## Version Control

A major version change occurs when the WEM Rules or WEM Procedures require changes to the equations from a particular Trading Day onward.

A minor version change may occur for editorial changes, manifest errors or implementation changes that will apply to the same Trading Day period as dictated by the major version.

| Version | Changes | Author(s) | Approver |
| :--- | :--- | :--- | :--- |
| 1.0 | Original publication consistent with WEM Rules effec- <br> tive 1 September 2019. | Stuart MacDougall | Mark <br> Katsikandarakis |
| 1.1 | New functionality added to distinguish between pruden- <br> tials and settlements. <br> Update of Interest formulae for settlements. <br> Inclusion of Additional Repaid Amounts to be compli- <br> ant with WEM Rule 9.24.2(b). <br> Correction of SOMS_F_I(f, i) formulae for the Notional <br> Wholesale Meter. <br> Minor changes in formulae or invocation to improve per- <br> formance. | Mark <br> Katsikandarakis |  |
| 2.0 | Consequential changes due to new WEM Rules effective <br> 22 February 2020. | Stuart MacDougall | Mark <br> Katsikandarakis |

6.1 Weekly Settlement Amount ..... 108
7 Prudentials ..... 109
7.1 Trading Margin ..... 109

## 1 Introduction

The purpose of this document is to:

- outline WEM Metering, Settlement and Prudential calculations as equations;
- provide additional context or structure equations in such a way that assists in understanding; and
- outline the formulation of a system that could be used to perform both settlement and prudential functions.

This document defines many variables that are used in equations. Each variable will have the following attributes stated to assist in understanding:

| Attribute | Explanation | Example |
| :--- | :--- | :--- |
| Variable | The name of the variable | STEMP_G_I |
| Units | $\$, \quad\{ \}$, MW, MWh, MWs, \$/MW, \$/MWh, Flag, ${ }^{\circ} \mathrm{C}$, <br> $\mathrm{Hz} / 500 \mathrm{~ms}$ | $\$ / \mathrm{MWh}$ |
| Scope (SC) | Tranche (T), Channel (CH), NMI (N), Contract(C), SESSM <br> Award (SA), Essential System Service (E), Facility-Essential <br> System Service (FE), Network Contingency (NC), Facility- <br> Network Contingency (FNC), Capacity Credit Allocation <br> (A), Separately Certified Component (SCC), Facility (F), <br> Participant (P), Global (G) | G |
| Granularity (GR) | Dispatch Interval (DI), Trading Interval (I), Trading Day <br> (D), Trading Week (W*), Trading Month (M), Capacity Year <br> $($ CY), Financial Year (FY), Independent from time (X) | I |
| Rule | WEM Rule reference | 6.9 .7 |
| Description | A description of the variable | STEM Clearing Price <br> Trading Interval i |
| Ref | Either the equation number where it is defined in this docu- <br> ment, or 'I' to denote an input | I |

* Trading Week granularity will include a numeric suffix that indicates on which day of the week the Trading Week commences on i.e. $0=$ Sunday, $1=$ Monday, $\ldots 4=$ Thursday etc. This suffix will be included where the granularity is used but not in the variable name e.g. ESTIMATIONFlag_G_W $(w)$ and not ESTIMATIONFlag_G_W0 $(w)$.

Granularity has a strict hierarchy: a Capacity Year is comprised of Trading Months which are comprised of Trading Days which are comprised of Trading Intervals which are comprised of Dispatch Intervals. Some variables have no time component, for example, they relate purely to a contract. In this instances the granularity is denoted as X. This hierarchy is represented in Figure 1.

When defining a variable, it will always be defined for its granularity. For example, the variable $I R C R_{-} P_{-} M(p, m)$ is defined for a particular Trading Month m. It will only be defined by variables with a granularity of Trading Month or coarser. However, when the variable is used to define other equations it may be expressed using a granularity finer than its granularity, for example $I R C R_{-} P_{-} M(p, d)$. When the variable is expressed like this, it is implicit that it refers to the Trading Month m , in which Trading Day d falls.

A similar hierarchy (and convention) is adopted for scopes as illustrated by Figure 2.

Figure 1: Granularity hierarchy

Figure 2: Scope hierarchy

## 2 Defined Terms, Sets and Associations

Defined terms are used throughout the rules. These defined terms often convey specific information, for example the term Scheduled Facility requires the facility to be registered with AEMO as outlined in the definition. Similarly, some specific calculations only apply, or are interpreted based on these defined terms. In the implementation, these defined terms are often represented as a set of Facilities (or Participants) that meet the definition of the defined term. Furthermore, there are often associations between defined terms within the rules, for example Facilities are associated to participants through registration.
This document defines all sets with the following conventions:

- The definition of each set variable is always Global and for a Trading Day and therefore the variable name omits information about scope and granularity. For example the set of Scheduled Facilities in Trading Day d is represented as $S F(d)$, rather than being named $S F_{-} G_{-} D(d)$.
- Subsets are defined by adding a scope argument. For example $S F(p, d)$ represents the subset of $S F(d)$ associated with participant p .

### 2.1 Participant Sets

### 2.1.1 Axiomatic Participant Sets in AEMO systems

Calculations defined in the rules depend on different sets of participants. The participant sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO's systems have been created. Sets which are calculated later are often sets of participants which are defined in the rules, and in these instances the rule reference is provided.

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| WEMS_MP(d) | $\}$ | G | D |  | Set of participants with MP participant <br> class in WEMS in Trading Day d | I |
| WEMS_NO(d) | $\}$ | G | D |  | Set of participants with NO participant <br> class in WEMS in Trading Day d | I |
| WEMS_PREG(d) | $\}$ | G | D |  | Set of participants registered in WEMS <br> in Trading Day d | I |

### 2.1.2 Sets of Rule Participant classes

The following are classes of Rule Participants [MR 2.28.1]:

- Network Operator (NO)
- Market Participant (MP)
- AEMO (AEMO)

The diagram below shows the relationship between Rule Participant classes (purple) and other sets of participants (green).

These sets are defined as follows:

$$
\begin{gather*}
P \_M(m)=\bigcup_{d \in D(m)} P(d)  \tag{1}\\
P_{-} C Y(c y)=\bigcup_{d \in D_{-} C Y(c y)} P(d)  \tag{2}\\
P(d)=C O O R D I N A T O R(d) \cup E R A(d) \cup R P(d)  \tag{3}\\
C O O R D I N A T O R(d)=\{C O E\}  \tag{4}\\
E R A(d)=\{E R A\}  \tag{5}\\
W P N T W K(d)=\{W P N T W K\}  \tag{6}\\
R P(d)=M P(d) \cup N O(d) \cup A E M O(d)  \tag{7}\\
M P(d)=W E M S \_P R E G(d) \cap W E M S-M P(d)  \tag{8}\\
A E M O(d)=\{I M O W A\}  \tag{9}\\
N O(d)=W E M S \_P R E G(d) \cap W E M S-N O(d) \tag{10}
\end{gather*}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| P_M(m) | \{\} | G | M |  | Set of participants (Rule Participants, ERA and the Coordinator) in Trading Month m | (1) |
| P_CY(cy) | \{\} | G | CY |  | Set of participants (Rule Participants, ERA and the Coordinator) in Capacity Year cy | (2) |
| P(d) | \{\} | G | D |  | Set of participants (Rule Participants, ERA and the Coordinator) in Trading Day d | (3) |

| D_CY(cy) | \{\} | G | CY |  | Set of Trading Days in Capacity Year cy | I |

### 2.2 Facility Sets

### 2.2.1 Axiomatic Facility Sets in AEMO systems

Calculations defined in the rules depend on different sets of Facilities. The Facility sets outlined below are considered to be axiomatic, or the base sets, upon which all other sets will be created. These base sets are defined in terms of how AEMO's systems have been created. Sets which are calculated later are often sets of Facilities which are defined in the rules, and in these instances the rule reference is provided.

| Variable | Units | SC | GR | Rule | Description | Ref |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| WEMS_DSP(d) | \{\} | G | D |  | Set of Facilities with a DSP WEMS Type in Trading Day d | I |

| RCM_DSP(d) | \{\} | G | D |  | Set of Facilities with an indicative DSP <br> RCM Type in Trading Day d | I |

### 2.2.2 Sets of Facility Technology Types and Facility Classes

The following are Facility Technology Types [MR 2.29.1]:

- distribution system (DX)
- transmission system (TX)
- Intermittent Generating System (IG)
- Non-Intermittent Generating System (NIG)
- Electric Storage Resource (ESR)
- Load (LOAD)

The following are Facility Classes [MR 2.29.1A]:

- Network (NTWK)
- Scheduled Facility (SF)
- Semi-Scheduled Facility (SSF)
- Non-Scheduled Facility (NSF)
- Interruptible Load (IRL)
- Demand Side Programme (DSP)

These sets are defined as follows.

$$
\begin{gather*}
D S P(d)=W E M S_{-} F R E G(d) \cap W E M S_{-} D S P(d)  \tag{11}\\
i n d D S P(d)=\overline{W E M S \_F R E G(d)} \cap R C M_{-} D S P(d)  \tag{12}\\
S F(d)=W E M S \_F R E G(d) \cap W E M S_{-} S F(d)  \tag{13}\\
i n d S F(d)=\overline{W E M S \_F R E G(d)} \cap R C M_{-} S F(d)  \tag{14}\\
S S F(d)=W E M S \_F R E G(d) \cap W E M S_{-} S S F(d)  \tag{15}\\
i n d S S F(d)=\overline{W E M S \_F R E G(d)} \cap R C M_{-} S S F(d)  \tag{16}\\
N S F(d)=W E M S \_F R E G(d) \cap W E M S_{-} N S F(d)  \tag{17}\\
i n d N S F(d)=\overline{W E M S \_F R E G(d)} \cap R C M_{-} N S F(d)  \tag{18}\\
I R L(d)=W E M S \_F R E G(d) \cap W E M S_{-} I L(d)  \tag{19}\\
N D L \_W E M S(d)=W E M S \_F R E G(d) \cap W E M S \_N D L(d) \tag{20}
\end{gather*}
$$

$$
\begin{equation*}
N O T I O N A L(d)=\{N O T I O N A L\} \tag{21}
\end{equation*}
$$

$$
\begin{equation*}
N T W K(d)=W E M S \_F R E G(d) \cap W E M S \_N(d) \tag{22}
\end{equation*}
$$

### 2.2.3 Other Facility Sets

Additional sets of Facilities are required by the rules and are defined below.

$$
\begin{gather*}
R E G \_F(d)=D S P(d) \cup S F(d) \cup S S F(d) \cup N S F(d) \cup I R L(d) \cup N T W K(d)  \tag{23}\\
N D L(d)=N D L_{-} W E M S(d) \cup N D L \_M T R(d) \cup N O T I O N A L(d) \tag{24}
\end{gather*}
$$

$$
\begin{gather*}
\text { Typical_REGF }(d)=(S F(d) \cup S S F(d) \cup N S F(d)) \cap \overline{E G(i)}  \tag{25}\\
I M L(d)=\left(I R L(d) \cup N D L_{-} W E M S(d)\right) \cap W E M S_{-} I M(d)  \tag{26}\\
E G(d)=W E M S \_F R E G(d) \cap W E M S \_E G(d)
\end{gather*}
$$

### 2.4 Associations

Associations are used to link two entities to each other. These associations are used in the document for the following purposes:

- To reference a variable or attribute that applies to the parent of a child by relying on the primary or additional associations listed below e.g. UOOM_F-I(t,i) is referring to the UOOM_F_I quantity for the Facility that is associated with tranche $t$.
- To reference a Facility or NMI associated with an Intermittent Load by relying on the additional associations listed below e.g. $\operatorname{NMI}(\operatorname{IML2RG}(f, i), i)$ is referring to the set of NMIs that are associated with the Remote Generator that is associated with Intermittent Load f .

### 2.4.1 Primary Associations

| Association | Child SC | Parent SC | Description |
| :--- | :--- | :--- | :--- |
| F2P | F | P | Association between Facility f and participant p |
| N2F | N | F | Association between NMI n and Facility f (excluding <br> DSPs) |
| SCC2F | SCC | F | Association between Separately Certified Compo- <br> nent scc and Facility f |
| CH2N | CH | N | Association between channel ch and NMI n |
| C2P | C | P | Association between contract c and participant p |

| Association | Child SC | Parent SC | Description |
| :--- | :--- | :--- | :--- |
| A2F | A | F | Association between a Capacity Credit Allocation a <br> and Facility f |
| SA2FE | SA | FE | Association between a SESSM Award sa and a Fa- <br> cility f and Essential System Service e |

### 2.4.2 Additional Associations

| Association | Child SC | Parent SC | Description <br> IML2EG F |
| :--- | :--- | :--- | :--- |
| IML2NS | N | F | Association between Intermittent Load f and any em- <br> bedded generator |
| A2PM | A | Association between Intermittent Load f and any <br> separately metered NMI that is measured by another <br> connection point |  |
| A2PR | A | P | Association between Capacity Credit Allocation a <br> and the Market Participant making the allocation |
| T2F | T | Association between Capacity Credit Allocation a <br> and the Market Participant receiving the allocation |  |
| T2P | T | P | Association between a price-quantity pair and the <br> Facility associated with the price-quantity pair |

## 3 Metering Calculation Engine

Metering calculations are fundamental to settlement and prudential calculations. Due to the large volumes of data, metering calculations are separated from the main calculation engine.

Metered Schedules are calculated for:

- Non-Dispatchable Loads (excluding those represented by the Notional Wholesale Meter)
- Scheduled Facilities
- Semi-Scheduled Facilities
- Non-Scheduled Facilities
- Notional Wholesale Meter

In order to determine these Metered Schedules the following information is required:

- Connection point energy quantities
- Facility category
- Facility aggregation requirements

The purpose of this section is to define Sent Out Metered Schedules (non-loss adjusted energy) and Metered Schedules (loss adjusted energy) for each category of facility defined in the registration chapter. The Metered Schedules and Sent Out Metered Schedules for unregistered NDLs are the same as the connection point's Metered Schedules as defined previously. Intermittent Load facilities Metered Schedules do not use the same variables as all other facilities. These Metered Schedules are detailed in their own section.

The equations in the following sections incorporate the concept of Aggregated Facilities [MR 2.30], which is a Registered Facility with more than one connection point.

When estimating meter data, AEMO uses more general metering equations to incorporate estimation methodology. When actual data is available, the equations simplify to the previously outlined metering equations. The more general metering equations are detailed in the subsequent subsections.

### 3.1 Invocation

The following table outlines the invocation for the high-level calculations.

| Variable | Scope Set |
| :--- | :--- |
| $M S_{-} F_{-} I(n, i)$ | $\forall f \in S F(i) \cup S S F(i) \cup N S F(i) \cup N D L(i)$ |
| $S O M S_{-} F-I(f, i)$ | $\forall f \in S F(i) \cup S S F(i) \cup N S F(i) \cup N D L(i)$ |

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| MS_F_I(f, i) | MWh | F | I | 9.5 .2, <br> $2.30 B .10, ~$ <br> $2.30 B .11$ | Metered Schedule for Facility f in Trad- <br> ing Interval i | $(31)$ |
| SOMS_F_I(f, i) | MWh | F | I |  | Sent Out Metered Schedule for Facility <br> f in Trading Interval i | $(32)$ |
| NDL(d) | $\}$ | G | D | 11 | Set of Non-Dispatchable Loads in Trad- <br> ing Day d | $(24)$ |

| SF(d) | $\}$ | G | D | 11 | Set of Scheduled Facilities in Trading <br> Day d | $(13)$ |
| SSF(d) | $\}$ | G | D | 11 | Set of Semi-Scheduled Facilities in <br> Trading Day d | $(15)$ |

### 3.2 Connection Point Energy Quantities

Western Power is a Metering Data Agent and provides AEMO with:

- Meter energy data ( kWh ); and
- Meter standing data (Participant, TLF, DLF).

Each connection point is assigned a NMI (National Meter Identifier).
For any single Trading interval, a NMI may have multiple meter channels that measure and store energy data. The type of data varies; however, the channels containing energy data relevant to AEMO are B channels which measure generation; and E channels which measure consumption.

The image below shows a sample of energy data received from Western Power. In this example it shows that NMI 8001000347 had 9.600 kWh of consumption for Trading Interval 03:30 on its E1 channel.

```

                            </RoleAssignment>
```

Some specific items of note:

- Standing Data only provides data at a specific point in time - i.e. no historical data is stored in the file. Therefore AEMO's databases must consider how it will maintain historical information.
- The TLF is sent to AEMO against the TransmissionNodeIdentifier attribute. Market Participants (other than AEMO) receive files with the Transmission Network Identifier (TNI) in this field, and they do not receive TLFs. A TLF can be derived from a TNI and historical metering data.

Each NMI n has a non-loss adjusted energy quantity associated with it for every Trading Interval i.
Facilities without an interval meter (i.e. SCADA-only facilities) have the identical NMI name and Facility name in AEMO's systems (e.g. $\mathrm{n}=$ COLLIE_G1, $\mathrm{f}=$ COLLIE_G1).

$$
\begin{gather*}
M e t e r D a t a_{-} N_{-} I(n, i)= \begin{cases}S C A D A_{-} F_{-} I(n, i) & \text { for } n \in N O I N T M E T E R(i) \\

### 3.3 Metered Schedules (including estimation)

Metered Schedules are required to be estimated for the purposes of determining a Market Participant's Outstanding Amount.
When a Metered Schedule does not exist because data is yet to be provided by the Meter Data Agent, an estimation methodology is used to scale data from a similar period, depending on what data is available. The following sections outline:

- the estimation methodology consistent with the requirements in WEM Procedure: Prudential Requirements.
- how data statuses are used to indicate if data exists;
- how a similar interval is determined using a 'Like Day, Like Period' methodology; and
- how scaling factors are used.

### 3.3.1 Standard Metered Schedules (including estimation)

Meter Schedules are determined or estimated based on what data is available. The general philosophy for what data to use is based on the following hierarchy as dictated by the WEM Procedure: Prudential Requirements:

1. Use MeterData_N_I data for the entire Facility, if MeterData_N_I data exists for any NMI associated with Facility f, for Trading Interval i
2. Use SCADA energy data if it exists for Facility f, for Trading Interval i
3. Use EOI Quantity if it exists for Facility f, for Trading Interval i
4. Scale MeterData_N_I data for Facility f in the most recent similar interval of Trading Interval i

$$
\begin{align*}
& M S_{-} F_{-} I(f, i) \\
& = \begin{cases}S O M S_{-} N_{-} I(f, i) \times T L F_{-} N_{-} D(f, i) \times D L F_{-} N_{-} D(f, i) & \text { for } f \in N D L_{-} M T R(i) \\
S O M S_{-} F_{-} I(f, i) \times T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i) & \text { for } f \in T y p i c a l_{-} R E G F(i) \cup(, \\
M S I L_{-} F_{-} I(f, i)+M S E L_{-} F_{-} I(f, i) & \text { for } f \in I M L(i) \\
M S E G_{-} F F_{-} I(E G 2 I M L(f, i), i) & \text { for } f \in E G(i) \\
-1 \times \sum_{f \in S F(i) \cup S S F(i) \cup N S F(i) \cup N D L \cap \overline{N O T I O N A L(i)}} M S_{-} F_{-} I(f, i) & \text { for } f \in N O T I O N A L(i) \\
0 & \end{cases} \tag{31}
\end{align*}
$$

$$
S O M S_{-} F F_{-}(f, i)= \begin{cases}S O M S_{-} N_{-} I(f, i) & \text { for } f \in N D L_{-} M T R(i) \\ S O M S t y p i c_{-} l_{-} I(f, i) & \text { for } f \in T y p i c a l_{-} R E G F(i) \cup\left(N D L_{-} W E M S(i) \cap \overline{I M L(i)}\right) \\ S O M S I L_{-} F_{-} I(f, i)+S O M S E L_{-} F_{-} I(f, i) & \text { for } f \in I M L(i)  \tag{32}\\ S O M S E G_{-} F_{-} I(E G 2 I M L(f, i), i) & \text { for } f \in E G(i) \\ \frac{M S_{-} F_{-} I(f, i)}{T L F \_F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i)} & \text { for } f \in N O T I O N A L(i) \\ 0 & \text { otherwise }\end{cases}
$$

$$
S O M S_{-} N_{-} I(n, i)= \begin{cases}M e t e r D a t a_{-} N_{-} I(n, i) & \text { if } \text { AfterIMDFlag_G_D(i)=1} \text { or } i_{-} D a t a_{-} N_{-} I(n, i)>0  \tag{33}\\ e s t M e t e r D a t a_{-} N_{-} I(n, i) & \text { otherwise }\end{cases}
$$

### 3.3.2 Intermittent Load Metered Schedules (including estimation)

An Intermittent Load comprises the following components that are all measured by the single connection point associated with the Intermittent Load:

- Intermittent load associated with Load f
- Embedded Load (non-Intermittent Load) that is non-Intermittent Load f
- Generation associated with a Registered Facility $\operatorname{IML2EG}(f, d)$

The Metered Schedule calculations are different depending on whether the Intermittent Load existed prior to New WEM Commencement Day (Legacy Intermittent Load) or not (New Intermittent Load).
The figure below is a graphical representation of this configuration.

The purpose of this section is to define the Metered Schedule Quantities for each of the components. To do this, various standing data relating to the Intermittent Load and the embedded generator is used; however, the first step is to perform the following preliminary calculations to derive $A M Q_{-} F_{-} I_{\text {. }}$

Note, that the equations (35), (37) and (39) refer to more generalised equations (36), (38) and (40) to handle prudentials as well as settlement.

The net metered quantity associated with the Intermittent Load is calculated:

$$
\begin{gather*}
N N M Q_{-} F_{-} I(f, i)=\sum_{n \in N M I(f, i)} M e t e r D a t a_{-} N_{-} I(n, i)  \tag{35}\\
e s t N N M Q_{-} F_{-} I(f, i)=\sum_{n \in N M I(f, i)} e s t M e t e r D a_{t} a_{-} N_{-} I(n, i)  \tag{36}\\
N M Q_{-} F_{-} I(f, i)=N N M Q_{-} F_{-} I(f, i) \times T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i)  \tag{37}\\
e s t N M Q_{-} F_{-} I(f, i)=e s t N N M Q_{-} F_{-} I(f, i) \times T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i) \tag{38}
\end{gather*}
$$

The meter data associated with each individual NMI that is separately metered (and settled) associated with the Intermittent Load is calculated:

$$
\begin{align*}
N S_{-} F_{-} I(f, i) & =\sum_{n \in N S(f, i)} M e t e r D a t a_{-} N_{-} I(n, i) \times T L F_{-} N_{-} D(n, i) \times D L F_{-} N_{-} D(n, i)  \tag{39}\\
e s t N S_{-} F_{-} I(f, i) & =\sum_{n \in N S(f, i)} e s t M e t e r D a t a_{-} N_{-} I(n, i) \times T L F_{-} N_{-} D(n, i) \times D L F_{-} N_{-} D(n, i) \tag{40}
\end{align*}
$$

Any separately metered (and settled) quantities associated with the Intermittent Load are removed to determine AMQ.

$$
A M Q_{-} F_{-} I(f, i)= \begin{cases}N M Q_{-} F_{-} I(f, i)-N S_{-} F_{-} I(f, i) & \text { if } \text { After } I M D F l a g_{-} G_{-} D(i)=1 \text { or } i_{s} D a t a_{-} F F_{-} I(f, i)>0  \tag{41}\\ S C A D A_{-} F_{-}(f, i) & \text { elseif } S C A D A N u l l F l a g_{-} G_{-} D(i)=0 \\ 0.5 h \times S C A D A E O I_{-} F_{-} I(f, i) & \text { elseif } E O I N u l l F l a g_{-} G_{-} D(i)=0 \\ e s t N M Q_{-} F_{-} I(f, i)-e s t N S_{-} F_{-} I(f, i) & \text { otherwise }\end{cases}
$$

Then the $A M Q_{-} F_{-} I$ value is split into three components based on whether it existed prior to New WEM Commencement Day, the standing data of the Intermittent Load or its associated embedded generator.

For Legacy Intermittent Loads:

- If $A M Q_{-} F_{-} I$ is positive (generating), then the generation is attributed to the embedded generator up until its maximum sent out generation, with any excess generation being attributed to the Intermittent Load Metered Schedules.
- If $A M Q_{-} F_{-} I$ is negative (consuming), then the consumption is attributed to the embedded load up until its maximum non-intermittent consumption, with any excess consumption being attributed to the Intermittent Load Metered Schedules.

For New Intermittent Loads that are associated with a Registered Facility:

- If $A M Q_{-} F_{-} I$ is positive (generating), then the generation is attributed to the embedded generator.
- If $A M Q_{-} F_{-} I$ is negative (consuming), then the consumption is attributed to the embedded load.

For New Intermittent Loads that are not associated with a Registered Facility:

- $A M Q_{-} F_{-} I$ is attributed to the embedded load.

The diagram below illustrates this concept.

Legacy Intermittent Load [1.48.2]

New Intermittent Load [2.30B.5]
Associated with Registered Facility

New Intermittent Load [2.30B.5] No Registered Facility

Mathematically, this is achieved by performing the following calculations.
The maximum non-intermittent Load associated with Intermittent load f is determined as:

$$
\begin{equation*}
N L_{-} F_{-} D(f, d)=-N L s t a n d i n g_{-} F_{-} D(f, d) \times T L F_{-} F_{-} D(f, d) \times D L F_{-} F_{-} D(f, d) \tag{42}
\end{equation*}
$$

The maximum Sent Out Generation for an embedded generator, e, associated with Intermittent Load $f$ is determined as:

$$
\begin{gather*}
M S G E G_{-} F_{-} D(f, d)=M S G_{-} F_{-} D(I M L 2 E G(f, d), d)  \tag{43}\\
M S G_{-} F_{-} D(f, d)=0.5 h \times S O C_{-} F_{-} D(f, d) \times T L F_{-} F_{-} D(f, d) \times D L F_{-} F-D(f, d)  \tag{44}\\
S O C_{-} F_{-} D(f, d)=\max \left(0, M S O C_{-} F_{-} D(f, d)\right) \tag{45}
\end{gather*}
$$

Although the equations in the rules for Legacy Intermittent Loads are written differently to the equations below, they are mathematically equivalent.

$$
\begin{align*}
& M S E L_{-} F_{-} I(f, i)= \begin{cases}\min \left(0, \max \left(N_{-} F_{-} D(f, i), A M Q \__{-} I(f, i)\right)\right) & \text { for } f \in I M L(i) \cap \operatorname{LegacyIML}(i) \\
\min \left(0, A M Q_{-} F_{-} I(f, i)\right) & \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML}(i)} \\
A M Q_{-} F_{-} I(f, i) & \text { and } \operatorname{IML2EG(f,i)\text {isnotNULL}} \\
& \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML}(i)}\end{cases}  \tag{46}\\
& M S E G_{-} F-I(f, i)= \begin{cases}\max \left(0, \min \left(M S G E G_{-} F_{-} D(f, i), A M Q \__{-} F_{-}(f, i)\right)\right) & \text { for } f \in I M L(i) \cap \operatorname{LegacyIML(i)} \\
\max \left(0, A_{-} F_{-} I(f, i)\right) & \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML}(i)} \\
0 & \text { and } I M L 2 E G(f, i) \text { is not NULL } \\
0 & \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML}(i)}\end{cases}  \tag{47}\\
& M S I L_{-} F_{-} I(f, i)= \begin{cases}A M Q_{-} F_{-} I(f, i)-M S E L_{-} F_{-} I(f, i)-M S E G_{-} F_{-} I(f, i) & \text { for } f \in I M L(i) \cap \operatorname{LegacyIML(i)} \\
0 & \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML(i)}} \\
0 & \text { and } I M L 2 E G(f, i) \text { is not NULL } \\
& \text { for } f \in I M L(i) \cap \overline{\operatorname{LegacyIML(i)}} \\
& \text { and } I M L 2 E G(f, i) \text { is NULL }\end{cases} \tag{48}
\end{align*}
$$

The non-loss adjusted Metered Schedules for Embedded Load and Embedded Generator and Intermittent Load are defined as:

$$
\begin{align*}
& S O M S E L_{-} F_{-} I(f, i)=\frac{M S E L_{-} F_{-} I(f, i)}{T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i)}  \tag{49}\\
& S O M S E G_{-} F_{-} I(f, i)=\frac{M S E G_{-} F_{-} I(f, i)}{T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i)}  \tag{50}\\
& S O M S I L_{-} F_{-} I(f, i)=\frac{M S I L_{-} F_{-} I(f, i)}{T L F_{-} F_{-} D(f, i) \times D L F_{-} F_{-} D(f, i)} \tag{51}
\end{align*}
$$

### 3.3.3 Data Statuses

Statuses are set up to distinguish between NULL values and 0 values in AEMO's generic settlement calculation engine. Although these statuses are defined as equations in this section, they are treated as inputs in the metering calculations.

$$
\begin{gather*}
\text { isData_F_I(f,i)=\{} \begin{array}{ll}

### 3.3.4 Like Day, Like Period (LDLP)

A 'Like Day' of Trading Interval i is defined as follows:

- If i falls on a Trading Day d that is a Public Holiday, then a 'Like Day' is any Trading Day that is a Sunday.
- If i falls on a Trading Day d that is not a public holiday, then a 'Like Day' is any Trading Day that is not a Public Holiday and is the same day of the week as d.

The set of Trading Days that are a 'Like Day' of Trading Interval i is infinitely large. For the purposes of estimation, the set of Like Days we will use will be defined as the union of:

- the set of Like Days that occur after the last Trading Day for which the relevant Interval Meter Deadline has passed; and
- the set containing the most recent Like Day for which the relevant Interval Meter Deadline has passed.

A 'Like Period' of Trading Interval i is defined as any Trading Interval that is the same time of day as i.
A 'Like Day, Like Period' of i, is defined as a Trading Interval that both falls on a 'Like Day' of i and is a 'Like Period' of i.
$L D L P(i)=$ The set of 'Like Day, Like Periods' of $i$ as illustrated in the description above and table below.
$L D L P(i)$ set is ordered from most recent interval to least recent interval. LDLP(i) [1] refers to the most recent interval in the set and $\operatorname{LDLP}(\mathrm{i})[\mathrm{j}]$ refers to the least recent interval in the set.

Refer to the table below for examples illustrating $\operatorname{LDLP}(\mathrm{i})$ for estimating Trading Interval i when the calculation is performed at time $j$.

| \# | i @ j | LDLP(i) @ j | Purpose of example |
| :---: | :---: | :---: | :---: |
| 1 | 20:30 Fri 03 May 2019 calculated @ 23:59 01 May 2019 | \{20:30 Fri 26 Apr 2019, 20:30 Fri 19 Apr 2019, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019, 20:30 Fri 22 Mar 2019, 20:30 Fri 15 Mar 2019, 20:30 Fri 08 Mar 2019, 20:30 Fri 01 Mar 2019, 20:30 Fri 22 Feb 2019\} | Shows omission of Public Holidays (Good Friday) when i is not a Public Holiday. |
| 2 | 20:30 Fri 03 May 2019 cal- culated @ 00:00 02 May 2019 | \{20:30 Fri 26 Apr 2019, 20:30 Fri 19 Apr 2019, 20:30 Fri 12 Apr 2019, 20:30 Fri 05 Apr 2019, 20:30 Fri 29 Mar 2019\} | Compare with example 1 to show effect of calculating after the Interval Meter Deadline for Trading Month March 2019 on 8 May 2019. |

|  | 13:00 27 Apr 2019 | Thu 28 Mar 2019, 07:30 Thu 21 Mar <br>  |
|  | 2019, 07:30 Thu 14 Mar 2019, 07:30 <br> Thu 07 Mar 2019, 07:30 Thu 28 Feb <br> 2019\} |  |

Purpose of example
Compare with example 3 to show distinction between a Trading Day that is a Public Holiday and a calendar day that is a Public Holiday.

In subsequent sections, $L D L P \_N_{\_} I(n, i)$ will be used as the inputs to functions that expect a single Trading Interval (and not a set of Trading Intervals). The purpose of this variable is to return the interval itself, if data is available, otherwise to return the most recent interval in the set $\operatorname{LDLP}(\mathrm{i})$, for which data exists. This is defined mathematically in the equations below.

$$
L D L P \_N \_I(n, i)= \begin{cases}i & \text { if } i s D a t a_{-} N_{-} I(n, i)=1 \text { or } A f t e r I M D F l a g_{-} G_{-} D(i)=1  \tag{55}\\ L D L P(i)[1] & \text { elseif } i s D a t a_{-} N_{-} I(n, L D L P(i)[1])=1 \\ L D L P(i)[2] & \text { elseif } i s D a t a_{-} N_{-} I(n, L D L P(i)[2])=1 \\ \vdots & \vdots \\ L D L P(i)[j-1] & \text { elseif } i s D a t a_{-} N_{-} I(n, L D L P(i)[j-1])=1 \\ L D L P(i)[j] & \text { otherwise }\end{cases}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| LDLP_N_I(n, i) |  | N | I |  | The interval used to determine scaled <br> meter data for NMI n in Trading Inter- <br> val i | $(55)$ |

| SSF(d) | $\}$ | G | D | 11 | Set of Semi-Scheduled Facilities in <br> Trading Day d | $(15)$ |

## 4 Calculation Engine

AEMO uses the same calculation engine for both settlement and prudentials. Settlement calculations are determined for a Trading Week; however, prudential calculations are determined for each Trading Day. Therefore, the common calculation engine has been implemented on a daily basis, and can then be aggregated to achieve the required settlement outputs.

### 4.1 Invocation

The following table outlines the invocation for the high-level calculations that occur after the metering calculations.

| Variable | Scope Set |
| :--- | :--- |
| TOTAL_P_D(p,d) | $\forall d \in D(w)$ and $\forall p \in P(d)$ |
| $S O M S_{-} G_{-} I(i)$ | N/A |

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| TOTAL_P_D(p, d) | $\$$ | P | D |  | Total settlement amount (including <br> GST and interest) for participant p in <br> Trading Day d | $(62)$ |
| SOMS_G_I(i) | MWh | G | I | 11 | Total Sent Out Generation in Trading <br> Interval i | $(61)$ |
| D(w) | $\}$ | G | W0 |  | Set of Trading Days in Trading Week w | I |

### 4.2 Daily Aggregations

$$
\begin{equation*}
T O T A L_{-} P_{-} D(p, d)=N O I N T_{-} P_{-} D(p, d)+N E T I T_{-} P P_{-} D(p, d) \tag{62}
\end{equation*}
$$

$$
\begin{align*}
N O I N T_{-} P_{-} D(p, d)= & \text { NETSA_P_D(p,d)+SFMFS} A_{-} P_{-} D(p, d)  \tag{63}\\
& +S F R F S A_{-} P P_{-} D(p, d)+S F C F S A_{-} P_{-} D(p, d)+G S T_{-} P P_{-} D(p, d)
\end{align*}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| TOTAL_P_D(p, d) | $\$$ | P | D |  | Total settlement amount (including <br> GST and interest) for participant p in <br> Trading Day d | $(62)$ |
| NOINT_P_D(p, d) | $\$$ | P | D |  | Total settlement amount (including <br> GST, excluding interest) for participant <br> p in Trading Day d | $(63)$ |
| NETINT_P_D(p, d) | $\$$ | P | D |  | Net interest paid/charged to partici- <br> pant p for Trading Day d | $(412)$ |
| NETSA_P_D(p, d) | $\$$ | P | D | 9.6 .3 | Net settlement amount for participant <br> p in Trading Day d | $(64)$ |
| SFMFSA_P_D(p, d) | $\$$ | P | D | 9.13 .2 | Service Fee Settlement Amount paid to <br> AEMO for Trading Day d | $(403)$ |

| STEMSAD_P_D(p, d) | $\$$ | P | D | 9.7 | Settlement amount for energy pur- <br> chased in STEM for participant p in <br> Trading Day d | $(67)$ |

### 4.3.1 STEM Payments and Charges

These equations are based on the equations stated in 9.7. They have been modified to separate quantities into payments and charges.

$$
\begin{align*}
& S T E M S A S_{-} P \_D(p, d)=\sum_{i \in I(d)} S T E M S A S_{-} P_{-} I(p, i)  \tag{66}\\
& S T E M S A D_{-} P \_D(p, d)=\sum_{i \in I(d)} S T E M S A D_{-} P_{-} I(p, i) \tag{67}
\end{align*}
$$

$$
\begin{align*}
& S T E M S A S_{-} P_{-} I(p, i)= \begin{cases}S T E M P_{-} G_{-} I(i) \times S T E M S Q_{-} P_{-} I(p, i) & S S F_{-} G_{-} D(i)=1 \\
0 & S S F_{-} G_{-} D(i)=0\end{cases}  \tag{68}\\
& S T E M S A D_{-} P_{-} I(p, i)= \begin{cases}S T E M P_{-} G_{-} I(i) \times S T E M D Q_{-} P_{-} I(p, i) & S S F_{-} G_{-} D(i)=1 \\
0 & S S F_{-} G_{-} D(i)=0\end{cases} \tag{69}
\end{align*}
$$

$$
\begin{equation*}
S T E M S Q_{-} P_{-} I(p, i)=\max \left(0, S T E M Q_{-} P_{-} I(p, i) \times S S F_{-} G_{-} D(i)\right) \tag{70}
\end{equation*}
$$

$$
\begin{equation*}
S T E M D Q_{-} P_{-} I(p, i)=-\min \left(0, S T E M Q_{-} P_{-} I(p, i) \times S S F_{-} G_{-} D(i)\right) \tag{71}
\end{equation*}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |

### 4.4.2 Energy Uplift Payments

Energy Uplift Payments are made to Market Participants in respect of their Registered Facilities when the marginal offer price at which they are cleared is greater than the Energy Market Clearing Price (defined at the Reference Node),
thereby leaving them out of pocket.

### 4.6 RTM Suspension Compensation

Real-Time Market Suspension Compensation is split into the following parts:

- Market Participant Deficit Amount paid to a Market Participant to cover a shortfall during a suspension.
- Charge to Market Participants to recover the cost of a Market Suspension Deficit Amount.
- Charge to a Market Participant to recover a Market Participant Excess Amount.
- Market Suspension Excess Amount paid to Market Participants to redistribute the excess paid during a suspension.

These equations are based on the equations stated in MR 9.11A.

$$
\begin{align*}
M S C S A_{-} P_{-} D(p, d)= & M P D A_{-} P_{-} D(p, d)-M P E A_{-} P_{-} D(p, d)  \tag{101}\\

### 4.7 Essential System Services

Essential System Services (ESS) encompasses all of Frequency Co-optimised Essential System Services (FCESS) and Non-Co-optimised Essential System Services (NCESS).

Essential System Services is split into the following parts:

- Contingency Raise payments, including SESSM Award payments and refunds
- Contingency Raise charges, including runway share
- Contingency Lower payments and charges
- RoCoF Control Service payments and charges, including Minimum RoCoF Requirement and Additional RoCoF Requirement
- Regulation Raise payments and charges
- Regulation Lower payments and charges
- Regulation Share
- System Restart Service payments and charges
- NCESS payments and charges
- FCESS Uplift payments, including Enablement Losses and FCESS Uplift shares

### 4.7.1.1 SESSM Award Availability Payments

A SESSM Award is granted to a Market Participant in relation to a Facility to provide a specific FCESS.
In the first three years of operation of the market, a SESSM Award Duration is restricted to a maximum of 1 year and a maximum of 3 years thereafter.

A SESSM Award Duration is Trading Day based but may not align with a Trading Week or a Trading Month or a Capacity Year. A SESSM Award Duration is represented in the formulas as a Trading Day range, where the function SArange (sa) is used to return the full time range of the relevant SESSM Award i.e. from Trading Day, to Trading Day.

$$

### 4.7.2.2 Facility Runway Share

This section calculates the facility runway shares for Facilities deemed to be causers of Facility Contingencies. Each Facility is ranked in ascending order of their Facility Risk value and allocated a runway share based on that rank.
$F R S_{-} F_{-} D I(f, d i)=\sum_{r=1}^{F R r a n k_{-} F_{-} D I(f, d i)} \frac{\left(\frac{F R i s k_{-} F_{-} D I(A F[r], d i)-F R i s k_{-} F_{-} D I(A F[r-1], d i)}{L F R_{-} G_{-} D I(d i)}\right)}{M A X r_{-} G_{-} D I(d i)-r+1}$, where $F R i s k_{-} F-D I(A F[0], d i)=0$
$F R r a n k \_F_{-} D I(f, d i)=$ Position of applicable facility $f$ in $A F o r d e r e d \_G_{-} D I(d i)$
$A F o r d e r e d_{-} G_{-} D I(d i)=A F_{-} D I(d i)$ ordered by ascending $F R i s k_{-} F_{-} D I(f, d i)$ and then alphabetically
The expression $A F[r]$ returns the $r$-th element of the set $A F$ ordered_G_DI(di) and the following equation shows the interaction between AFordered_G_DI(di), FRrank_F_DI(f,di) and $A F[r]$ :

$$
\begin{gather*}
A F\left[F R r a n k_{-} F_{-} D I(f, d i)\right]=f  \tag{153}\\
M A X r_{-} G_{-} D I(d i)=\left|A F_{-} D I(d i)\right|  \tag{154}\\
L F R_{-} G_{-} D I(d i)=F R i s k_{-} F_{-} D I\left(A F\left[M A X_{-} G_{-} D I(d i)\right], d i\right)  \tag{155}\\
A F_{-} D I(d i)=\left\{f \in A p p 2 A F_{-} D I(d i): F R i s k_{-} F_{-} D I(f, d i) \geq 10 M W\right\} \tag{156}
\end{gather*}
$$

$$
\begin{equation*}
\text { AFadditional_DI }(d i)=\left\{f \in A_{-} p 2_{2} A I M L_{-} D I(d i): F R i s k_{-} F_{-} D I(f, d i) \geq 10 M W\right\} \tag{157}
\end{equation*}
$$

$$
\begin{align*}
& \text { FRisk_F_DI(f,di) } \\
& = \begin{cases}F R_{-} F-D I(f, d i) & \text { for } f \in A p p 2 A I M L_{-} D I(d i) \cup A p p 2 A F a(d i) \cup A p p 2 A F b \_D I(d i) \\
\frac{S C A D A I M L_{-} F \_D I(f, d i-1)}{5 / 60 h} & \text { for } f \in A p p 2 A F c_{-} D I(d i) \\
0 & \text { otherwise }\end{cases} \tag{158}
\end{align*}
$$

Identify which facilities will be included for the purposes of cost allocation:

$$
\begin{gather*}
A p p 2 A I M L_{-} D I(d i)=A p p 2 A F b c(d) \cap \overline{A p p 2 A F \_D I(d i)}  \tag{159}\\
A p p 2 A F \_D I(d i)=A p p 2 A F a(d i) \cup A p p 2 A F b \_D I(d i) \cup A p p 2 A F c_{-} D I(d i)  \tag{160}\\
A p p 2 A F a(d)=(S F(d) \cup S S F(d)) \cap \overline{E G(d)}  \tag{161}\\
A p p 2 A F b c(d)=((S F(d) \cup S S F(d) \cup N S F(d)) \cap E G(d)) \cup I M L(d)  \tag{162}\\
A p p 2 A F b_{-} D I(d i)=A p p 2 A F b c(d) \cap \overline{A p p 2 A F c_{-} D I(d i)} \tag{163}
\end{gather*}
$$

### 4.7.2.3 Network Runway Share

This section calculates the Network Contingency runway shares for Registered Facilities deemed to be causers of Network Contingencies. Each Registered Facility that is a member of the set of causer facilities is ranked in ascending
order of their Facility Risk value and allocated a runway share based on that rank.
$N R S \_F N C \_D I(f, n c, d i)$
$N R r a n k \_F N C_{-} D I(f, n c, d i)=$ Position of Facility $f$ in CFordered_NC_DI(nc,di)
$C F$ ordered_NC_DI(nc, $d i)=C F_{-} N C_{-} D I(n c, d i)$ ordered by ascending $F R i s k_{-} F{ }_{-} D I(f, d i)$ and then alphabetically

The expression $C F[r]$ returns the $r$-th element of the set $C$ Fordered_NC_DI(nc, di) and the following equation shows the interaction between CFordered_NC_DI(nc, di), NRrank_FNC_DI $(f, n c, d i)$ and $C F[r]$ :

$$
\begin{gather*}
C F\left[N R_{r a n k}^{-} F N_{-} D I(f, n c, d i)\right]=f  \tag{167}\\
M A X r_{-} N C_{-} D I(n c, d i)=\left|C F_{-} N C_{-} D I(n c, d i)\right|  \tag{168}\\
L F R_{-} N C_{\_} D I(n c, d i)=F R i s k_{-} F_{-} D I\left(C F\left[M A X r_{-} N C_{-} D I(n c, d i)\right], d i\right)  \tag{169}\\
C F_{-} N C_{-} D I(n c, d i)=\left\{f \in F_{-} N C_{-} D I(n c, d i) \cap\left(A F_{-} D I(d i) \cup A F a d d i t i o n a l \_D I(d i)\right)\right\} \tag{170}
\end{gather*}
$$

### 4.7.2.4 RTM Suspension Share

When the Real-Time Market is suspended, the Central Dispatch Process is not available to determine the Facility Risk and Network Risks which input to the runway share determined in Appendix 2A. Instead, the contribution share for Contingency Reserve Raise is calculated using the Metered Schedules for Facilities with injection greater than 10MW in the Dispatch Interval.

$$
\begin{gather*}
R T M S u s p S h a r e_{-} P_{-} D I(p, d i)=\frac{R T M S u s p C_{-} P_{-} D I(p, d i)}{R T M S u s p C Q_{-} G_{-} D I(d i)}  \tag{171}\\

### 4.7.16 FCESS Uplift Payments

FCESS Uplift Payments are made to Market Participants in respect of their Registered Facilities in specific circumstances where a generator may be required to run to provide a FCESS but would not otherwise be required for energy.

The cost of FCESS Uplift Payments is allocated according to the causer pays principle for the relevant FCESS.

$$

### 4.7.17 FCESS Enablement Losses

Enablement Losses are calculated for a Registered Facility in respect of each individual FCESS. Only Scheduled Facilities and Semi-Scheduled Facilities are eligible for FCESS Uplift payments. For an eligible Registered Facility, the Enablement Losses are the difference between its marginal energy offer price and the market clearing price for energy, multiplied by the highest Enablement Minimum for any FCESS that it is enabled to provide in that Dispatch Interval, with adjustments for Loss Factors.

### 4.7.17.1 Contingency Reserve Raise Enablement Losses

### 4.8 Reserve Capacity

Reserve Capacity is split into the following parts:

- Capacity Payments - Payment to Market Participants for unallocated Capacity Credits.
- Capacity Credit Over-allocations Payment - Payment to Market Participants for receiving more Capacity Credit Allocations than its IRCR.
- Supplementary Capacity Payments - Payment to Market Participants associated with a Supplementary Capacity Contract.
- TRCC Charges - Charge to Market Participants to fund the cost of Capacity up to the Reserve Capacity Requirement.
- SRCC Charges - Charge to Market Participants to fund the payment of Capacity in excess of the Reserve Capacity Requirement.
- Capacity Cost Refund - Charge to Market Participants resulting from failure to meet obligations relating to Capacity Credits.
- Intermittent Load Refunds - Charge to Market Participants for Intermittent Load Refunds.

### 4.8.3.1 Targeted Reserve Capacity Cost

MR 4.28.1(a) outlines the Targeted Reserve Capacity Cost as the cost of Capacity Credits acquired by AEMO (not traded bilaterally through a Capacity Credit Allocation) to just meet the Reserve Capacity Requirement. To implement this the following steps are followed.

Step 1: Determine how many Capacity Credits need to be acquired by AEMO to just meet the Reserve Capacity Requirement.

$$
\begin{align*}
& C C_{-} G_{-} D(d)=\sum_{f \in C C F(d)} C C_{-} F_{-} D(f, d)  \tag{306}\\
& C C A R_{-} G_{-} D(d)=\sum_{p \in P(d)} C C A R_{-} P{ }_{-} D(p, d)  \tag{307}\\
& C C A O A_{-} G_{-} D(d)=\sum_{p \in P(d)} C C A O A_{-} P_{-} D(p, d) \tag{308}
\end{align*}
$$

Step 2: Identify the set of all Capacity Credits acquired by AEMO and order them by descending price.

$$
\begin{align*}
C C T R C C \_G_{-} D(d) & =\{t: T 2 P(t) \in P(d) \text { or } T 2 F(t)) \in C C F(d)\} \\
& \text { ordered by descending } C C P-T-D(t, d) \text { and then alphabetically, where } t \in C C T R C C_{-} G_{-} D(d) \tag{309}
\end{align*}
$$

$$
\begin{gather*}
C C P_{-} T_{-} D(t, d)= \begin{cases}E A_{-} P_{-} D(t, d) & \text { for } t \in P(d) \\
R C P_{-} F_{-} D(T 2 F(t), d) & \text { for } t \in C C F(d)\end{cases}  \tag{310}\\
C C Q_{-} T_{-} D(t, d)= \begin{cases}C C A A_{-} P_{-} D(t, d) & \text { for } t \in P(d) \\
C C_{-} F_{-} D(t, d)-C C A M_{-} F_{-} D(t, d) & \text { for } t \in C C F(d)\end{cases} \tag{311}
\end{gather*}
$$

$$
\begin{equation*}
T R C C r a n k_{-} T_{-} D(t, d)=\text { Position of price-quantity pair } t \text { in } C C T R C C_{-} G_{-} D(d) \tag{312}
\end{equation*}
$$

Step 3: Determine the cost of Capacity Credits acquired by AEMO to just meet the Reserve Capacity Target.

$$
\begin{align*}
& T R C C_{-} G_{-} D(d) \\
& =\sum_{t \in C C T R C C_{-} G_{-} D} C C P_{-} T_{-} D(t, d) \times \min \left(C C Q_{-} T_{-} D(t, d), \max \left(0, T R C C Q_{-} G_{-} D(d)-C C C Q_{-} T_{-} D(t, d)\right)\right) \tag{313}
\end{align*}
$$

### 4.8.5.2 Refund Caps

The calculations of $M A X F R_{-} F_{-} C Y, M A X G R_{-} P P_{-} C Y$ and $M A X P G R_{-} P{ }_{-} C Y$ require calculations for all Trading Days in the Capacity Year. This is important to note as very few other calculations require this forward-looking calculation. In order to perform this forward-looking calculation, the following assumptions are made for future Trading Days:

- $C C_{-} F_{-} D(f, d+1)=C C_{-} F_{-} D(f, d)$
- The Facility remains registered to the current Market Participant for the remainder of the Capacity Year.

$$
\begin{align*}
& M A X P G R_{-} P \_C Y(p, c y)=\sum_{d \in D_{-} C Y(c y)} M A X P G R_{-} P P_{-} D(p, d)  \tag{334}\\
& M A X P G R_{-} P \_D(p, d)= \sum_{f \in S F(p, d) \cup S S F(p, d) \cup N S F(p, d) \cup i n d S F(p, d) \cup i n d S S F(p, d) \cup i n d N S F(p, d)} M A X F R_{-} F-D(f, d)  \tag{335}\\
& M A X F R_{-} F_{-} C Y(f, c y)=  \tag{336}\\
& \sum_{d \in D_{-} C Y(c y)} M A X F R_{-} F F_{-} D(f, d) \\
& M A X F R_{-} F F_{-} D(f, d)=C_{-} F-D(f, d) \times R C P P_{-} F(f, d)
\end{align*}
$$

### 4.9 Market Participant Fees

Fees are split into the following parts:

- Market Fees
- Regulator Fees
- Coordinator Fees

The corresponding payment made to AEMO, the ERA and the Coordinator are included in a separate chapter titled Service Fees.
These equations are based on the equations stated in MR 9.12.

$$
\begin{equation*}
M P F S A_{-} P \_D(p, d)=-\left(M P M F S A_{-} P_{-} D(p, d)+M P R F S A_{-} P_{-} D(p, d)+M P C F S A_{-} P P_{-} D(p, d)\right) \tag{397}
\end{equation*}
$$

### 4.10 Service Fees

Fees are split into the following parts:

- Market Fees
- Regulator Fees
- Coordinator Fees

The corresponding charges to Market Participants are included in a separate section titled Market Participant Fees. These equations are based on the equations stated in MR 9.13.

### 4.10.1 Market Fee Payments

$$
S F M F S A_{-} P P_{-} D(p, d)= \begin{cases}\sum_{p \in P(d)} M P M F S A_{-} P-D(p, d) & \text { for } p \in \operatorname{AEMO}(i)  \tag{403}\\ 0 & \text { for } p \notin A E M O(i)\end{cases}

### 4.11 Default Levy Adjustment

By the end of the second month following the end of a Financial Year, AEMO must re-allocate any Default Levies raised during that Financial Year.

Default Levy Adjustment is split into two parts:

- Payment to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.
- Charge to a Participant for re-allocation of Default Levies raised during the most recently ended Financial Year.

$$
\begin{equation*}
D L A S A_{-} P_{-} D(p, d)=D L A P_{-} P_{-} D(p, d)-D L A C_{-} P_{-} D(p, d) \tag{406}
\end{equation*}
$$

$$
\begin{equation*}
D L A P_{-} P_{-} D(p, d)=\frac{\max \left(0, D L A_{-} P_{-} W(p, w)\right)}{7} \tag{407}
\end{equation*}
$$

$$
\begin{equation*}
D L A C_{-} P_{-} D(p, d)=\frac{-\min \left(0, D L A_{-} P_{-} W(p, w)\right)}{7} \tag{408}
\end{equation*}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

| DLA_P_W(p, w) | $\$$ | P | W0 |  | The Default Levy adjustment (includ- <br> ing GST) to put participant p in the po- <br> sition it would have been in had it paid <br> the amount determined under clause | I |
| 9.20.11(b) instead of the amounts actu- <br> ally paid under clause 9.20.8 applicable <br> in Trading Week w |  |  |  |  |  |  |

### 4.12 GST

GST is charged for the provision of eligible goods and services. The Variable Categorisation section outlines which statement summary variables (of Trading Day granularity) have GST applied and which are exempt. The intervalequivalent variables are identified in the sets used in the equations below.

$$
\begin{gather*}
G S T_{-} P_{-} D(p, d)=G S T P_{-} P_{-} D(p, d)-G S T C_{-} P_{-} D(p, d)  \tag{409}\\
G S T P_{-} P P_{-} D(p, d)=G S T_{-} G_{-} D(d) \times \sum_{v \in P G S T(d)} v(p, d)  \tag{410}\\
G S T C_{-} P-D(p, d)=G S T_{-} G_{-} D(d) \times \sum_{v \in C G S T(d)} v(p, d) \tag{411}
\end{gather*}
$$

### 4.13 Interest

Interest is paid/charged in the WEM for two reasons:

- Interest paid/charged as part of the Adjustment Process [MR 9.1.3]
- Interest paid on security deposits [MR 2.38.5, 4.13.6, 4.13.14, 4.13A.13, and 4.13A.19]

The payment of interest on security deposits is handled separate to that outlined in this formulation.

$$
\begin{gather*}
N E T I N T T_{-} D(p, d)=I N T P_{-} P_{-} D(p, d)-I N T C_{-} P_{-} D(p, d)  \tag{412}\\
I N T P_{-} P_{-} D(p, d)=\max \left(0, I N T P_{-} D(p, d)\right)  \tag{413}\\
I N T C_{-} P_{-} D(p, d)=-\min \left(0, I N T_{-} P_{-} D(p, d)\right) \tag{414}
\end{gather*}
$$

$$
\begin{equation*}
I N T T_{-} P D(p, d)=I N T 1_{-} P P_{-} D(p, d)+I N T 2_{-} P_{-} D(p, d)+I N T 3_{-} P{ }_{-} D(p, d) \tag{415}
\end{equation*}
$$

$I N T 3_{-} P_{-} D(p, d)= \begin{cases}\left(N O I N T_{-} P P_{-} D(p, d)-N O I N T 2_{-} P P_{-} D(p, d)\right) & \text { for Adj3NULLFlag_G-W(d)=1} \begin{array}{ll} & \text { and Adj2NULLFlag_} G_{-} W(d)=0 \\ \times \sum_{j \in I N T D A Y S 3(d)} \frac{B B R_{-} G_{-} D(j)}{365} & \\ \left(N O I N T 3_{-} P-D(p, d)-N O I N T 2_{-} P-D(p, d)\right) & \text { otherwise } \\ \times \sum_{j \in I N T D A Y S 3(d)} \frac{B B R_{-} G_{-} D(j)}{365} & \end{array} .\end{cases}$

### 4.14 Estimation

Prudential calculations require the estimation of exposure before all inputs are known.
When estimating settlement data for prudentials, AEMO does not modify settlement equations, but instead estimates inputs which are not known at the time of calculation. This section details the methodology for estimating nonmetering settlement inputs (refer to Section 3.3 for the methodology for estimating metering inputs).

When undertaking a settlement run, no inputs are estimated, as required under the rules.

$$

## 5 Payments and Charges

Payments refer to amounts that are paid by AEMO to the participant and charges refer to amounts that are paid by the participant to AEMO. Each of these amounts may change between positive and negative values as a result of the Adjustment Process.

### 5.1 Variable Categorisation

The table below outlines the variables that are payments (' P ') or charges (' C '), whether GST is applicable ('Y' or ' N '), and the description of the line item as it appears on the Invoice.

| Variable | P/C | GST | Rule | Ref | Invoice line item description |
| :---: | :---: | :---: | :---: | :---: | :---: |
| STEMSAS_P_D(p, d) | P | Y | 9.7 | (66) | Payment for STEM energy sold |
| STEMSAD_P_D(p, d) | C | Y | 9.7 | (67) | Charge for STEM energy purchased |
| ETSA_P_D $\mathrm{p}, \mathrm{d}$ ) | P | Y |  | (73) | Payment for Real-Time Market energy sold |
| ETDA_P_D(p, d) | C | Y |  | (74) | Charge for Real-Time Market energy purchased |
| EUP_P_D $\mathrm{p}, \mathrm{d}$ ) | P | Y |  | (81) | Payment for Energy Uplift Payments |
| EUR_P_D $\mathrm{p}, \mathrm{d}$ ) | C | Y |  | (89) | Charge for Energy Uplift Payments |
| OCP_P_D $(\mathrm{p}, \mathrm{d})$ | P | Y | 9.11 .3 | (96) | Payment for Outage Compensation |
| OCR_P_D $\mathrm{p}, \mathrm{d}$ ) | C | Y | 9.11 .6 | (98) | Charge for Outage Compensation |
| MPDA_P_D $(\mathrm{p}, \mathrm{d})$ | P | Y | 9.11 A .4 | (102) | Payment for Market Participant Deficit Amount |
| MPEA_P_D $\mathrm{p}, \mathrm{d}$ ) | C | Y | 9.11 A .5 | (106) | Charge for Market Participant Excess Amount |
| MSEArebate_P_D(p, d) | P | Y | 9.11 A .9 | (103) | Payment for market suspension excess amount |
| MSDAcharge_P_D(p, d) | C | Y | 9.11 A .6 | (107) | Charge for market suspension deficit amount |
| CRpayment_P_D(p, d) | P | Y | 9.10 .4 | (113) | Payment for Contingency Reserve Raise |
| CLpayment_P_D(p, d) | P | Y | 9.10 .8 | (175) | Charge for Contingency Reserve Raise |
| RoCoFpayment_P_D(p, d) | P | Y | 9.10 .12 | (188) | Payment for RoCoF Control Service |
| RRpayment_P_D(p, d) | P | Y |  | (224) | Payment for Regulation Raise |
| RLpayment_P_D(p, d) | P | Y |  | (240) | Payment for Regulation Lower |
| SRSpayment_P_D(p, d) | P | Y | 9.10.25 | (253) | Payment for System Restart Service |
| NCESSpayment_P_D(p, d) | P | Y | 9.10 .27 A | (261) | Payment for NCESS |
| FCESSUpayment_P_D(p,d) | P | Y | 9.10 .27 E | (264) | Payment for FCESS Uplift Payments |
| CRcharge_P_D(p, d) | C | Y | 9.10 .29 | (136) | Charge for Contingency Reserve Raise |
| CLcharge_P_D(p, d) | C | Y | 9.10 .31 | (183) | Charge for Contingency Reserve Lower |
| RoCoFcharge_P_D(p, d) | C | Y | 9.10.33 | (196) | Charge for RoCoF Control Service |
| RRcharge_P_D(p, d) | C | Y |  | (232) | Charge for Regulation Raise |
| RLcharge_P_D p , d) | C | Y |  | (248) | Charge for Regulation Lower |
| SRScharge_P_D(p, d) | C | Y | 9.10 .40 | (255) | Charge for System Restart Service |
| NCESScharge_P_D(p, d) | C | Y | 9.10.44 | (261) | Charge for NCESS |
| CCSA_P_D $(\mathrm{p}, \mathrm{d})$ | P | Y | 9.8.3(b) | (293) | Payment for non-allocated Capacity Credits |
| IMLR_P_D $(\mathrm{p}, \mathrm{d})$ | C | Y | $4.29 .3(\mathrm{dA})$ | (395) | Charge for Intermittent Load Refunds |
| SUPCAPSA_P_D(p, d) | P | Y | 9.8.3(d) | I | Payment for Supplementary Capacity Contracts |
| CCR_P_D ${ }^{\text {p, d) }}$ | C | Y | 4.6.2E | (326) | Charge for Capacity Cost Refund |
| CCAOASA_P_D(p, d) | P | Y | 9.8.3(f) | (296) | Payment for Capacity Credit Allocation over-allocation |
| TRCC_P_D(p, d) | C | Y | 9.8.4(a) | (300) | Charge for Targeted Reserve Capacity Cost |
| SRCC_P_D $(\mathrm{p}, \mathrm{d})$ | C | Y | 9.8.4(b) | (315) | Charge for Shared Reserve Capacity Cost |
| MPMFSA_P_D(p, d) | C | N | 9.12 .3 | (398) | Charge for Market Participant Market Fees |
| MPRFSA_P_D $(\mathrm{p}, \mathrm{d})$ | C | N | 9.12 .4 | (401) | Charge for Market Participant Regulator Fees |
| MPCFSA_P_D $(\mathrm{p}, \mathrm{d})$ | C | N | 9.12 .4 A | (402) | Charge for Market Participant Coordinator Fees |
| SFMFSA_P_D(p, d) | P | N | 9.13 .2 | (403) | Payment for Service Fee Market Fees |
| SFRFSA_P_D $(\mathrm{p}, \mathrm{d})$ | P | N | 9.13 .3 | (404) | Payment for Service Fee Regulator Fees |
| SFCFSA_P_D(p, d) | P | N | 9.13 .4 | (405) | Payment for Service Fee Coordinator Fees |
| DLAP_P_D $(\mathrm{p}, \mathrm{d})$ | P | N | 9.20.11(e) | (407) | Payment for reallocation of Default Levies |
| DLAC_P_D(p, d) | C | N | $9.20 .11(\mathrm{e})$ | (408) | Charge for reallocation of Default Levies |
| GSTP_P_D $(\mathrm{p}, \mathrm{d})$ | P | N | 9.1.3 | (410) | Payment for GST |
| GSTC_P_D $\mathrm{p}, \mathrm{d})$ | C | N | 9.1.3 | (411) | Charge for GST |
| INTP_P_D(p, d) | P | N |  | (413) | Payment for Interest |
| INTC_P_D(p, d) | C | N |  | (414) | Charge for Interest |

### 5.2 Zero Sum Groups

The table below assists in understanding how the payments and charges are related. The only non-zero sum component within the settlement summary variables is when AEMO is required to draw down on Reserve Capacity security or DSP Reserve Capacity Security, which are represented by $R C S D_{-} G_{-} D(d)$ and $D S P R C S D_{-} G_{-} D(d)$, respectively

| Category | Payments | $=$ | Charges |
| :---: | :---: | :---: | :---: |
| STEM | STEMSAS_G_D(d) | $=$ | STEMSAD_G_D(d) |
| Energy | ETSA_G_D(d) | $=$ | ETDA_G_D(d) |
| Energy Uplifts | EUP_G_D(d) | $=$ | EUR_G_D(d) |
| Changed Outage Compensation | OCP_G_D(d) | $=$ | OCR_G_D(d) |
| Market Suspension Excess | MSEArebate_G_D(d) | = | MPEA_G_D(d) |
| Market Suspension Deficit | MPDA_G_D(d) | $=$ | MSDAcharge_G_D(d) |
| Essential System Services | CRpayment_G_D(d) + <br> CLpayment_G_D(d) + <br> RRpayment_G_D(d) + <br> RLpayment_G_D(d) + <br> RoCoFpayment_G_D(d) + <br> SRSpayment_G_D(d) + <br> NCESSpayment_G_D(d) + <br> FCESSUpayment_G_D(d) | $=$ | CRcharge_G_D(d) + CLcharge_G_D(d) + RRcharge_G_D(d) + RLcharge_G_D(d) + RoCoFcharge_G_D(d) + SRScharge_G_D(d) + NCESScharge_G_D(d) |
| Reserve Capacity | $\begin{aligned} & \text { CCSA_G_D(d) + } \\ & \text { CCAOASA_G_D(d) + } \\ & \text { SUPCAPSA_G_D(d) } \end{aligned}$ | $=$ | TRCC_G_D(d) + SRCC_G_D(d) + IMLR_G_D(d) + RCSD_G_D(d) + DSPRCSD_G_D(d) + CCR_G_D(d) |
| Market Fees | SFMFSA_G_D(d) | = | MPMFSA_G_D(d) |
| Regulator Fees | SFRFSA_G_D(d) | = | MPRFSA_G_D(d) |
| Coordinator Fees | SFCFSA_G_D(d) | $=$ | MPCFSA_G_D(d) |
| Default Levy Adjustments | DLAP_G_D(d) | $=$ | DLAC_G_D(d) |
| GST | GSTP_G_D(d) | $=$ | GSTC_G_D(d) |
| Interest | INTP_G_D(d) | $=$ | INTC_G_D(d) |

## 6 Settlements

Daily outputs from the common calculation engine may be aggregated by the participant to achieve the required settlement outputs.

### 6.1 Weekly Settlement Amount

$$
\begin{equation*}
T O T A L_{-} P \_W(p, w)=\sum_{d \in D(w)} T O T A L_{-} P P_{-} D(p, d) \tag{424}
\end{equation*}
$$

$\left.\begin{array}{|l|l|l|l|l|l|l|}\hline \text { Variable } & \text { Units } & \text { SC } & \text { GR } & \text { Rule } & \text { Description } & \text { Ref } \\ \hline \text { TOTAL_P_W(p, w) } & \$ & \text { P } & \text { W0 } & & \begin{array}{l}\text { Total settlement amount (including } \\ \text { GST and interest) for participant p in } \\ \text { Trading Week w }\end{array} & (424) \\ \hline \text { TOTAL_P_D(p, d) } & \$ & \text { P } & \text { D } & & \begin{array}{l}\text { Total settlement amount (including } \\ \text { GST and interest) for participant p in } \\ \text { Trading Day d }\end{array} & \text { (62) }\end{array}\right\}$

## 7 Prudentials

Trading Margin calculations are performed on a daily basis to manage prudential risk. An input to these equations are the outputs of the settlement calculations documented in previous sections.

### 7.1 Trading Margin

$$
\begin{gather*}
T M_{-} P_{-} D(p, d)=T L_{-} P-D(p, d)-O A_{-} P_{-} D(p, d)  \tag{425}\\
T L_{-} P P_{-} D(p, d)=P F_{-} G_{-} D(d) \times C R E D S U_{-} P_{-} D(p, d)  \tag{426}\\
P F_{-} G_{-} D(d)=0.87  \tag{427}\\
O A_{-} P_{-} D(p, d)=C E E_{-} P_{-} D(p, d)+I N P_{-} P P_{-} D(p, d)-P P_{-} P-D(p, d)  \tag{428}\\
C E E_{-} P P_{-} D(p, d)=\sum_{j \in E X P D A Y S(d)} E E_{-} P P_{-} D(p, j) \tag{429}
\end{gather*}
$$

$$
\begin{equation*}
E E_{-} P \_D(p, d)=-\left(T O T A L_{-} P \_D(p, d)-T O T A L p r e v_{-} P \_D(p, d)\right) \tag{430}
\end{equation*}
$$

| Variable | Units | SC | GR | Rule | Description | Ref |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
