

Reasons for Declaration of the Kenya Gas Plant as a Bulletin Board Facility

The Australian Energy Market Operator (AEMO), as the Bulletin Board (BB) Operator, has served notice to Queensland Gas Company as the operator of the Kenya Gas Plant, that the Kenya Gas Plant is declared to be a BB Facility under Rule 153 of the National Gas Rules effective from 6 July 2009 (the facility declaration date).

Reasons for declaring Kenya Gas Plant

The Kenya Gas Plant will operate in the Roma zone, contributing a significant amount of gas flow to the South-West Queensland area.

The Kenya Gas Plant will contribute an alternative gas supply to Queensland in the event of a supply shortfall.

Data Requirements of the Kenya Gas Plant

The data requirements of the Kenya Gas Plant to be provided to the BB are as follows:

- a) A name plate rating (standing capacity (MDQ));
- b) A reverse capacity (RMDQ), if appropriate;
- c) 3-day capacity outlook for Kenya Gas Plant;
- d) Actual Flow data; and
- e) 3-day LCA flag outlook for Kenya Gas Plant.

Provision of the above data will further the understanding of the capacity and flows in the Roma zone.
