Subject: Application to include 3 x Philips Street Luminaires onto AEMO Load Table

Dear David,

Philips Lighting has been invited to seek inclusion of the following Streetlight luminaires in the NEM load table by Energex, per the attached letter. Note, the first three items in Energex Letter are already on the NEM load table.

The following fittings are being put forward for inclusion:

Description	Average Tested Wattage
BRP393 170W	171.59W
BRP393 240W	235.57W
BRP394 270W	266.38W

The following documents have been included in this submission:

- Supporting document from Energex – requesting inclusion onto AEMO load table
- LCP – Roadflair BRP393 170W: 171246LCP_170W.pdf
- LCP – Roadflair BRP393 240W: 180327LCP_240W.pdf
- LCP – Roadflair BRP394 270W: 180326LCP_270W.pdf
- Datasheet for Roadflair Streetlight luminaire

The luminaires were tested using a NEMA base shorting cap, and the PE Cell load was not included in the Test Reports.

Philips Lighting Australia Limited

Australia

Each luminaire will have marking complying with TS 1158.6. This will be achieved by placing a label with indelible ink on an area of the luminaire that is visible when the luminaire is installed.

I appreciate your assistance with this application for inclusion onto the AEMO Load table.

Kind Regards,

Jacek Lipiec
