- Was not opening to the General worksheet
- Export file default filename was irrelevant
- Scenario worksheet was not being populated

1.6.2 Price Setter File Editor v1.19

- Export file default filename was irrelevant
- Document level element had an incorrect name

2. Pre-requisites:

- Excel 97
- Internet Explorer 5.0 or greater. If you do not have this version already installed install the latest version which is Internet Explorer 5.5. You can get this product from <http://www.microsoft.com/windows/ie/download/ie55sp1.htm>
- Microsoft XML 3.0 parser which is available from <http://download.microsoft.com/download/xml/install/3.0/Win98Me/EN-US/msxml3.exe>. However, to install this product you must first install the Microsoft Installer. Get this from <http://www.microsoft.com/msdownload/platformsdk/instmsi.html>

3. Instructions:

'Import' will read in either the 'input' or 'loaded' file. Only sheets with the 'INCLUDE' column set to 'Y' on the 'GENERAL' sheet will be populated.

The sheet 'XML Fields' contains the mapping of XML elements/attributes to sheet/column. A single element can only have its data placed on a single sheet. The 'Orientation' column specifies whether the sheet has data displayed Vertically or Horizontally.

'Export' will write out to a specified 'input' or 'loaded' file all the data displayed in the sheets with 'INCLUDE' set to 'Y'.

'Create Obj. Func. Report' (only on the 'loaded' file viewer) allows the user to select a number of 'loaded' files and have their case id's and objective functions listed in a single specified .csv file.
