Important notice

Purpose

Under clause 7.2.7 of the ESM Rules, AEMO must as soon as practicable after the end of each quarter, publish on the WEM Website a report summarising the total number, frequency and type of Constraints that were relaxed under clause 7.2.6 during that quarter.

Relaxed Constraints

1.1 Introduction

Under clause 7.2.6 of the Electricity System and Market (ESM) Rules, AEMO may "relax" Constraints used in the Central Dispatch Process in order to resolve infeasible dispatch solutions. If the WEM Dispatch Engine (WEMDE) is not able find a feasible solution, it determines which Constraints to relax¹ and by how much using the concept of Constraint Violation Penalty (CVP²), whereby the cost of relaxing a Constraint depends on its associated CVP value.

Under clause 7.2.7(b) of the ESM Rules, AEMO must as soon as practicable after the end of each quarter, publish on the WEM Website a report summarising the total number, frequency and type of Constraints that were relaxed under clause 7.2.6 during that quarter.

1.2 Summary of relaxed Constraints

Table 1 shows the breakdown of relaxed constraints by category and trading month. Note that a constraint that was relaxed in multiple intervals has been counted multiple times.

Constraint Type	Description	April	Мау	June	Total
Ramp Up	Formulation ³ Constraint used to limit Facility ramping. See section 2.4.13 of <u>WEM Procedure:</u> <u>Dispatch Algorithm Formulation</u> .	4261	4467	89	8817
Minimum Enablement for ESS (Essential System Services)	Formulation Constraint used to prevent a Facility being dispatch below its ESS Enablement Minimum value. See section 2.2.15 of <u>WEM</u> <u>Procedure: Dispatch Algorithm Formulation</u> .	36	22	42	100
Defined Contingency	Non-formulation constraints of type "Facility Risk" or "Network Risk" used to calculate the Largest Credible Supply Contingency. See section 2.4.8 of <u>WEM Procedure: Dispatch Algorithm</u> Formulation.	0	0	0	0
Network Constraint	Non-formulation constraints of type "Network". These Constraint Equations correspond to a Network Limit. See ESM Rule 7.2.4(e).	146	21	34	201
Other	Non-formulation constraints of type "Other". These Constraint Equations are used to meet Power System Security and Power System Reliability requirements, that do not form part of the above categories. See ESM Rule 7.2.4(f).	8	1	0	9
Total		4451	4511	165	9127

Table 1 – Breakdown of category and trading month of relaxed Constraints for Q2 of 2025

¹ In the context of the WEM Dispatch Engine, relaxed Constraints are also called violating Constraints.

² For more information about Constraint Violation Penalties see <u>WEM Procedure: Dispatch Algorithm Formulation</u>

³ Formulation constraints are included in the formulation of the Dispatch Algorithm (see <u>WEM Procedure: WEM Dispatch Algorithm Formulation</u>) and hence do not form part of the Constraints Library.

AEMO acknowledges the Traditional Owners of country throughout Australia and recognises their continuing connection to land, waters and culture. We pay respect to Elders past and present.

Table 2 contains a summary of the number of Primary Dispatch Intervals in which Constraints were relaxed.

N	0	1	2	3	4	5	6	7	8	9	10	>10
Number of Primary Dispatch Intervals with N relaxed Constraints	18,276	6733	1133	53	8	0	1	0	4	0	0	0
Percentage of Dispatch Intervals with N relaxed Constraints	70%*	26%	4.3%	<1%	<1%	0%	<1%	0%	<1%	0%	0%	0%

Table 2 – Amount of Primary Dispatch Intervals with various numbers of relaxed Constraints for Q2 of 2025

*The majority (70%) of intervals had no relaxed Constraints (N = 0) meaning that the Dispatch Algorithm found a feasible solution without violating any Constraints.
