

AEMO plans to publish a number of reports covering various aspects of the series of events that occurred in June 2022. Given their extensive impact, reporting will include a reviewable operating incident report under clause 4.8.15 of the National Electricity Rules (NER) which is planned to cover:

- An outline of the series of events, including directions and market suspension.
- Potential insecurity associated with constraints, in particular transfer limits on the Queensland to New South Wales interconnector on 13 June 2022.
- Potential exceedance of the frequency operating standards on 17 June 2022.
- AEMO’s initial recommendations in relation to this series of events.

The table below identifies key reports relating to these events and their scheduled publication timeframes.

Report	Timeframe
NEM	
Reliability Emergency Reserve Trader (RERT) 5 business day reports for 14/06/22, 15/06/22 and 17/06/22	Published
