

National Gas Market BULLETIN BOARD

Exemption of BB Production Facility – Camden CSM

The Bulletin Board Operator (BBO) under the National Gas Rules (the Rules) exempted AGL, the Operator of the Camden CSM BB Production Facility (the Facility), from providing daily data (3-day capacity outlook and actual production data) to the BBO in relation to the facility, effective 1 July 2009. This exemption is subject to the following conditions as set out in rule 164:

1. The Operator must provide the nameplate rating of this facility in writing to the BBO by 31 December 2009; and
2. The Operator must notify the BBO in writing as soon as practicable if there is a change to the nameplate rating which may impact the facility.

The reason for the making of the exemption is that the effective nameplate rating of the Facility is less than 20TJ of Natural gas per day and accordingly the Facility met the criteria in subrule 151(7)(b) of the Rules.

Bulletin Board Operator.

NOTE: This is the sole BB Production Facility in the Sydney production zone operated by AGL and as it has an aggregated capacity of less than 20TJ of natural gas per gas day, rule 151(5) does not apply.
