

STANDING DATA FOR MSATS

PREPARED BY: AEMO Markets

DOCUMENT REF:

VERSION: 5.<u>1</u>0

EFFECTIVE DATE: 1 May 20226 February 2022

STATUS: Initial Final

Approved for distribution and use by:

APPROVED BY: Peter Geers

TITLE: Chief Strategy and Markets Officer

DATE: 15 November 2019 TBD

VERSION RELEASE HISTORY

| Version | Effective Date | Summary of Changes |
|------------|-----------------|---|
| 4.0 | Aug 2009 | Update to AEMO Format. |
| 4.1 | 19/04/2012 | Updates to NMI Data tables to include Feeder Class, Customer Classification Code & Customer Threshold Code and minor data corrections. |
| 4.2 | 28/08/2013 | Updated wording for Nx suffixes in sections 8, 9 and 12. Updated reference to the CATS Procedures for Embedded Networks in section 7. Added new data stream type codes under section 11: Reference Tables. Updated reference to the NEM Metrology Procedures in section 15. |
| 4.3 | 1 December 2017 | Updated to incorporate: National Electricity Amendment (Expanding competition in metering and related services) Rule 2015. No.12; National Electricity Amendment (Embedded Networks) Rule 2015 No. 15; and National Electricity Amendment (Meter Replacement Processes) Rule 2016 No. 2. |
| 4.4 | 1 December 2017 | Final Version. |
| 5.0 | 6 February 2022 | Updated to incorporate amendments for National Electricity Amendment (Global Settlement and Market Reconcilliation) Rule 2018 No 14. |
| <u>5.1</u> | 1 May 2022 | Updated to include changes for the Metering ICF Package consultation commencing July 2020, the changes are for the following Information Change Requests (ICFs): • ICF 027 Average Daily Load (ADL) definition • ICF 029 Amend or revert definition of the Register ID field. This ICF reverts changes which were introduced during the Five Minute Settlement/Global Settlement consultation. |

1. INTRODUCTION

1.1. Purpose and scope

This document details the data requirements for the various data elements comprising the CATS Standing Data stored for each *NMI*, together with relevant examples and definitions.

1.2. Definitions and interpretation

The Retail Electricity Market Procedures – Glossary and Framework:

- (a) is incorporated into and forms part of this document; and
- (b) should be read with this document.

2. BACKGROUND

The five MSATS master tables contain the standing data stored for each *NMI*. They are the following:

Table 1 MSATS Master Tables

| Table | Summary of Contents |
|--------------------------------|--|
| CATS_NMI_DATA | Address, TNI Code, DLF Code, aggregate flag, embedded network names, Jurisdiction, NMI status code, etc. |
| CATS_NMI_PARTICIPANT_RELATIONS | Roles and associated Participants. Separate records are maintained for each Role/Participant relationship. |
| CATS_NMI_DATA_STREAM | Suffix, ADL Code, Profile Name, Datastream type and datastream status of each MDM Datastream. |
| CATS_METER_REGISTER | Meter Serial ID, meter type, meter manufacturer, test results, etc. |

| Table | Summary of Contents |
|--------------------------|--|
| CATS REGISTER IDENTIFIER | Meter Serial ID, Network Tariff Code, unit of measure etc. |

For a NMI to be capable of being used in MSATS, it must have the following minimum set of data:

- At least one record on the CATS_NMI_DATA table; and
- At least eight records on the CATS_NMI_PARTICIPANT_RELATIONS table, one for each of the mandatory roles (ROLR, LNSP, LR, RP, FRMP, MDP, MPC and MPB).

It will also normally have:

 At least one record on each of the CATS_METER_REGISTER and CATS_REGISTER_IDENTIFIER (there should be at least one record for each *meter* and register associated with the *NMI*) tables.

NMIs may or may not have:

Records on the CATS_NMI_DATA_STREAM table. If *metering data* is to be submitted for *settlements*, UFE calculations or Vic TUOS there must be at least one record on this table.

Every time a change is made to any of the data in any of these tables, the old records are made inactive and new records are created, thus ensuring that there is a complete history of all changes.

3. CONVENTIONS USED WITHIN THIS DOCUMENT

The format of the data fields in the 'Browser Format Column' column of Tables is as defined in Section 16.

The following information defines the coded entries in columns used in Tables 3, 6, 9, 12, 15, 18 and 21

3.1. Column Headed: Standing Data Required

The column indicates the requirement to provide this data to MSATS.

Table 2 Explanation of Standing Data Requirements

| Requirement | Description |
|------------------|--|
| MANDATORY | Transfer, Validation or processing cannot proceed without this data. |
| REQUIRED | This data must be provided if this information is available. |
| OPTIONAL | This data is not required, but will be accepted if delivered. |
| Address Option 1 | AEMO's preferred address option. If the applicable fields labelled "Address Option 1" cannot be provided, "Address Option 2" is MANDATORY. |
| Address Option 2 | AEMO's non-preferred address option. If Address Option 1 is provided, these fields are not to be supplied. |

3.2. NMIs Affected

Data must be provided for every *NMI* in MSATS. The *NMIs* that must be registered in MSATS are related to:

- All connection points points where a transmission network connects to another transmission network
- All connection points where a transmission network connects to a distribution network, i.e. bulk supply connection points

- All transmission network connection points where energy is directly purchased from the spot market by a Market Customer, i.e. wholesale connection points
- All connection points on a distibution network that connect that distribution network to an adjacent distibution network (other than an embedded network), i.e. cross boundary connection points
- Sample *meters* as required by Metrology Procedures Part A to calculate CLP for participating jurisdictions.
- All connection points associated with a non-registered embedded generator, i.e. a generating unit that is not classified by a *Market Generator*, but is eligible to be classified by a *Small Generation Aggregator* as a market generating unit.
- All type 7 loads
- All non-contestable unmetered loads
- All connection points associated with a generating unit classified by a Market Generator.
- All distribution network connection points where energy is directly purchased from the spot market by a Market Customer
- All distribution network connection points where there is a market load
- All child connection points.

4. CATS_METER_REGISTER

4.1. Field definitions

The CATS_Meter_Register table is a NMI master table containing data that is stored at the Meter Register level. Information stored at this level includes the NSRD. It is updated whenever a Change Request containing inbound Meter Register data is completed.

Table 3 CATS_METER_REGISTER - Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|----------------------------------|---|---|------------------|
| AdditionalSiteInformation | Free text, descriptive of the Site, describing Site access and the relationship between the <i>metering</i> point and the <i>connection point</i> . | OPTIONAL | МРВ |
| AssetManagementPlan | Asset management plan. If a Site plan is used, free text description of plan. If a sample plan is used, the name of the AEMO approved plan. | OPTIONAL | MPB |
| CalibrationTables | Calibration tables – details of any calibration factors programmed into the <i>meter</i> . | OPTIONAL | MPB |
| Communications Equipment Type | Used to store baud rate for installed communication equipment in a code, calculated by dividing the baud rate by 100, of the installed communication equipment. For example, 48 = 4800 baud. | OPTIONAL | MPB |
| CommunicationsProtocol | Used to provide details of access through switch units (if installed). Data to include Switch Unit, Dial Pkg, Port#, userid, password. | OPTIONAL | MPB |
| DataConversion | Actual Pulse Multipliers. | OPTIONAL | MPB |
| DataValidations | Free text description of required data validations. | OPTIONAL | MPB |
| EstimationInstructions | Estimation instructions. Free text field. | OPTIONAL | MPB |
| LastTestDate | The date on which the <i>metering installation</i> was last tested or inspected by the Metering Provider "B". This date will be used if clause 7.9.4(a) of the NER needs to be applied. | OPTIONAL | МРВ |
| MeasurementType | Code based on the <i>NMI</i> suffix codes, indicating the type of measurements available from the <i>meter</i> . For example, EBQK = bidirectional <i>energy</i> plus reactive Interval Meter. | OPTIONAL NOT USED for types 6 & 7 Transfers. | MPB |
| Constant | The $\textit{meter}\ K_E$ (intrinsic constraint of meter in Wh/pulse). | OPTIONAL | МРВ |
| Hazard | Free text or code identifying hazards associated with reading the <i>meter</i> . | OPTIONAL | MPB |
| InstallationTypeCode | The InstallationTypeCode may identify attributes of a physical metering installation, metering data | MANDATORY | MPB |

| | collection methods or <i>metering data</i> calculation methods. | | |
|--------------|--|-----------|-----|
| | This value must correspond to a valid Meter Installation Type Code as referenced in CATS Procedures. | | |
| Location | Free text descriptive material identifying the relationship between the location of the <i>metering</i> point and the connection point. | OPTIONAL | MPB |
| Manufacturer | Free text field to identify the manufacturer of the installed <i>meter</i> . | OPTIONAL | MPB |
| Model | Free text field to identify the <i>meter</i> manufacturer's designation for the <i>meter</i> model. | OPTIONAL | MPB |
| Point | Identifies the <i>meter</i> uniquely for the <i>NMI</i> . In the format 0n, where n is the <i>meter</i> number per the protocol described in the NMI Procedure. The allowed values are 01 to 09, 0A to 0H, 0J to 0N, | OPTIONAL | MPB |
| | OP to OZ. This will allow an audit trail when one <i>meter</i> is removed and a new <i>meter</i> is given the same MeterPoint value. | | |
| Program | Free text field providing a description of the program used to initialise the installed <i>meter</i> . | OPTIONAL | МРВ |
| ReadTypeCode | Code to denote the method and frequency of Meter Reading. First Character = Remote (R) or Manual (M); Second Character = Mode T = telephone W = wireless P = powerline I = infra-red G = galvanic V = visual Third Character = Frequency of Scheduled Meter Readings 1 = Twelve times per year 2 = Six times per year 3 = Four times per year D = Daily or weekly Fourth Character = Undefined. Example: MV3 = Manual, Visual, Quarterly. RWD = Remote, Wireless, Daily (applicable for Vic AMI metering installations where InstallationTypeCode = 'MRIM' and JurisdictionCode = 'Victoria') | OPTIONAL | MPB |
| Route | The route identifier the <i>meter</i> is currently being read in. | OPTIONAL | МРВ |
| SerialNumber | The Meter Serial ID uniquely identifies a <i>meter</i> for a given <i>NMI</i> . Maximum 12 Characters (alpha numeric). Unique for <i>NMI</i> . | MANDATORY | MPB |
| | | | |

| Use a dummy value for UMCP (Type 7), logical (meters) and non-contestable unmetered loads: Except for UMCP, logical and non-contestable unmetered loads (where a dummy value is used), SeniNumbers should be as displayed on the physical device (also known as property number if it exists), otherwise the meter manufacturer's serial number. Status A code to denote the status of the meter. This value must correspond to a valid Meter Register Status as specified in the CATS Procedures. Use A code identifying how the meter is used. OPTIONAL MPB Initially, then Meter is used. NextScheduledReadDate Indicates the Scheduled Next Read Date for the meter if a manual Meter Reading is required. MPB initially, then MPB initially, then MPB initially, then MPB initially in the MPB in MPB initially. The MPB initially is then MPB initially in the MPB initially in the MPB initially in the MPB initially. | which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). ToDate End date of the record. This indicates the date on MANDATORY System generated | UserAccessRights | installation; examples include pulse outputs, interface to consumer load management system, or consumer directly accessing data in <i>meter</i> by special | OPTIONAL | МРВ |
| , , | FromDate | which the parameters of this particular record apply from. The data applies from the beginning of this | MANDATORY | |
| | ToDate | | MANDATORY | |

| | The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | (Defaults to high date unless supplied) | |
|-----------------|---|---|------------------|
| RowStatus | Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

5. CATS_DLF_CODES

5.1. Field definitions

The CATS_DLF_Codes table contains a list of DLF Codes and their relevant values. The StartDate and DLFCode fields will need to be provided for *settlements* calculations.

Table 6 CATS_DLF_CODES- Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|-----------------------------------|--|---------------------------|---------------------|
| DistributionLossFactorCode | A four character alpha-numeric code used to identify DLF values. All <i>NMIs</i> must be assigned a DLF Code. Refer to AEMO Distribution Loss Factor documents for each financial year. | MANDATORY | AEMO |
| DistributionLossFactorDescription | Description of the DLF Code and value. | MANDATORY | AEMO |
| DistributionLossFactor Value | Numeric value up to 5 decimal places, reflecting the value of the DLF Code. | MANDATORY | AEMO |
| JurisdictionCode | Jurisdiction code to which the <i>NMI</i> belongs. This value must correspond to Jurisdiction Code values as specified in the CATS Procedures. | MANDATORY | AEMO |
| RowStatus | Indicates whether the DLF Code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| FromDate | Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | AEMO |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

The table below lists the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 7 CATS_DLF_CODES- - Browser cross reference

| Browser Field Name | aseXML Data Element Name | aseXML Path | Browser Format | aseXML Data Type |
|-----------------------|------------------------------------|---|---|--|
| DLF Code | DistributionLossFactorC ode | DistributionLossFactorCode | VARCHAR2(4) | xsd:string maxLen = 4 |
| Description | DistributionLossFactorD escription | DistributionLossFactorDescription | VARCHAR2(50 | xsd:string maxLen = 50 |
| DLF Value | DistributionLossFactorV alue | DistributionLossFactorValue | NUMBER(6,5) | xsd:decimal minIncl = 0 maxIncl = 2 totdig = 6 fracdig = 5 |
| Jurisdiction | JurisdictionCode | ElectricityStandingData/MasterData/ JurisdictionCode | VARCHAR2(3) | xsd:string maxLen = 3 |
| Activity Status | RowStatus | RowStatus | CHAR(1) | xsd:string with enumeration |
| Start Date | FromDate | FromDate | dd-mmm-yyyy | xsd:dateTime |
| End Date | ToDate | ToDate | dd-mmm-yyyy | xsd:dateTime |
| Updated On | MaintenanceDate | MaintenanceDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |
| Created On | CreationDate | CreationDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |

5.3. Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

Table 8 CATS_DLF_CODES- Examples

| Data Element Name | Browser Field Name | Basic & Interval Example |
|-----------------------------------|------------------------|---|
| DistributionLossFactorCode | DLF Code | NHV1 |
| DistributionLossFactorDescription | Description | UMPLP - High Voltage |
| DistributionLossFactorValue | [The actual DLF value] | 1.11111 |
| JurisdictionCode | Jurisdiction Code | SA |
| RowStatus | Activity Status | А |
| FromDate | Start Date | 01-07-1999 |
| ToDate | End Date | 30-06-2000 |
| MaintenanceDate | Updated On | 31-05-2000 (Summary Screen) 31-05-2000 00:30:27 (Detail Screen) |
| CreationDate | Created On | 01-06-1999 (Summary Screen) 01-06-1999 00:23:32 (Detail Screen) |

6. CATS_EMB_NET_ID_CODES

6.1. Field definitions

The CATS_EMB_NET_ID_CODES table contains embedded network identifier codes, which are used to identify which *embedded network* a *NMI* belongs to, either as a Parent NMI or a Child NMI.

Table 9 CATS_EMB_NET_ID_CODES- Field definition

| Data Element Name | Description | Standing Data Required | Party to Provide |
|--------------------------------|--|---------------------------|---------------------|
| EmbeddedNetwork Identifier | Embedded Network Code. Refer to Allocation of Embedded Network Codes for further details. | MANDATORY | AEMO |
| EmbeddedNetwork Description | Description of embedded network identifier. | MANDATORY | AEMO |
| SuburbOrPlaceOrLocality | Locality to which the embedded network identifier belongs. | MANDATORY | AEMO |
| PostCode | Postcode for the locality to which the embedded network identifier belongs. | MANDATORY | AEMO |
| StateOrTerritory | State or Territory abbreviation in accordance with AS 4590. | MANDATORY | AEMO |
| RowStatus | Indicates whether the code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| FromDate | Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | AEMO |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

The table below list the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 10 CATS EMB NET ID CODES- Browser

| Tuble 10 | CATS_EMB_NET_ID_CODES- Blowset | | | |

7. CATS_NMI_DATA

7.1. Field definitions

The CATS_NMI_DATA table records Master NMI Record data information. It is updated whenever a Change Request containing data in the CATS_INBOUND_NMI_DATA table is completed.

Table 12 CATS_NMI_DATA- Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|-------------------------------------|---|---------------------------|---------------------|
| NMI | <i>NMI</i> . All alpha characters are Upper Case. | MANDATORY | LNSP |
| NMI ClassificationCode | Code used to indicate the NMI Classification Code of this <i>NMI</i> . This value must correspond to NMI Classification Code values as specified in the CATS Procedures. | MANDATORY | LNSP |
| MasterData/ StatusCode | Code used to indicate the status of the <i>NMI</i> . This value must correspond to NMI Status Code values as specified in the CATS Procedures. | MANDATORY | LNSP |
| TransmissionNode Identifier | This value must correspond to a valid code in the CATS_TNI_Codes table. | MANDATORY | LNSP |
| JurisdictionCode | Jurisdiction code to which the <i>NMI</i> belongs. This code defines the jurisdictional rules which apply to the transfer of this <i>NMI</i> . This value must correspond to Jurisdiction Code values as specified in the CATS Procedures. | MANDATORY | LNSP |
| DistributionLoss FactorCode | Distribution Loss Factor Code. Must be a valid code in the CATS_DLF_Codes table. | MANDATORY | LNSP |
| ChildEmbedded NetworkIdentifier | The embedded network identifier code is used to identify which embedded network this given <i>NMI</i> is the 'child of'. (If on a NMI record this field is not populated, it is assumed the <i>NMI</i> is not the child of any other <i>NMI</i> .) Must be a valid code within the CATS_Emb_Net_ID_Codes table. This field cannot be used unless the Parent NMI has been created and assigned an embedded network identifier code. Refer section 30.4.a of the CATS Procedure. | REQUIRED | LNSP |
| ParentEmbedded NetworkIdentifier | The embedded network identifier code is used to identify which <i>embedded network</i> this given <i>NMI</i> is the 'parent of'. (If on a NMI record this field is not populated, it is assumed the <i>NMI</i> is not the parent of any other <i>NMI</i> .) Must be a valid code within the CATS_Emb_Net_ID_Codes table. | REQUIRED | LNSP |
| BuildingOrProperty Name | A free text description of the full name used to identify the physical building or property as part of its location. | Address Option 1 | LNSP |

| LotNumber The lot reference number allocated to an address prior to street number in the word *LOT* is not required. Specification of the number of the flat or unit which is a separately identifiable portion within a building/complex. FlatOrUnitType Specification of the type of flat or unit which is a separately identifiable portion within a building/complex. FloorOrLevelNumber Floor Number is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid flat type Code, reference AS4590. FloorOrLevelType FloorOrLevelType Floor Type is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Codes, reference AS4590. HouseNumber The numeric reference of a house or property. Specifically the house number. The numeric reference of a house or property. Specifically the single character identifying the house number suffix. StreetName Records the thoroughlare name. See notes at end of lable for more information on Structured Addresses. StreetSuffix Records the tirretype abbreviation. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must Address Option 1 Records the street type abbreviation. This value must Address Option 1 Records the street type abbreviation. This value must Address Option 1 Records the street type abbreviation. Floor PlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor Address Innspecific address. LocationDescriptor PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTermitory Defined State or Territory abbreviation. PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTermitory Defined State or Territory abbreviation. PostCode The descriptor for a postal delivery area, aligned with locality. Suburb or | | | | |
|--|-------------------------|--|-----------|------|
| Separately identifiable portion within a building/complex. FlatOrUnitType Specification of the type of flat or unit which is a separately identifiable portion within a building/complex. This value must correspond to a valid Flat Type Code, reference AS4590. FloorOrLevelNumber Floor Number is used to identify the floor or level of a multi-storey building/complex. Floor Type is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Code Codes, reference AS4590. HouseNumberSuffix The numeric reference of a house or property. Specifically the house number. Address Qption 1 Address UNSP StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must correspond to a valid Street Type Code, reference AS4590. SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. Location Separate Type Code in the Floor Type Code | LotNumber | · | | LNSP |
| separately identifiable portion within a building/complex. This value must correspond to a valid Flat Type Code, reference AS4590. FloorOrLevelNumber Floor Number is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Code in the Floor Type Code, reference AS4590. HouseNumber The numeric reference of a house or property. Specifically the house number. HouseNumberSuffix The numeric reference of a house or property. Specifically the house number. HouseNumberSuffix The numeric reference of a house or property. Specifically the single character identifying the house number suffix. StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must Address Option 1 StreetType Records the street type abbreviation. This value must Address Option 1 StreetType Records the street type Ashreviation. This value must Address Option 1 StreetType Records the street type Ashreviation. This value must Address Option 1 StreetType Records the street type Abbreviation. This value must Address Option 1 StreetType Records the street type abbreviation. This value must Address Option 1 StreetType Records the street type abbreviation. MANDATORY INSP SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor A general field to capture various references to address locations alongside another physical location. PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTerritory Defined State or Territory abbreviation. MANDATORY LNSP DeliveryPointIdentifier Delivery point which is equal to a physical address. The values are in the range 10000000 – goone and the postal delivery point which is equal to a physical add | FlatOrUnitNumber | separately identifiable portion within a | | LNSP |
| multi-storey building/complex. Ploor Type is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Codes, reference AS4590. HouseNumber The numeric reference of a house or property. Specifically the house number. The numeric reference of a house or property. Specifically the single character identifying the house option 1 The numeric reference of a house or property. Specifically the single character identifying the house option 1 StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must correspond to a valid Street Suffix Code, reference AS4590. SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor A general field to capture various references to address Address Coption 1 PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTerritory Defined State or Territory abbreviation. DeliveryPointIdentifier Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 – 999999999. AddressLine To provide the unstructured address (line 1) where a structured address cannot be supplied. AddressLine To provide the unstructured address (line 2) where a structured address cannot be supplied. AddressLine To provide the unstructured address (line 3) where a Address LNSP | FlatOrUnitType | separately identifiable portion within a building/complex. This value must correspond to a valid | | LNSP |
| multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Code, reference AS4590. HouseNumber The numeric reference of a house or property. Specifically the house number. HouseNumberSuffix The numeric reference of a house or property. Specifically the single character identifying the house number suffix. StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must correspond to a valid Street Suffix Code, reference AS4590. SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor A general field to capture various references to address locations alongside another physical location. PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTerritory Defined State or Territory abbreviation. MANDATORY LNSP DeliveryPointIdentifier Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 – 999999999. AddressLine To provide the unstructured address (line 1) where a structured address cannot be supplied. AddressLine To provide the unstructured address (line 2) where a structured address cannot be supplied. AddressLine To provide the unstructured address (line 3) where a Address LNSP | FloorOrLevelNumber | - | | LNSP |
| Specifically the house number. Option 1 HouseNumberSuffix The numeric reference of a house or property. Specifically the single character identifying the house number suffix. StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. Option 1 StreetType Records the street type abbreviation. This value must correspond to a valid Street Type Code, reference AS4590. SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor A general field to capture various references to address locations alongside another physical location. Option 1 PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTerritory Defined State or Territory abbreviation. MANDATORY LNSP DeliveryPointIdentifier Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 - 99999999. AddressLine To provide the unstructured address (line 1) where a structured address cannot be supplied. Address Line To provide the unstructured address (line 2) where a structured address cannot be supplied. AddressLine To provide the unstructured address (line 3) where a Address LNSP | FloorOrLevelType | multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type | | LNSP |
| Specifically the single character identifying the house number suffix. StreetName Records the thoroughfare name. See notes at end of table for more information on Structured Addresses. StreetSuffix Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590. StreetType Records the street type abbreviation. This value must correspond to a valid Street Type Code, reference AS4590. SuburbOrPlaceOrLocality The full name of the general locality containing the specific address. LocationDescriptor A general field to capture various references to address locations alongside another physical location. PostCode The descriptor for a postal delivery area, aligned with locality, suburb or place. StateOrTerritory Defined State or Territory abbreviation. MANDATORY LNSP DeliveryPointIdentifier Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 - 99999999. AddressLine To provide the unstructured address (line 1) where a structured address cannot be supplied. | | AddressLine | · | | LNSP |

| Aggregate | This flag determines whether the energy at this connection point is to be treated as consumer load or as a generating unit (this may include generator auxiliary loads). MSATS will initially set this field to "Y" This value must correspond to a valid Aggregate value in the Aggregate | OPTIONAL | (Defaults to 'Y', AEMO updates to 'N' as required) |
|---|---|---|---|
| FromDate | Codes reference table listed in section 11. Start date of the NMI Data record. This indicates the date on which the parameters of this particular NMI data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | LNSP |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY (Defaults to high date unless supplied) | System generated unless supplied. |
| RowStatus | Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |
| Feeder Class | A code to provide Participants with information to indicate the appropriate service level timeframes for performing work in relation to Service Order Requests. | OPTIONAL | LNSP |
| Customer Classification Code | A code that defines the consumer class as defined in the National Energy Retail Regulations, or in overriding Jurisdictional instruments. | MANDATORY | Current FRMP |
| Customer Classification Threshold Code | A code that defines the consumption threshold as defined in the National Energy Retail Regulations, or in overriding Jurisdictional instruments. | MANDATORY | LNSP |

The table below list the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

8. CATS_NMI_DATA_STREAM

8.1. Field definitions

The CATS_NMI_Data_Stream table is a NMI master table containing data that is stored at the *NMI* Datastream level. Information stored at this level includes suffixes, profile name, average daily load etc. It is updated whenever a Change Request containing inbound Datastream data is completed.

Note: Data is only required for this table if the *NMI* is active in the NEM or is used for profile peel-off in accordance with the Metrology Procedure.

Table 15 CATS_NMI_DATA_STREAM- Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|------------------------------|---|---------------------------|---------------------|
| NMI | NMI. | MANDATORY | MDP LNSP |
| ElectricityDataStream/Suffix | The Metering Datastream identifier (for MDM). Identifies the ElectricityDataStream Suffix as delivered to AEMO for NEM Settlement calculations, profile peeloff, UFE analysis and Vic TUOS sites. The value must be a valid as per Datastream suffix details specified in the NMI Procedure. The value must match the MDMContributorySuffix value provided in an MDFF File. | MANDATORY | MDP |
| ElectricityDataStream/Status | Code used to indicate the status of the suffix. This value must correspond to a valid Datastream Status Code as specified in the CATS procedures. | MANDATORY | MDP |
| Averaged Daily Load | The <i>energy</i> delivered <u>or generation delivered via</u> through a <u>datastream connection point or metering</u> point—over an extended period normalised to a "per day" basis (kWh). | MANDATORY | MDP |
| DataStreamType | Indicates the primary function of the ElectricityDatastream Suffix. i.e. inclusion within NEM Settlement calculations, UFE analysis, profile peeloff or Vic TUOS. This value must correspond to a valid DataStreamType in the Data Stream Type Codes reference table listed in section 11. | MANDATORY | MDP |
| ProfileName | The Profile Name is a code that identifies the name of the algorithmically derived shape that is used to allocate a Datastream's consumption to Tls. This value must correspond to a valid code in the PROFILE table. For all Interval Meters and sample <i>meters</i> , this must be set to 'NOPROF'. For Accumulation Meters, refer to the MDM Profile for valid profile names. In Victoria and the ACT, ProfileName must be NSLP. | MANDATORY | MDP |

| | In NSW, QLD and SA, ProfileName must be NSLP or the relevant controlled load profile. This value must correspond to a valid ProfileName value in the Profile Codes reference table listed in section 11. | | |
|-----------------|--|---|--|
| FromDate | Start date of the <i>NMI</i> data record. This indicates the date on which the parameters of this particular <i>NMI</i> data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | Party sending transaction |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY (Defaults to high date unless supplied) | System generated unless supplied. |
| RowStatus | Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

The table below list the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 16 CATS_NMI_DATA_STREAM- Browser cross reference

| rowser Field name | aseXML Data Element Name | aseXML Path | BrowserFormat | aseXMLData Type |
|-----------------------|-----------------------------|--|---|-----------------------------|
| NMI | NMI | NMI | CHAR(10) | xsd:string maxLen=10 |
| Suffix | Suffix | ElectricityDatastream/Suffix | VARCHAR2(2) | xsd:string maxLen=2 |
| Status Code | Status | ElectricityDatastream/Status | CHAR(1) | xsd:string maxLen=10 |

| Created On | CreationDate | CreationDate | dd-mmm-yyyy (Summary Screen) dd-mmm-yyyy hh:mm:ss (Detail Screen) | xsd:dateTime |
| Activity Status | RowStatus | RowStatus | CHAR(1) | xsd:string with enumeration |

8.3. Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

Table 17 CATS_NMI_DATA_STREAM- Example

| Data Element Name | Browser Field Name | Basic Example | Interval Example |
|---|--------------------|---------------|------------------|
| NMI | NMI | 1100445566 | 2211335544 |
| ElectricityDataStream/Suffix | Suffix | 31 | E1 |
| ElectricityDataStream/Status | Status Code | А | Α |
| ElectricityDataStream/ AveragedDailyLoad | Average Daily Load | 5 | 800 |
| ElectricityDataStream/ DataStreamType | Туре | С | I |

| ElectricityDataStream/ ProfileName | Profile Name | NSLP | NOPROF |
|---------------------------------------|-----------------|--|--|
| FromDate | Start Date | 31-12-2001 | 01-06-2005 |
| ToDate | End Date | 31-12-9999 | 31-12-9999 |
| MaintenanceDate | Updated On | 02-01-2004 (Summary Screen) 02-01-2004 13:27:58 (Detail Screen) | 31-12-9999 (Summary Screen) 31-12-9999 00:00:00 (Detail Screen) |
| CreationDate | Created On | 19-01-2002 (Summary screen) 19-01-2002 17:15:23 (Detail screen) | 05-06-2005 (Summary screen) 05-06-2005 15:12:20 (Detail screen) |
| RowStatus | Activity Status | I | Α |

9. CATS_REGISTER_IDENTIFIER

9.1. Field definitions

The CATS_Register_Identifier table contains data that is stored at the register identifier level. Information stored at this level includes the Network Tariff Code. It is updated whenever a Change Request containing inbound register identifier data is completed.

Table 18 CATS_REGISTER_IDENTIFIER- Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|----------------------------------|--|---------------------------|------------------|
| NMI | <i>NMI</i> . This number is unique for each <i>connection point</i> within the NEM. | MANDATORY | LNSP |
| SerialNumber | The Meter Serial ID uniquely identifies a <i>meter</i> for a given <i>NMI</i> . Maximum 12 Characters (alpha numeric). Unique for <i>NMI</i> . Use dummy for UMCP (Type 7), logical (<i>meters</i>) and <i>non-contestable unmetered loads</i> . Except for UMCP, logical and <i>non-contestable unmetered loads</i> , MeterSerial should be displayed on physical device also known as property number). SerialNumber to be property number if exists, otherwise the <i>meter</i> manufacturers' serial number, otherwise dummy number. | MANDATORY | MPB |
| RegisterID | The RegisterID is used to identify a data source that is obtained from the meter. A single meter may provide multiple data sources. The RegisterID is an identifier used to identify records stored within the CATS_REGISTER_TABLE. A record must be created in the CATS_REGISTER_TABLE for each physical register within a meter. For Accumulation Meters, the RegisterID may reflect any unique identifier. E.g. '1', '01', '11', etc For Interval Meters, the RegisterID must match the content of the 'Suffix' within the CATS_REGISTER_IDENTIFIER table. E.g. 'E1', 'B1', 'Q1', 'K1', etc. | MANDATORY | MPB |
| NetworkTariffCode | The Network Tariff Code is a free text field required. The text must match the Network Tariff Codes supplied and published by the LNSP. Must be a valid code from the CATS_Network_Tariff_Codes table. | MANDATORY | МРВ |
| NetworkAdditional Information | Free text field. | OPTIONAL | МРВ |
| UnitOfMeasure | Code to identify the unit of measure for data held in this register. | MANDATORY | МРВ |

| Code to identify the time validity of register contents. As published by each LNSP. | MANDATORY | MPB |
|--|---|---|
| Multiplier required to take a register value and turn it into a value representing billable energy. | MANDATORY | МРВ |
| Describes the register display format. First number is the number of digits to the left of the decimal place, and the second number is the number of digits to the right of the decimal place. | MANDATORY | МРВ |
| The Suffix field in the CATS_REGISTER_IDENTIFIER table is used to identify a physical data source that is obtained from the <i>meter</i>. The Suffix in the CATS_REGISTER_IDENTIFIER table must be a valid as per Datastream suffix details specified in the NMI Procedure. The value must match the NMISuffix value provided in an MDFF File. For Basic Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table need not match the RegisterID in the CATS_REGISTER_IDENTIFIER table. For Interval Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table must match the RegisterID in the CATS_REGISTER_IDENTIFIER table. E.g. 'E1', 'B1'. | MANDATORY | MPB |
| Indicates whether the <i>energy</i> recorded by this register is created under a Controlled Load regime ControlledLoad field will have "No" if register does not relate to a Controlled Load. If the register relates to a Controlled Load, it should contain a description of the Controlled Load regime. | MANDATORY | MPB |
| Lookup code to indicate if register is active. Must ensure that RegisterDetail/Status is not Current (C) when ElectricityMeter/Status is Removed (R). This value must correspond to a valid Register Identifier Status as specified in the CATS Procedures. | MANDATORY | MPB |
| Actual/Subtractive Indicator. Actual (A) implies volume of energy actually metered between two dates. Cumulative (C) indicates a Meter Reading for a specific date. A second Meter Reading is required to determine the consumption between those two Meter Reading dates. For an Interval Meter, ActCumInd = A. | MANDATORY | MPB |
| | contents. As published by each LNSP. Multiplier required to take a register value and turn it into a value representing billable energy. Describes the register display format. First number is the number of digits to the left of the decimal place, and the second number is the number of digits to the right of the decimal place. The Suffix field in the CATS_REGISTER_IDENTIFIER table is used to identify a physical data source that is obtained from the meter. The Suffix in the CATS_REGISTER_IDENTIFIER table must be a valid as per Datastream suffix details specified in the NMI Procedure. The value must match the NMISuffix value provided in an MDFF File. • For Basic Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table need not match the RegisterID in the CATS_REGISTER_IDENTIFIER table. • For Interval Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table must match the RegisterID in the CATS_REGISTER_IDENTIFIER table. E.g. 'E1', 'B1'. Indicates whether the energy recorded by this register is created under a Controlled Load regime ControlledLoad field will have "No" if register does not relate to a Controlled Load. If the register relates to a Controlled Load, it should contain a description of the Controlled Load regime. Lookup code to indicate if register is active. Must ensure that RegisterDetail/Status is not Current (C) when ElectricityMeter/Status is Removed (R). This value must correspond to a valid Register Identifier Status as specified in the CATS Procedures. Actual/Subtractive Indicator. Actual (A) implies volume of energy actually metered between two dates. Cumulative (C) indicates a Meter Reading for a specific date. A second Meter Reading is required to determine the consumption between those two Meter Reading dates. | contents. As published by each LNSP. Multiplier required to take a register value and turn it into a value representing billable energy. Describes the register display format. First number is the number of digits to the left of the decimal place, and the second number is the number of digits to the right of the decimal place. The Suffix field in the CATS_REGISTER_IDENTIFIER table is used to identify a physical data source that is obtained from the meter. The Suffix in the CATS_REGISTER_IDENTIFIER table must be a valid as per Datastream suffix details specified in the NMI Procedure. The value must match the NMISuffix value provided in an MDFF File. • For Basic Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table must that the RegisterID in the CATS_REGISTER_IDENTIFIER table. • For Interval Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table must match the RegisterID in the CATS_REGISTER_IDENTIFIER table. • For Interval Meters, the Suffix in the CATS_REGISTER_IDENTIFIER table does not relate to a Controlled Load regime. ControlledLoad field will have "No" if register does not relate to a Controlled Load, it should contain a description of the Controlled Load, it should contain a description of the Controlled Load, was register relates to a Controlled Load, was register relates to a Controlled Load regime. Lookup code to indicate if register is active. Must ensure that RegisterDetail/Status is not Current (C) when ElectricityMeter/Status is Removed (R). This value must correspond to a valid Register Identifier Status as specified in the CATS Procedures. Actual/Subtractive Indicator. Actual (A) implies volume of energy actually metered between two dates. Cumulative (C) indicates a Meter Reading for a specific date. A second Meter Reading is required to determine the consumption between those two Meter Reading dates. |

| | This value must correspond to a valid ConsumptionType from the Consumption Type Codes reference table listed in section 11. | | |
|-----------------|--|---|---|
| Demand1 | This field contains the peak demand value for summer for network Tariff purposes. Units in kW or kVA. | OPTIONAL | MPB (Refers to Network Tariff Code) |
| Demand2 | This field contains an additional demand value (not Summer period). Units in kW or kVA. | OPTIONAL | MPB (Refers to Network Tariff Code) |
| FromDate | Start date of the <i>NMI</i> data record. This indicates the date on which the parameters of this particular <i>NMI</i> data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | Participant sending transaction |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY (Defaults to high date unless supplied) | System generated unless supplied. |
| RowStatus | Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

9.2. Cross Reference of Browser and aseXML Data Elements

The table below list the names that are used in the MSATS browser. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides ddata type conventions of the Browser formats shown in this section.

Table 19 CATS_REGISTER_IDENTIFIER- Browser cross reference

| Browser Field Name | aseXML Data Element Name | aseXML Path | Browser Format | aseXML Data Type |
|--|----------------------------------|---|---|--|
| NMI | NMI | NMI | CHAR(10) | xsd:string maxLen = 10 |
| Meter Serial ID Meter ID (Different on two screens) | SerialNumber | SerialNumber | VARCHAR2(12) | xsd:string maxLen = 12 |
| Register ID | RegisterID | ElectricityMeterRegisterDetail/R egisterID | VARCHAR2(10) | xsd:string maxLen = 10 |
| Network Tariff Code | NetworkTariffCode | ElectricityMeterRegisterDetail/N etworkTariffCode | VARCHAR2(10) | xsd:string maxLen = 10 |
| Network Tariff Additional Information | NetworkAdditional Information | ElectricityMeterRegisterDetail/ NetworkAdditionalInformation | VARCHAR2(4000) | xsd:string |
| Unit of Measure | UnitOfMeasure | ElectricityMeterRegisterDetail/ UnitOfMeasure | VARCHAR2(5) | xsd:string maxLen = 5 |
| Time of Day | TimeOfDay | ElectricityMeterRegisterDetail/ TimeOfDay | VARCHAR2(10) | xsd:string maxLen = 10 |
| Multiplier | Multiplier | ElectricityMeterRegisterDetail/Multiplier | Number(13,5) | xsd:decimal |
| Dial Format | DialFormat | ElectricityMeterRegisterDetail/D ialFormat | Number(4,2) | xsd:decimal minIncl = 0 maxIncl = 99.99 totdig = 4 fracdig = 2 |
| Suffix | Suffix | ElectricityMeterRegisterDetail/S uffix | VARCHAR2(2) | xsd:string maxLen = 2 |
| Controlled Load | ControlledLoad | ElectricityMeterRegisterDetail/ControlledLoad | VARCHAR2(100) | xsd:string maxLen = 100 |
| Status Code | Status | ElectricityMeterRegisterDetail/ Status | CHAR(1) | xsd:string with enumeration |
| Actual/Cumulative Indicator | ConsumptionType | ElectricityMeterRegisterDetail/C onsumptionType | CHAR(1) | xsd:string with enumeration |
| Demand 1 | Demand1 | ElectricityMeterRegisterDetail/D emand1 | Number(8) | xsd:integer totdig = 8 |
| Demand 2 | Demand2 | ElectricityMeterRegisterDetail/D emand2 | Number(8) | xsd:integer totdig = 8 |
| Start Date | FromDate | FromDate | dd-mmm-yyyy | xsd:dateTime |
| End Date | ToDate | ToDate | dd-mmm-yyyy | xsd:dateTime |
| Updated On | MaintenanceDate | MaintenanceDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |

| Created On | CreationDate | CreationDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |
|-----------------|--------------|--------------|---|-----------------------------------|
| Activity Status | RowStatus | RowStatus | CHAR(1) | xsd:string with enumeration |

9.3. Field value examples

This section provides examples of typical sets of data element values associated with different types of *connection points*.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

Table 20 CATS_REGISTER_IDENTIFIER- Examples

| Data Element Name | Browser Field Name | Basic Example | Interval Example |
|------------------------------|---|--|--|
| NMI | NMI | 1100445566 | 2211335544 |
| SerialNumber | Meter Serial ID Meter ID (Different on two screens) | 000012345 | 112258 |
| RegisterID | Register ID | 1 | E1 |
| NetworkTariffCode | Network Tariff Code | BLNB2CO | MB2RI |
| NetworkAdditionalInformation | Network Tariff Additional Information | General Supply Non TOU Eligible | LV TOU Demand Eligible |
| UnitOfMeasure | Unit of Measure | KWH | KWH |
| TimeOfDay | Time of Day | ALLDAY | INTERVAL |
| Multiplier | Multiplier | 1.00000 | 120.00000 |
| DialFormat | Dial Format | 5.00 | 5.10 |
| Suffix | Suffix | 11 | E1 |
| ControlledLoad | Controlled Load | HWLoad | No |
| Status | Status Code | C | С |
| ConsumptionType | Actual/Cumulative Indicator | C | A |
| Demand1 | Demand 1 | 0 | 0 |
| Demand2 | Demand 2 | 0 | 0 |
| FromDate | Start Date | 01-08-2004 | 01-06-2005 |
| ToDate | End Date | 31-12-9999 | 31-12-9999 |
| MaintenanceDate | Updated On | 31-12-9999 (Summary Screen) 31-12-9999 00:00:00 (Detailed Screen) | 31-12-9999 (Summary Screen) 31-12-9999 00:00:00 (Detailed Screen) |
| CreationDate | Created On | 01-11-2005 (Summary screen) 01-11-2005 22:30:30 (Detail screen) | 05-06-2005 (Summary screen) 05-06-2005 09:09:09 (Detailed screen) |

| RowStatus | Activity Status | Α | A |
|-----------|-----------------|---|---|
|-----------|-----------------|---|---|

10. CATS_NMI_PARTICIPANT_RELATIONS

10.1. Field definitions

The CATS_NMI_Participant_Relations table is a NMI master table containing data that stores the Roles that Participants play for each *NMI*. It is updated whenever a Change Request containing inbound Roles is completed. Each Role record, which contains a single Role code and a single Participant ID, has a start date and an end date, as well as information about when it was created and when it became inactive if it is no longer an active record.

Note: References to 'LNSP' include the ENM for child connection points.

Table 21 CATS_NMI_PARTICIPANT_RELATIONS- Field definitions

| Data Element Name | Description | Standing Data Required | Party to Provide |
|-------------------|--|---|--|
| Party | The Participant ID whose relationship (Role) with the <i>NMI</i> is defined in this table. | MANDATORY | LNSP |
| NMI | NMI. This number is unique for each connection point. | MANDATORY | LNSP |
| Role | This defines the relationship (Role) of the Participant with the <i>NMI</i> in this table. | MANDATORY | LNSP |
| FromDate | Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00). | MANDATORY | Party sending transaction |
| ToDate | End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided. | MANDATORY (Defaults to high date unless supplied) | System generated unless supplied. |
| RowStatus | Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive). | MANDATORY | System generated |
| MaintenanceDate | Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated. | MANDATORY | System generated |
| CreationDate | Date and time the record was created. | MANDATORY | System generated |

10.2. Cross Reference of Browser and aseXML Data Elements

The tables below list the names that are used in the MSATS browser for each of the MSATS tables detailed in sections 4 to 10. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Section 16 provides data type conventions of the Browser formats shown in this section.

Table 22 CATS_NMI_PARTICIPANT_RELATIONS- Browser

| Browser Field Name | aseXML Data Element Name | aseXML Path | Browser Format | aseXML Data Type |
|--------------------|-----------------------------|-----------------|---|-----------------------------|
| Participant ID | Party | Party | VARCHAR2(10) | xsd:string |
| NMI | NMI | NMI | CHAR(10) | xsd:string maxLen = 10 |
| Role | Role | Role | VARCHAR2(4) | xsd:string maxLen = 4 |
| Start Date | FromDate | FromDate | dd-mmm-yyyy | xsd:dateTime |
| End Date | ToDate | ToDate | dd-mmm-yyyy | xsd:dateTime |
| Updated On | MaintenanceDate | MaintenanceDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |
| Created On | CreationDate | CreationDate | dd-mmm-yyyy (summary screen) dd-mmm-yyyy hh:mm:ss (detail screen) | xsd:dateTime |
| Activity Status | RowStatus | RowStatus | CHAR(1) | xsd:string with enumeration |

11. REFERENCE TABLES

Table 23 Valid Aggregate Codes

| Aggregate | Description |
|-----------|----------------|
| Υ | Customer load. |
| N | Generator NMI. |

Table 24 Valid Consumption Type Codes

| Consumptiontype | Description |
|-----------------|-------------------------|
| А | Actual Consumption. |
| С | Cumulative Consumption. |

Table 25 Valid Datastream Type Codes

| Datastreamtype | Description | Datastream suffix (as per NMI Procedure) |
|----------------|--|--|
| 1 | Interval Datastream included in NEM Settlement process. | A, D, B, E, N |
| С | Consumption Datastream is included in NEM Settlement Process. | First character is 1 to 9 |
| Р | Profile Datastream included in NEM Profile calculations (Sample meters only). | E, N |
| N | Interval Datastream is not to be included in the NEM Settlement process or NEM Profile calculations. | J, P, S, K, Q, T, G, H, M, V, C, F, L, R, U, Y, W, Z, X |
| | | A,D,B,E when not used for NEM Settlements (e.g. Vic TUOS) |

Table 26 Valid Profile Codes

| ProfileName | Description |
|-------------|---|
| NSLP | Net System Load Profile. The profile is calculated by MSATS. NSLP represents the system load after all actual <i>interval metering data</i> or specified previously-calculated profiled <i>metering data</i> that is not dependent on the NSLP has been subtracted from a known total system load and represents system-wide usage by consumption-type <i>metering installations</i> . |
| CLOADNSWCE | Controlled Load profile: Country Energy. (Now Essential Energy) Profile Names beginning with CLOAD are Controlled Load profiles. Controlled Load profiles are applied to Controlled Load Datastreams in NSW. There is one Controlled Load profile for each LNSP area. The names all begin with CLOADNSW to indicate that they are NSW Profile Names followed by two characters to indicate the LNSP area to which it belongs (e.g. EA = EnergyAustralia). |
| CLOADNSWEA | Controlled Load profile: EnergyAustralia (Now Ausgrid). |
| CLOADNSWIE | Controlled Load profile: IntegralEnergy (Now Endeavour Energy) |

| ProfileName | Description |
|-------------|--|
| QLDEGXCL31 | Controlled Load profile Energex tariff 31 |
| QLDEGXCL33 | Controlled Load profile Energex tariff 33 |
| SACLOAD | South Australian Controlled Load. |
| NOPROF | Used for interval Datastream types (to indicate that such Datastreams do not need to be profiled to obtain 'readings' for each <i>settlements</i> interval because the data is supplied in 30-minute intervals). |

Note: Refer to the MSATS CATS Procedure section 4 for details on the valid codes for the following:

- Jurisdiction Codes
- Metering Installation Type Codes
- NMI Classification Codes
- NMI Status Codes
- Datastream Status Codes

12. USE OF NMI SUFFIX TO POPULATE CATS_REGISTER_IDENTIFIER

For any particular *connection point* there may be multiple *energy* measurement elements and data recorders with multiple channels. Accurate identification of Datastreams is essential.

The NMI Procedure includes the requirements for structure of both the Suffix populated in the CATS_REGISTER_IDENTIFIER table and the ElectricityDataStream Suffix populated in the CATS_DATA_STREAM table.

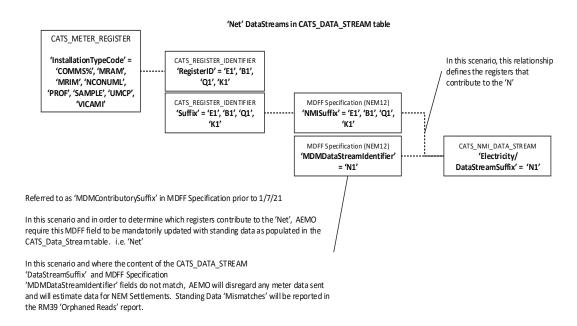

The illustrations below provide context to the relationships between 'Suffix' across the MDFF Specification and CATS Procedures (specifically the CATS_REGISTER_IDENTIFIER table and CATS_DATA_STREAM tables).

Example of an Accumulated Meter 'Suffix'

In this scenario, this relationship CATS_METER_REGISTER creates a 'link' between Standing CATS_REGISTER_IDENTIFIER 'InstallationTypeCode' = Data & Meter Data 'RegisterID' = '1', '01', '11' 'BASIC' CATS_REGISTER_IDENTIFIER MDFF Specification (NEM13) 'Suffix' = '11', '21', '42' 'NMISuffix' = '11', '21', '42' MDFF Specification (NEM13) CATS_NMI_DATA_STR EAM 'Electricity/DataStreamSuffix' '11', '21', '42' 'MDMDataStreamIdentifier' '11', '21', '42' Referred to as 'MDMContributorySuffix' in MDFF Specification prior to 1/7/21 In this scenario, AEMO do not refer to this MDFF field as the Registers can be determined from the CATS Data Stream table directly

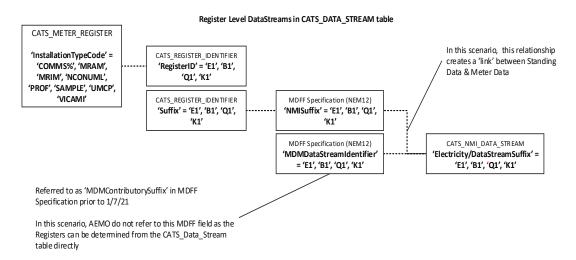

Accumulated DataStreams in CATS_DATA_STREAM table

Example of an Interval Meter 'Suffix' – Net DataStreams

Example of an Interval Meter "Suffix" – Register Level DataStreams

Note:

- A record must be created in the CATS_REGISTER_TABLE for each register required for settlements, profiling and UFE calculations.
- An ElectricityDataStream Suffix must be created for all individual DataStreams required for NEM Settlement calculations, profile peeloff, UFE analysis and Vic TUOS sites.

The NMI Procedure includes the requirements for the use of a suffix to the *NMI* that identifies these Datastreams. The DataStreamSuffix detailed in the NMI Procedure provides identification at the measurement element level for all Datastreams from the *connection point* identified by the *NMI*. The DataStreamSuffix is commonly known as the NMISuffix. The NMISuffix is labelled as 'Suffix' in the Browser and is the ElectricityDataStream/Suffix data element in aseXML.

The NMISuffix was first used in the NMI Procedure to describe, in conjunction with the *NMI*, the data transferred from the MDP to AEMO and Participants for *settlements*. The NMISuffix was further extended to describe Datastreams in MSATS, and numeric suffixes were developed to describe the data from type 6 *metering installations*.

In MSATS, the NMISuffix is used in the CATS_NMI_DATA_STREAM table to describe the data as delivered to AEMO. For *settlements* purposes this data must be 'NET' [Export from *network*, less import to *network*] and will be 'Nx' for an interval Datastream, or numeric for an Accumulation Meter.

In MSATS release 2.0 a new table, CATS_REGISTER_IDENTIFIER, was introduced to link identifiers for the source *meter* register(s) to the Datastream suffix in the CATS_NMI_DATA_STREAM table. The purpose of the table is to enable the alignment of the data held in MSATS and the data being transferred between Participants in the B2B process.

This link is achieved through the RegisterID (which describes the data source at the *metering installation*) and ElectricityDataStream/Suffix (which describes the NMISuffix to which the RegisterID contributes) data elements. This is a many-to-one relationship, i.e. there may be multiple RegisterID values for each ElectricityDataStream/Suffix value in the CATS_REGISTER_IDENTIFIER table.

- The RegisterID identifies the measurement element and type of measurement for an Interval Meter, and identifies the location of a stored energy value in an Accumulation Meter.
- The ElectricityDataStream/Suffix value in the CATS_NMI_DATA_STREAM table identifies the Datastream registered in MSATS. For *settlements* purposes, Interval Meter Datastreams will be the NET suffix (format Nx) and for Accumulation Meter Datastreams the suffix value is numeric.

MSATS requires data to be delivered against this suffix (if the Datastream is ACTIVE). MSATS does not validate the values entered in this field.

- The ElectricityDataStream/Suffix value in the CATS_REGISTER_IDENTIFIER table identifies the individual Datastream(s) contributing to the ElectricityDataStream/Suffix value in the CATS_NMI_DATA_STREAM table. For interval Datastreams, the suffix(es) will indicate the individual Datastream(s) contributing to the Nx Suffix value in the CATS_NMI_DATA_STREAM table where the DataStreamType is P or I (Refer section 14for examples). For accumulation Datastreams the value will be numeric and will be identical to the related Suffix value in the CATS_NMI_DATA_STREAM table (refer section 13 for examples).
- The ElectricityDataStream/Suffix values used in the CATS_REGISTER_IDENTIFIER table are used to identify *metering data* contained in MDFF Files (in the NMISuffix field).
- The linkage between the RegisterID and ElectricityDataStream/Suffix exists because the ElectricityDataStream/Suffix data element is populated in the CATS_REGISTER_IDENTIFIER table.
- The RegisterID data element has no standard format; therefore, the MPB must determine the appropriate population of this field, e.g. it may be used to indicate the programming code of the register.

There is an inconsistent understanding across industry of the meaning of the terms 'register' and 'datastream'. Conventionally, to field metering personnel, a 'register' contains a single value, while a 'datastream' represents an array of time separated register values in chronological order.

For Accumulation Meters, the RegisterID refers to the non-volatile storage of the cumulative energy register(s). The RegisterID will have identification with the displays of the *meters*, or identification of internal data stores.

For Accumulation Meters, the ElectricityDataStream/Suffix data element in the CATS_REGISTER_IDENTIFIER table may have a many-to-one relationship with the ElectricityDataStream/Suffix data element in the CATS_NMI_DATA_STREAM table. That is, the same Suffix may occur several times in the CATS_REGISTER_IDENTIFIER table and occur once only in the CATS_NMI_DATA_STREAM table.For Interval Meters, the definition of the RegisterID field is less obvious. To make this field useful, the RegisterID should be associated with the ElectricityDataStream/Suffix. As Interval Meters may have multiple measurement elements and there may be multiple meters for a NMI, the MDP must manage Datastreams against a NMI to avoid duplication of ElectricityDataStream/Suffixes and provide correct mapping of RegisterIDs.

13. ASSIGNMENT OF DATA – ACCUMULATION METERS

This section details examples of the assignment of data for various basic *metering installations*. For Accumulation Meters, the Suffix values in CATS_REGISTER_IDENTIFIER and CATS_NMI_DATA_STREAM tables are always numeric.

13.1. Single Meter, no controlled load

An Accumulation Meter with a single register measuring a Non-Controlled Load will have a single Datastream suffix 11 for the *NMI*.

Table 27 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Value | 0123456789 | 11 | A | С |

The CATS_REGISTER_IDENTIFIER table indicates that the *meter* has only one register. The Suffix in the CATS_REGISTER_IDENTIFIER '11' denotes that data from RegisterID 01 contributes to the Datastream identified by Suffix 11 in CATS_NMI_DATA_STREAM table.

Table 28 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Value | ABCD1111 | 01 | KWH | ALLDAY | 11 | No |

The ElectricityDataStream Suffix in CATS_NMI_DATA_STREAM table will be recorded as '11' by the MDP and the Suffix in CATS_REGISTER_IDENTIFIER table must then be '11'.

13.2. Two Single Element Meters, no controlled load

The *NMI* has two Accumulation Meters, each *meter* with single register. The data from the two *meters* will be submitted to MSATS as two Datastreams.

Table 29 Example CATS NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | 11 | А | С |
| | 0123456789 | 12 | A | С |

Table 30 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Values | ABCD1111 | 01 | KWH | ALLDAY | 11 | No |
| | XYZA1112 | 01 | KWH | ALLDAY | 12 | No |

13.3. Two Single Element Meters, one with controlled load

A *NMI* has two Accumulation Meters, each *meter* has a single register, and one *meter* is measuring a Controlled Load. The data from the two *meters* is submitted to MSATS as two ElectricityDataStream Suffixes.

Table 31 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | 11 | A | С |
| | 0123456789 | 42 | A | С |

Table 32 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Values | ABCD1111 | 01 | KWH | TOTAL | 11 | No |
| | XYZA1112 | 01 | KWH | CL1 | 42 | HWLoad |

13.4. One Meter with Two Registers, one measuring a controlled load

NMI has one Accumulation Meter with two registers. The second register is measuring a Controlled Load.

Table 33 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | 11 | Α | С |
| | 0123456789 | 41 | Α | С |

Table 34 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Value | ABCD1111 | 01 | KWH | PEAK | 11 | No |
| | ABCD1111 | 02 | KWH | CL1 | 41 | HWLoad |

13.5. Single Multi-function Meter

Accumulation Meter has 4 registers, one register being a Controlled Load.

Table 35 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | 11 | A | С |
| | 0123456789 | 21 | I | С |
| | 0123456789 | 31 | A | С |
| | 0123456789 | 41 | A | С |

Each register is separately identified in CATS_NMI_Data_Stream. However, register 2 on *meter* 1 is inactive in MSATS.

Table 36 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Values | ABCD1111 | 01 | KWH | ALLDAY | 11 | No |
| | ABCD1111 | 02 | KWH | NOTUSED | 21 | No |
| | ABCD1111 | 03 | KWH | OFFPEAK | 31 | No |
| | ABCD1111 | 04 | KWH | CL1 | 41 | HWLoad |

13.6. Two meters, three registers. One register measures a controlled load

Table 37 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | 11 | A | С |
| | 0123456789 | 21 | A | С |
| | 0123456789 | 42 | A | С |

Table 38 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix | Controlled Load |
|---------------|------------------|------------|---------------|-----------|--------|--------------------|
| Values | ABCD1111 | 01 | KWH | PEAK | 11 | No |
| | ABCD1111 | 02 | KWH | OFFPEAK | 21 | No |
| | XYZA1112 | 01 | KWH | CL1 | 42 | HWLoad |

14. ASSIGNMENT OF DATA – INTERVAL METERS

This section details examples of the assignment of data for various Interval Meters.

14.1. One meter

Table 39 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Value | 0123456789 | E1 | A | 1 |

The CATS_Register_Identifier table indicates that the *meter* has only one register. The Suffix in the CATS_REGISTER_IDENTIFIER [E1] denotes that data from RegisterID 01 contributes to the ElectricityDataStream Suffix identified by Suffix E1 in the CATS_NMI_DATA_STREAM table.

Table 40 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------------|------------|---------------|-----------|--------|
| Value | ABCD1111 | E1 | KWH | INTERVAL | E1 |

E1 indicates that it is a single element measuring export.

14.2. Import/Export meter

Interval Meter has a two registers, registering import and export *energy*. Multiple ElectricityDataStream Suffixes (E1 and B1) are defined for the *NMI*.

Table 41 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Value | 0123456789 | E1 | A | I |
| Value | 0123456789 | B1 | A | 1 |

The CATS_REGISTER_IDENTIFIER table indicates that the *meter* has two registers, one for IMPORT and one for EXPORT.

The Suffixes in the CATS_REGISTER_IDENTIFIER denote that data from RegisterIDs 'E1' and 'B1' align with the ElectricityDataStream Suffixes identified in theCATS_NMI_DATA_STREAM table.

Table 42 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------------|------------|---------------|-----------|--------|
| Values | ABCD1111 | E1 | KWH | INTERVAL | E1 |
| | ABCD1111 | B1 | KWH | INTERVAL | B1 |

Only one RegisterID with the Suffix 'E1' permitted per *meter* in CATS_REGISTER_IDENTIFIER.

Only one RegisterID with the Suffix 'B1' permitted per meter in CATS_REGISTER_IDENTIFIER.

14.3. One meter: multiple registers

Interval Meter has a single measurement element registering import and export *energy*, reactive and *voltage*.

Table 43 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Value | 0123456789 | E1 | A | 1 |
| Value | 0123456789 | B1 | A | 1 |
| Value | 0123456789 | Q1 | A | N |
| Value | 0123456789 | K1 | A | N |

The CATS_Register_Identifier table indicates that the *meter* has five registers: two for IMPORT of *energy* and reactive; two for EXPORT of *energy* and reactive; and one for *voltage* monitoring.

Table 44 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------------|------------|---------------|-----------|--------|
| Values | ABCD1111 | E1 | KWH | INTERVAL | E1 |
| | ABCD1111 | B1 | KWH | INTERVAL | B1 |
| | ABCD1111 | Q1 | KVARH | INTERVAL | Q1 |
| | ABCD1111 | K1 | KVARH | INTERVAL | K1 |
| | ABCD1111 | V1 | VOLTS | INTERVAL | V1 |

14.4. One meter: Twin Measurement Elements

Certain multifunction *meters* have the capability for initial installation as an Accumulation Meter, but can be re-programmed to provide *interval metering data*.

The NER do not permit the use of two different types of *metering installation* on the one *NMI*, and therefore these two *metering* functions MUST NOT be active simultaneously in MSATS. The MDP and MC will be held accountable for a breach of this requirement.

The CATS_REGISTER_IDENTIFIER can be used to record the *meter* capability.

The CATS_REGISTER_IDENTIFIER table values for this *meter* when it is operated as an Interval Meter are shown below. The RegisterID for the Accumulation Meter registers in this type of *meter* are user defined. The Interval Meter suffixes must be added to the *NMI* and made active, and the basic Suffixes made inactive at the same date.

Table 45 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 0123456789 | E1 | A | 1 |
| | 0123456789 | E2 | A | I |
| | 0123456789 | 11 | I | C |
| | 0123456789 | 21 | I | С |

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| | 0123456789 | 31 | L | С |
| | 0123456789 | 41 | T | С |

Table 46 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------------|------------|---------------|-----------|--------|
| Values | AB888888 | E1 | KWH | INTERVAL | E1 |
| | AB888888 | E2 | KWH | INTERVAL | E2 |
| | AB888888 | 11 | KWH | PEAK | 11 |
| | AB888888 | 21 | KWH | OFFPEAK | 21 |
| | AB888888 | 31 | KWH | PEAK | 31 |
| | AB888888 | 41 | KWH | OFFPEAK | 41 |

If a second *meter* of the same configuration were established on this *NMI*, 'E3' and 'E4' RegisterIDs in the CATS_REGISTER_IDENTIFIER table and ElectricityDataStream Suffixes in the CATS_DATA_STREAM table would be required in order to provide unambiguous identification of Datastreams.

14.5. NCONUML and UMCP

Table 47 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 1144885588 | E1 | A | 1 |

Table 48 Example CATS_REGISTER_IDENTIFIER

| Data Element: | Serial Number | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------------|------------|---------------|-----------|--------|
| Values | Dummy Value | E1 | KWH | INTERVAL | E1 |

15. ASSIGNMENTS OF DATA – SAMPLE METERS

The application of profiles in accordance with the Metrology Procedure requires *interval metering data* from Sites that have Accumulation Metering. However, the NER do not permit different metering installation types on the one *NMI*, and in any case, the Participants associated with the *interval metering data* are different to those associated with the Accumulation Meter. Therefore, for these *connection points*, two different *NMIs* are used.

There are *meters* that can combine the required Accumulation Metering and Interval Metering functions. An example is shown below.

15.1. Multifunction Sample Meter

In this case, a single *meter* is registered within MSATS for two purposes against two *NMIs*. This is a special case, and should not be used other than for this non-standard purpose. The *meter* has two circuits, with Accumulation Metering for *energy* trading and Interval Metering for the sample profile.

In this example, NMI 9801234567 is associated with the sample *meter installation* and NMI 9876543210 with the End User installation.

Table 49 Example CATS_NMI_DATA_STREAM

| Data Element: | NMI | Suffix | ElectricityDataStream/Status | DataStreamType |
|---------------|------------|--------|------------------------------|----------------|
| Values | 9801234567 | E1 | A | P |
| | 9876543210 | 11 | I | С |
| | 9876543210 | 12 | 1 | С |
| | 9876543210 | 41 | A | C |

Table 50 Example CATS_REGISTER_IDENTIFIER

| Data Element: | NMI | MeterSerial | RegisterID | UnitOfMeasure | TimeOfDay | Suffix |
|---------------|------------|-------------|------------|---------------|-----------|--------|
| Values | 9801234567 | AB888888 | E1 | KWH | ALLDAY | E1 |
| | 9876543210 | AB888888 | 11 | KWH | PEAK | 11 |
| | 9876543210 | AB888888 | 12 | KWH | OFFPEAK | 12 |
| | 9876543210 | AB888888 | 41 | KWH | CL1 | 41 |

16. DATA TYPE CONVENTIONS

The Browser formats used in section 16 are as defined in the following table.

The value of "x" must be positive and cannot be zero.

For explanation of the aseXML data types shown in section 16 refer

http://www.w3.org/TR/xmlschema-0/#simpleTypesTable

Table: Browser Formats

| | Format | Definition |
|---|-------------|---|
| 1 | CHAR(x) | Indicates a field that can only contain alphanumeric characters and must contain exactly "x" characters. Note that leading and trailing "spaces" are considered significant (i.e. form part of the "x" characters for the field). |
| 2 | VARCHAR2(x) | Indicates a character field containing up to "x" characters. |
| 3 | NUMBER(x) | Indicates a positive integer (zero or above) up to "x" significant digits long; any leading zeroes are not significant and hence "050" is equivalent to "50". |
| 4 | NUMBER(x.y) | Indicates a positive number with up to "x" significant characters to the left of the decimal point and "y" decimal places after the decimal point (trailing zeros are optional). In other words, the maximum length of the field as a whole is "x"+"y"+1 characters (the +1 reserving space for the decimal point). |
