

2022 Reserve Capacity Information Pack

June 2022

A report for the Wholesale
Electricity Market

Important notice

Purpose

AEMO publishes this 2022 Reserve Capacity Information Pack under clauses 4.1.10 and 4.7.2 of the Wholesale Electricity Market Rules (WEM Rules).

This publication has been prepared by AEMO using information published in the 2022 WEM Electricity Statement of Opportunities¹.

Disclaimer

This document or the information in it may be subsequently updated or amended. This document does not constitute legal or business advice, and should not be relied on as a substitute for obtaining detailed advice about the Wholesale Electricity Market Rules, or any other applicable laws, procedures or policies. AEMO has made every effort to ensure the quality of the information in this document but cannot guarantee its accuracy or completeness.

Accordingly, to the maximum extent permitted by law, AEMO and its officers, employees and consultants involved in the preparation of this document:

- make no representation or warranty, express or implied, as to the currency, accuracy, reliability or completeness of the information in this document; and
- are not liable (whether by reason of negligence or otherwise) for any statements or representations in this document, or any omissions from it, or for any use or reliance on the information in it.

1 Background

Each year, AEMO must publish the Reserve Capacity Information Pack under clauses 4.1.10 and 4.7.2 of the Wholesale Electricity Market Rules (WEM Rules) for the South West Interconnected System (SWIS) in Western Australia.

This Reserve Capacity Information Pack relates to the 2022 Reserve Capacity Cycle and includes the Reserve Capacity Requirement (RCR)² for the 2024-25 Capacity Year³, as published in the 2022 WEM Electricity Statement of Opportunities (ESOO).

The 2022 WEM ESOO⁴ provides detailed information on:

- AEMO's 2022 Long Term Projected Assessment of System Adequacy (PASA) for the SWIS over the 10-year Long Term PASA Study Horizon for the 2022-23 to 2031-32 Capacity Years.
- The Availability Classes and Availability Curve developed for the 2024-25 Capacity Year.

Please direct any questions about the 2022 WEM ESOO or this Reserve Capacity Information Pack to AEMO's Reserve Capacity team on (08) 9469 9800 or wa.capacity@aemo.com.au.

2 Reserve Capacity Requirement

The RCR for the 2024-25 Capacity Year is **4,526 MW**.

3 Availability Classes

Certified Reserve Capacity (CRC) is classified into two classes based on capacity availability⁵:

- **Availability Class 1:** relates to all generation capacity⁶, and any other capacity that is expected to be available for dispatch for all Trading Intervals, allowing for outages or other restrictions on availability.

² The RCR (determined under clause 4.6.1 of the WEM Rules) is the Reserve Capacity Target (RCT) for the Capacity Year commencing on 1 October of Year 3 of a Reserve Capacity Cycle as reported in the Statement of Opportunities Report for that Reserve Capacity Cycle. The RCT for a specific Capacity Year (determined under clause 4.5.10(b) of the WEM Rules) is AEMO's estimate of the total amount of generation or Demand Side Management capacity required in the SWIS to satisfy the Planning Criterion under clause 4.5.9 of the WEM Rules for that Capacity Year.

³ A Capacity Year commences at the start of Trading Interval 08:00 on 1 October and ends at the end of Trading Interval 07:30 on 1 October of the following calendar year. All data in this 2022 Reserve Capacity Information Pack is based on Capacity Years unless otherwise specified.

⁴ Available at <https://www.aemo.com.au/Electricity/Wholesale-Electricity-Market-WEM/Planning-and-forecasting/WEM-Electricity-Statement-of-Opportunities>.

⁵ See clause 4.11.4 and the definitions of "Availability Class 1" and "Availability Class 2" in Chapter 11 of the WEM Rules.

⁶ Hybrid Facilities that include both generation and Electric Storage Resource (ESR) capacity are considered to be in Availability Class 1. Amendments to the WEM Rules were gazetted in December 2020 to provide for the participation of ESR capacity under the RCM. See <https://www.erawa.com.au/cproot/21670/2/Wholesale-Electricity-Market-Amendment-Tranches-2-and-3-Amendments-Rules-2020.pdf>.

- **Availability Class 2:** relates to capacity that is not expected to be available for dispatch for all Trading Intervals.

From the 2023-24 Capacity Year onwards, stand-alone Electric Storage Resources (ESR) have been included in the modelling of Availability Classes. ESR are included in Availability Class 2, as they are only required to make capacity available during the Electric Storage Resource Obligation Intervals (ESROIs)⁷.

The 2022 Long Term PASA determined the minimum capacity required to be provided by Availability Class 1 capacity for the 2024-25 Capacity Year. The Availability Class 2 capacity allowance is equal to the RCR less the Availability Class 1 requirement. Capacity shortfalls occur when:

- Availability Class 1 capacity is less than the minimum Availability Class 1 capacity requirement.
- Availability Class 1 and Availability Class 2 capacity is less than the RCR.

The minimum Availability Class 1 capacity requirement and the capacity associated with Availability Class 2 for the 2024-25 Capacity Year is outlined in Table 1.

Table 1 Availability Classes for the 2024-25 Capacity Year

	2024-25 (MW)
Minimum capacity required to be provided by Availability Class 1	3,891
Capacity associated with Availability Class 2	635
RCR	4,526

4 Availability Curve

The Availability Curve⁸ is a two-dimensional duration curve of the forecast minimum capacity requirement for each Trading Interval over a Capacity Year.

The minimum capacity requirement for each Trading Interval is calculated as the sum of the forecast demand for that Trading Interval and the difference⁹ between the Reserve Capacity Target (RCT) for the Capacity Year and the maximum of the forecast demand for the Trading Intervals in the Capacity Year.

The 2022 Long Term PASA study developed the Availability Curve for the 2024-25 Capacity Year, as shown in Figure 1.

⁷ The 2022 WEM ESOO modelling assumes that ESR is required to be available between 16:30 and 20:30 each Trading Day, as these times generally coincide with peak demand.

⁸ The Availability Curve (defined in clause 4.5.10(e) of the WEM Rules) shows how demand changes over a Capacity Year, with demand on the vertical axis and time on the horizontal axis. It can be used to determine the number of hours when the capacity requirement exceeds a given level of demand.

⁹ This difference between the RCT and the maximum forecast demand can be calculated as the sum of the reserve margin, Intermittent Load allowance, and the Load Following Ancillary Service (LFAS) capacity requirement.

5 Expressions of Interest (EOI)

The Request for EOI window for the 2022 Reserve Capacity Cycle opened on 10 January 2022 and closed on 9 May 2022¹⁰. AEMO invited EOIs from project proponents with new Energy Producing Systems¹¹ and Demand Side Management capacity who are seeking Certified Reserve Capacity and Capacity Credits for the 2024-25 Capacity Year. A project proponent must submit an EOI to be eligible to seek certification of Reserve Capacity under section 4.8 of the WEM Rules for any new capacity, which includes an upgrade of a Facility.

The 2022 EOI Summary Report will be published on 30 June 2022 and will be available on AEMO’s website¹².

¹⁰ The 2022 Reserve Capacity timetable can be found at https://aemo.com.au/-/media/files/electricity/wem/reserve_capacity_mechanism/timetable/2022-reserve-capacity-cycle-timetable.pdf?la=en.

¹¹ The Wholesale Electricity Market Amendment (Tranches 2 and 3 Amendments) Rules 2020 include amending rules with respect to Energy Producing Systems. An Energy Producing System is defined as: “Set of one or more electricity producing resources or devices such as generation systems or Electric Storage Resources”. This definition currently has legal effect under the transitional rule specified in clause 1.36C.6 of the WEM Rules.
