Subject: Application to include Philips GreenVision Xceed onto AEMO Load Table

Dear David,

Philips Lighting has been invited to seek inclusion of the GreenVision Xceed Streetlight luminaire in the NEM load table by Endeavour Energy, per the attached letter.

The following fittings are being put forward for inclusion:

Description	Average Tested Wattage
BRP372 LED152/NW 125W	123.29W
BRP371 LED109/NW 90W	89.57W

The following documents have been included in this submission:

- Supporting document from Endeavour Energy – requesting inclusion onto AEMO load table
- LCP – Greenvision Xceed 125W: 216222.pdf
- LCP – GreenVision Xceed 90W: 216223.pdf
- Datasheet for GreenVision Xceed Streetlight luminaire

The luminaires were tested using a NEMA base shorting cap, and the PE Cell load was not included in the Test Reports.

Each luminaire will having marking complying with TS 1158.6. This will be achieved by placing a label with indelible ink on an area of the luminaire that is visible when the luminaire is installed.

I appreciate your assistance with this application for inclusion onto the AEMO Load table.
