

Announcement

NEM Reform

May 2024

This week, AEMO in collaboration with the Reform Delivery Committee (RDC), has released Version 4 of the NEM Reform Implementation Roadmap ('the Roadmap'). The Roadmap provides a holistic view of the NEM Reform Program's impact on the National Electricity and Gas Markets.

Version 4 provides for updates to over thirty (30) initiatives to reflect the current reform agenda capturing key changes in scope and/or timelines. Included in these updates are changes to key committed initiatives, Improving security frameworks for the energy transition and Enhancing reserve information, both of which reached a final determination from the AEMC in March of this year. This version also further simplifies the roadmap for stakeholders in that it merges the former NEM2025 and Regulatory Implementation Roadmap initiatives under a single banner.

The changes were worked through in accordance with a formal governance arrangements established under the Program. The updated Roadmap and supporting materials are available in full on [AEMO's website](#).

In addition to this supporting material, stakeholders can also access the materials from Reform Delivery Committee meetings on the [Committee's webpage](#).

Regards,

NEM Reform Program Team
