO must reconsider the limited benefits and potentially unintended consequences of IN008/19. Red and Lumo support the other issues included in Package 1.
2	AGL	January 2023. 2023 Package 1 (IN008-19, IN011-15, IN011-22, IN006-22, IN008-22	AGL notes AEMOs comments regarding definitions and suggest that the definition of CoR be added to the change register for future action.
3	Red Energy and Lumo Energy	January 2023. 2023 Package 2 East Coast (IN001-23, IN005-23)	Participant Build Pack 2 - Glossary should be updated with entries for BAR and GRMS.

4	AGL	August 2023 – 2023 Package 5 – RoLR (N002/23, IN003/23, IN012/22, IN009/22, IN008/17 and IN008/20)	AGL notes that there are further reviews of RoLR being undertaken by AEMO and suggests that as part of this broader review, that the various Gas Requirements be more holistically reviewed to ensure that they are fit for purpose following these procedure changes. Further, many of the RoLR requirements are spread out within various procedures and Technical Specifications, which may make it difficult for Participants to locate at the time of a RoLR. The NEM has brought all the RoLR elements together into a specific RoLR document, making it far easier to review requirements for a RoLR event. It may be worthwhile, maintaining at the very least, a cross reference of RoLR obligations in the various procedures.
