Test Results

Test ambient temperature was 25.0 °C.

There are 10 pcs samples provided by manufacturer and no seasoning to them.

The samples are installed straight down, no dimmer in the test circuit.

The parameters are read by YOKOGAWA Digital Power Meter WT210, the accuracy of power is ±0.1W .

The stabilization time of the each sample was 120 minutes, and the total operating time including stabilization was 121 minutes.

Test Methods

Seasoning of SSL Product

For the purpose of rating new SSL products, SSL products shall be tested with no seasoning. Therefore, no seasoning was performed.

Ambient Conditions

The ambient temperature in which measurements are being taken shall be maintained at $25\text{ }^{\circ}\text{C} \pm 1\text{ }^{\circ}\text{C}$, measured at a point not more than 1 m from the SSL product and at the same height as the SSL product. The temperature sensor shall be shielded from direct optical radiation from the SSL product and optical radiation from any other source.

Stabilization of SSL Product

Before measurements are taken, the SSL product under test shall be operated long enough to reach stabilization and temperature equilibrium. The time required for stabilization depends on the type of SSL products under test. The stabilization time typically ranges from 30 min (small integrated LED lamps) to 2 or more hours for large SSL luminaires). It can be judged that stability is reached when the variation (maximum – minimum) of at least 3 readings of the light output and electrical power over a period of 30 min, taken 15 minutes apart, is less than 0.5 %.
