

STANDING DATA FOR MSATS

PREPARED BY: AEMO MARKETS
VERSION: [MSDR 4.4](#)
EFFECTIVE DATE: [This version of the document is not yet effective. AEMO will provide participants with at least 8 months' notice prior to the effective date.](#)
[01 December 2017](#)
STATUS: [DRAFT/FINAL](#)

Approved for distribution and use by:

APPROVED BY: Peter Geers
TITLE: Chief Strategy and Markets Officer

DATE: TBD

VERSION RELEASE HISTORY

Version	Effective Date	Summary of Changes
4.0	Aug 2009	Update to AEMO Format
4.1	19/04/2012	Updates to NMI Data tables to include Feeder Class, Customer Classification Code & Customer Threshold Code and minor data corrections.
4.2	28/08/2013	Updated wording for Nx suffixes in sections 8, 9 and 12. Updated reference to the CATS procedures for Embedded Networks in section 7. Added new data stream type codes under section 11: Reference Tables. Updated reference to the NEM Metrology Procedures in section 15.
4.3	01 December 2017	Updated to incorporate: <ul style="list-style-type: none"> National Electricity Amendment (Expanding competition in metering and related services) Rule 2015. No.12; National Electricity Amendment (Embedded Networks) Rule 2015 No. 15; and National Electricity Amendment (Meter Replacement Processes) Rule 2016 No. 2.
4.4	01 December 2017	Final Version
		<u>This version of the document is not yet effective. AEMO will provide participants with at least 8 months' notice prior to the effective date.</u>

1. INTRODUCTION

1.1. Purpose and scope

This document details the data requirements for the various data elements comprising the CATS Standing Data stored for each *NMI*, together with relevant examples and definitions.

1.2. Definitions and interpretation

The Retail Electricity Market Procedures – Glossary and Framework:

- a) is incorporated into and forms part of this document; and
- b) should be read with this document.

1.3. Related documents

2. BACKGROUND

The five MSATS master tables contain the standing data stored for each *NMI*. They are the following:

Table 1 MSATS Master Tables

Table	Summary of Contents
CATS_NMI_DATA	Address, TNI Code, DLF Code, aggregate flag, embedded network names, Jurisdiction, NMI status code, etc
CATS_NMI_PARTICIPANT_RELATIONS	Roles and associated Participants. Separate records are maintained for each Role/Participant relationship.
CATS_NMI_DATA_STREAM	Suffix, ADL Code, Profile Name, Datastream type and datastream status of each MDM Datastream.
CATS_METER_REGISTER	Meter Serial ID, meter type, meter manufacturer, test results, etc
CATS_REGISTER_IDENTIFIER	Meter Serial ID, Network Tariff Code, unit of measure etc

For a *NMI* to be capable of being used in MSATS, it must have the following minimum set of data:

- At least one record on the CATS_NMI_DATA table; and

- At least eight records on the CATS_NMI_PARTICIPANT_RELATIONS table, one for each of the mandatory roles (ROLR, LNSP, LR, RP, FRMP, MDP, MPC and MPB).

It will also normally have:

- At least one record on each of the CATS_METER_REGISTER and CATS_REGISTER_IDENTIFIER (there should be at least one record for each *meter* and register associated with the *NMI*) tables.

NMIs may or may not have:

- Records on the CATS_NMI_DATA_STREAM table. If *metering data* is to be submitted to MDM there must be at least one valid record on this table.

Every time a change is made to any of the data in any of these tables, the old records are made inactive and new records are created, thus ensuring that there is a complete history of all changes.

3. CONVENTIONS USED WITHIN THIS DOCUMENT

The format of the data fields in the 'Browser Format Column' column of Tables is as defined in section 18.

The following information defines the coded entries in columns used in Tables 3 - 9.

3.1. Column Headed: Standing Data Required

The column indicates the requirement to provide this data to MSATS.

Table 2 Explanation of Standing Data Requirements

Requirement	Description
MANDATORY	Transfer, Validation or processing cannot proceed without this data.
REQUIRED	This data must be provided if this information is available.
OPTIONAL	This data is not required, but will be accepted if delivered.
Address-Option-1	AEMO's preferred address option. If the applicable fields labelled "Address-Option-1" cannot be provided, "Address-Option-2" is MANDATORY.
Address-Option-2	AEMO's non-preferred address option. If Address-Option-1 is provided, these fields are not to be supplied.

3.2. NMIs Affected

Data must be provided for every *NMI* in MSATS. The *NMIs* that must be registered in MSATS are:

- Every First Tier NMI and Second Tier NMI in the NEM.
- Sample meters for non-NSLP profile calculations and embedded generating units for NSLP calculations.
- Every wholesale connection point in the NEM, including generation, interconnectors and bulk supply points.

4. CATS_METER_REGISTER

The CATS_Meter_Register table is a NMI master table containing data that is stored at the Meter Register level. Information stored at this level includes the NSRD. It is updated whenever a Change Request containing inbound Meter Register data is completed.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 3 CATS_METER_REGISTER

Data Element Name	Description	Standing Data Required	Party to Provide
<u>AdditionalSiteInformation</u>	Free text, descriptive of the Site, describing Site access and the relationship between the metering point and the connection point.	OPTIONAL	MPB
<u>AssetManagementPlan</u>	Asset management plan If a Site plan is used, free text description of plan. If a sample plan is used, the name of the AEMO approved plan.	OPTIONAL	MPB
<u>CalibrationTables</u>	Calibration tables — details of any calibration factors programmed into the meter.	OPTIONAL	MPB
<u>CommunicationsEquipmentType</u>	Used to store baud rate for installed communication equipment in a code, calculated by dividing the baud rate by 100, of the installed communication equipment. For example, 48 = 4800 baud.	OPTIONAL	MPB
<u>CommunicationsProtocol</u>	Used to provide details of access through switch units (if installed). Data to include Switch Unit, Dial Pkg, Port#, userid, password.	OPTIONAL	MPB
<u>CurrentTransformerLocation</u>	A free text field to indicate the location of the current transformer at the site.	REQUIRED NOT USED for NCONUML , <u>BULK, XBOUNDRY and INTERCON</u>	MPB
<u>CurrentTransformerType</u>	Whether the current transformer at the metering installation is single phase or three phase. This value must correspond to a valid Current Transformer Type value in the <u>Valid Transformer Fields values reference table listed in section 11</u> .	REQUIRED NOT USED for NCONUML , <u>BULK, XBOUNDRY and INTERCON</u>	MPB
<u>CurrentTransformerRatio</u>	The ratio of the current transformer at the metering installation. This value must correspond to a valid Current Transformer Ratio value in the <u>Valid Transformer Fields values reference table listed in section 11</u> .	REQUIRED NOT USED for NCONUML , <u>BULK, XBOUNDRY and INTERCON</u>	MPB

STANDING DATA FOR MSATS

CurrentTransformerAccuracyClass	The accuracy class of the current transformer at the metering installation. This value must correspond to a valid Current Transformer Accuracy Class value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB
CurrentTransformerTest	Type of test performed on metering installation with Current Transformer which can be one of the following: <ul style="list-style-type: none"> • Tested (definition – part of 100% testing) • Sample Tested (definition – tested as part of a sample plan) • Sample (definition – part of an approved sample plan) 	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB
CurrentTransformerSampleFamilyID	Sample Family ID for metering installation with Current Transformer, required as part of a family within an approved sample plan.	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB
CurrentTransformerTestDate	A date that represents actual test date for metering installations with Current Transformer tested or date represents family expiry date for those included in an approved sample plan.	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB
DataConversion	Actual Pulse Multipliers	OPTIONAL	MPB
DataValidations	Free text description of required data validations.	OPTIONAL	MPB
EstimationInstructions	Estimation instructions. Free text field	OPTIONAL	MPB

STANDING DATA FOR MSATS

<p><u>GPSCoordinatesLat</u></p>	<p>GPS Coordinates Latitude is the angular measurement North or South of the equator in decimal degrees (to 7 decimal places). Angles South of the equator will be represented as negative values. E.g. -37.8886755. It is the latitude of the metering installation and not of the site.</p> <p>Mandatory for:</p> <ul style="list-style-type: none"> All meters where the site postcode is a "Designated regional area postcode". All MRIM meters. All new installations. <p>Required for any interval meters that are not MRIM. Optional for all other meters.</p>	<p>MANDATORY as per the description (Transition period: REQUIRED for 36 months from effective date of these Procedures, MANDATORY thereafter)</p> <p>REQUIRED as per the description OPTIONAL as per the description</p>	<p>MPB</p>
<p><u>GPSCoordinatesLong</u></p>	<p>GPS coordinates Longitude is the angular measurement East or West of the prime meridian in decimal degrees (to 7 decimal places). Angles East of the Prime Meridian (e.g. Australia) will be represented as positive values. E.g. +145.1410361. It is the longitude of the metering installation and not of the site.</p> <p>Mandatory for:</p> <ul style="list-style-type: none"> All meters where the site postcode is a "Designated regional area postcode". All MRIM meters. All new installations. <p>Required for any interval meters that are not MRIM. Optional for all other meters.</p>	<p>MANDATORY as per the description (Transition period: REQUIRED for 36 months from effective date of these Procedures, MANDATORY thereafter)</p> <p>REQUIRED as per the description OPTIONAL as per the description</p>	<p>MPB</p>
<p><u>LastTestDate</u></p>	<p>The date on which the <i>metering installation</i> was last tested or inspected by the Metering Provider "B". This date will be used if clause 7.9.4(a) of the NER needs to be applied.</p>	<p>REQUIRED OPTIONAL</p>	<p>MPB</p>
<p><u>MeasurementType</u></p>	<p>Code based on the <i>NMI</i> suffix codes, indicating the type of measurements available from the meter. For example, EBQK – bidirectional energy plus reactive Interval Meter.</p>	<p>OPTIONAL NOT USED for types 6 & 7 Transfers.</p>	<p>MPB</p>
<p><u>Constant</u></p>	<p>The meter K_e (intrinsic constraint of meter in Wh/pulse).</p>	<p>OPTIONAL</p>	<p>MPB</p>

STANDING DATA FOR MSATS

Hazard	Free text or code identifying hazards on the site associated with reading, maintaining or installing the meter. If the following are present at the metering installation, they should be listed in this field: Asbestos Free text or code identifying hazards associated with reading the meter.	OPTIONAL REQUIRED	MPB
InstallationTypeCode	The Metering Installation Type Code indicates whether the metering installation has to be manually read. This value must correspond to a valid MeterInstallCode in the Meter Installation Codes reference table listed in section 11.	MANDATORY	MPB
Location	Free text descriptive material identifying the relationship between the location of the metering point and the connection point.	OPTIONAL REQUIRED	MPB
Manufacturer	Free text field to identify the manufacturer of the installed meter. This field will be an enumerated list of values corresponding to current Meter Manufacturers in the industry with the options of UNMETERED and UNKNOWN.	MANDATORY OPTIONAL	MPB
Model	Free text field to identify the meter manufacturer's designation for the meter model. This field will be an enumerated list of values corresponding to current Meter Models in the industry with the options of UNMETERED and UNKNOWN.	MANDATORY OPTIONAL	MPB
Point	Identifies the meter uniquely for the NMI. In the format 0n, where n is the meter number per the protocol described in the NMI Procedure. The allowed values are 01 to 09, 0A to 0H, 0J to 0N, 0P to 0Z. This will allow an audit trail when one meter is removed and a new meter is given the same MeterPoint value.	OPTIONAL	MPB
Program	Free text field providing a description of the program used to initialise the installed meter.	OPTIONAL	MPB

STANDING DATA FOR MSATS

ReadTypeCode	<p>Code to denote the method and frequency of Meter Reading.</p> <p>First Character = Remote (R) or Manual (M);</p> <p>Second Character = Mode</p> <p>T = telephone</p> <p>W = wireless</p> <p>P = powerline</p> <p>I = infra-red</p> <p>G = galvanic</p> <p>V = visual</p> <p>Third Character = Frequency of Scheduled Meter Readings</p> <p>1 = Twelve times per year</p> <p>2 = Six times per year</p> <p>3 = Four times per year</p> <p>D = Daily or weekly</p> <p>Fourth Character =</p> <p><u>o</u> <u>A – 5 minute</u></p> <p><u>o</u> <u>B – 15 minute</u></p> <p><u>o</u> <u>C – 30 minute</u></p> <p><u>o</u> <u>D – Cannot convert to 5-minute (i.e. due to metering installation de-energised)</u></p> <p><u>o</u> <u>M - Manually Read Accumulation Meter</u></p> <p><u>For example, MV3M = Manual, Visual, Quarterly, Manually Read Accumulation Meter; RWDC = Remote, Wireless, Daily, 30 minutes interval.</u></p> <p><u>Undefined.</u></p> <p><u>For example, MV3 = Manual, Visual, Quarterly.</u></p>	OPTIONAL REQUIRED	MPB
Route	The route identifier the meter is currently being read in.	OPTIONAL	MPB
SerialNumber	<p>The Meter Serial ID uniquely identifies a <i>meter</i> for a given <i>NMI</i>. Maximum 12 Characters (alpha numeric). Unique for <i>NMI</i>.</p> <p>Use dummy for UMCP (Type 7) and logical (meters).</p> <p>Except for UMCP and logical, SerialNumber should be as displayed on the physical device (also known as property number).</p> <p>SerialNumber to be property number if exists, otherwise the <i>meter</i> manufacturer's serial number, otherwise dummy number.</p>	MANDATORY	MPB

STANDING DATA FOR MSATS

Status	A code to denote the status of the <i>meter</i> . This value must correspond to a valid ElectricityMeter/Status in the Meter and RegisterID Codes reference table listed in section 11.	MANDATORY	MPB
Use	A code identifying how the <i>meter</i> is used. <u>This value must correspond to a valid Meter Use value in the Valid Meter Use Codes reference table listed in section 11.</u>	MANDATORY OPTIONAL	MPB
NextScheduledReadDate	Indicates the Scheduled Next Read Date for the <i>meter</i> if a manual Meter Reading is required.	<u>MANDATORY for manually read meters, REQUIRED for Type 7 metering installations with calculated metering data where the forward estimate process is using the BLOCK methodology, and NOT USED for remotely read meters</u> NOT USED manually read meters and all Vic AMI meters OPTIONAL	MPB initially, then MDP for updates
NextTestDate	Next date on which the <i>meter</i> should be tested.	OPTIONAL	MPB
NMI	<i>NMI</i> . This number is unique for each <i>connection point</i> within the <i>NEM</i> .	MANDATORY	LNSP
Password	Read & time set passwords separated by a space.	OPTIONAL	MPB
RemotePhoneNumber	The public telephone number to contact a remote Site for <i>metering data</i>. Includes STD prefix and no spaces.	OPTIONAL	MPB
TestCalibrationProgram	Test & calibration program.	OPTIONAL	MPB
TestPerformedBy	Identifying the Metering Provider "B" and the technician responsible for conducting the last test. The technician is to be identified by a number unique to the Metering Provider "B".	OPTIONAL	MPB
TestResultAccuracy	The <u>accuracy figure result</u> from the test performed on the date indicated in the LastTestDate field. <u>This value must correspond to a valid Test Result value in the Valid Test Result Codes reference table listed in section 11.</u>	OPTIONAL <u>REQUIRED</u>	MPB
TestResultNotes	A statement of compliance indicating the standard of the test regime applied at the time of the last test.	OPTIONAL	MPB

STANDING DATA FOR MSATS

<u>TransformerLocation</u>	A free text field to identify the existence of instrument transformers and their location relative to the market connection point.	OPTIONAL	MPB
<u>TransformerRatio</u>	A statement of the available and applied <i>transformer ratios</i> .	OPTIONAL	MPB
<u>TransformerType</u>	An explanation of the type of <i>transformation</i> used.	OPTIONAL	MPB
<u>UserAccessRights</u>	Details of any End User access to the <i>metering installation</i> ; examples include pulse outputs, interface to consumer load management system, or consumer directly accessing data in <i>meter</i> by special agreement.	OPTIONAL	MPB
<u>VoltageTransformerLocation</u>	A free text field to indicate the location of the voltage transformer at the site.	REQUIRED NOT USED for NCONUML BULK, XBOUNDRY and INTERCON	MPB
<u>VoltageTransformerType</u>	Whether the voltage transformer at the metering installation is single phase or three phase. This value must correspond to a valid Voltage Transformer Type value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED NOT USED for NCONUML BULK, XBOUNDRY and INTERCON	MPB
<u>VoltageTransformerRatio</u>	The ratio of the voltage transformer at the metering installation. This value must correspond to a valid Voltage Transformer Ratio value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED NOT USED for NCONUML BULK, XBOUNDRY and INTERCON	MPB
<u>VoltageTransformerAccuracyClass</u>	The accuracy class of the voltage transformer at the metering installation. This value must correspond to a valid Voltage Transformer Type value in the Valid Transformer Fields values reference table listed in section 11.	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB
<u>VoltageTransformerTest</u>	Type of test performed on metering installation with Voltage Transformer which can be one of the following: <ul style="list-style-type: none"> • <u>Tested</u> (definition – part of 100% testing) • <u>Sample Tested</u> (definition – tested as part of a sample plan) • <u>Sample</u> (definition – part of an approved sample plan) 	REQUIRED NOT USED for BULK, XBOUNDRY and INTERCON	MPB

STANDING DATA FOR MSATS

<u>VoltageTransformerSampleFamilyID</u>	<u>Sample Family ID for metering installation with Voltage Transformer, required as part of a family within an approved sample plan</u>	<u>REQUIRED</u> <u>NOT USED for BULK, XBOUNDRY and INTERCON</u>	<u>MPB</u>
<u>VoltageTransformerTestDate</u>	<u>A date that represents actual test date for metering installation with Voltage Transformer tested or date represents family expiry date for those included in an approved sample plan.</u>	<u>REQUIRED</u> <u>NOT USED for BULK, XBOUNDRY and INTERCON</u>	<u>MPB</u>
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Participant sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

5. CATS_DLF_CODES

The CATS_DLF_Codes table contains a list of DLF Codes and their relevant values. The StartDate and DLFCode fields will need to be provided for *settlements* calculations.

Note: References to 'LNSP' include the ENM for child *connection points*.

Table 4 CATS_DLF_CODES

Data Element Name	Description	Standing Data Required	Party to Provide
DistributionLossFactorCode	A four character alpha-numeric code used to identify DLF values. All <i>NMIs</i> must be assigned a DLF Code. Refer to AEMO Distribution Loss Factor documents for each financial year..	MANDATORY	AEMO
DistributionLossFactorDescription	Description of the DLF Code and value.	MANDATORY	AEMO
DistributionLossFactor Value	Numeric value up to 5 decimal places, reflecting the value of the DLF Code.	MANDATORY	AEMO
JurisdictionCode	Jurisdiction code to which the <i>NMI</i> belongs. This value must correspond to a valid JurisdictionCode in the Jurisdiction Codes reference table in section 11.	MANDATORY	AEMO
RowStatus	Indicates whether the DLF Code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	AEMO
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

6. CATS_EMB_NET_ID_CODES

The CATS_EMB_NET_ID_CODES table contains embedded network identifier codes, which are used to identify which *embedded network* a NMI belongs to, either as a Parent NMI or a Child NMI.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 5 CATS_EMB_NET_ID_CODES

Data Element Name	Description	Standing Data Required	Party to Provide
EmbeddedNetwork Identifier	Embedded Network Code. Refer to Allocation of Embedded Network Codes for further details.	MANDATORY	AEMO
EmbeddedNetwork Description	Description of embedded network identifier.	MANDATORY	AEMO
SuburbOrPlaceOrLocality	Locality to which the embedded network identifier belongs.	MANDATORY	AEMO
PostCode	Postcode for the locality to which the embedded network identifier belongs.	MANDATORY	AEMO
StateOrTerritory	State or Territory abbreviation in accordance with AS 4590.	MANDATORY	AEMO
RowStatus	Indicates whether the code is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	AEMO
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

7. CATS_NMI_DATA

The CATS_NMI_DATA table records Master NMI Record data information. It is updated whenever a Change Request containing data in the CATS_INBOUND_NMI_DATA table is completed.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 6 CATS_NMI_DATA

Data Element Name	Description	Standing Data Required	Party to Provide
NMI	<i>NMI</i> . All alpha characters are Upper Case	MANDATORY	LNSP
NMI ClassificationCode	Code used to indicate the NMI Classification Code of this <i>NMI</i> . This value must correspond to a valid NMIClassCode value in the NMI Class Codes reference table listed in section 11.	MANDATORY	LNSP
MasterData/ StatusCode	Code used to indicate the status of the <i>NMI</i> . This value must correspond to a valid MasterData/Status value in the NMI Status Codes reference table listed in section 11.	MANDATORY	LNSP
TransmissionNode Identifier	This value must correspond to a valid code in the CATS_TNI_Codes table.	MANDATORY	LNSP
TransmissionNode Identifier2	TNI Code assigned, by AEMO, to a distribution network into which energy normally flows through a connection point between adjacent distribution networks that has a single NMI. This value must correspond to a valid code in the CATS TNI Codes table .	REQUIRED	AEMO
SharedIsolationPointFlag	A flag (Yes, No, Isolated or Unknown) to indicate the Shared Fuse Arrangement for whether the <i>metering installation has a shared fuse</i> . Valid values are Y, N, I or U, as the following e.g. "Y" indicates that a <i>Shared Fuse Arrangement is present</i> . "N" indicates that no <i>Shared Fuse Arrangement is present</i> . "I" indicates the <i>metering installation is Isolated independently but still part of a Shared Fuse Arrangement</i> . "U" indicates that the <i>presence of a Shared Fuse Arrangement is Unknown</i> .	MANDATORY	LNSP
MeterMalfunctionExemption Number	The exemption number granted by AEMO when a meter malfunction exemption is granted.	REQUIRED	AEMO
MeterMalfunctionExemption ExpiryDate	The end date of the malfunction exemption.	REQUIRED	AEMO
JurisdictionCode	Jurisdiction code to which the <i>NMI</i> belongs. This code defines the jurisdictional rules which apply to the transfer of this <i>NMI</i> .	MANDATORY	LNSP

	This value must correspond to a valid JurisdictionCode value in the Jurisdiction Codes reference table listed in section 11.		
DistributionLossFactorCode	Distribution Loss Factor Code. Must be a valid code in the CATS_DLF_Codes table.	MANDATORY	LNSP
ConnectionConfiguration	<p><u>Two-character code to denote information about the configuration of the connection point.</u></p> <p><u>First Character = Connection Type</u> <u>H = High voltage (as defined in the NER)</u> <u>L = Low voltage (lower than the threshold defined for high voltage in the NER)</u></p> <p><u>Second Character = Phases In Use</u> <u>1 = Single Phase</u> <u>2 = Two-Phase</u> <u>3 = Three-Phase</u></p> <p><u>Third Character = Presence of CT</u> <u>C = Current Transformer Present</u> <u>N = No Current Transformer Present</u></p> <p><u>Fourth Character = Presence of VT</u> <u>V = Voltage Transformer Present</u> <u>N = No Voltage Transformer Present</u></p>	MANDATORY	LNSP
ChildEmbeddedNetworkIdentifier	<p>The embedded network identifier code is used to identify which embedded network this given <i>NMI</i> is the 'child of'. (If on a <i>NMI</i> record this field is not populated, it is assumed the <i>NMI</i> is not the child of any other <i>NMI</i>.)</p> <p>Must be a valid code within the CATS_Emb_Net_ID_Codes table.</p> <p>This field cannot be used unless the Parent <i>NMI</i> has been created and assigned an embedded network identifier code. Refer section 30.4.a of the CATS Procedure.</p>	REQUIRED	LNSP
ParentEmbeddedNetworkIdentifier	<p>The embedded network identifier code is used to identify which <i>embedded network</i> this given <i>NMI</i> is the 'parent of'. (If on a <i>NMI</i> record this field is not populated, it is assumed the <i>NMI</i> is not the parent of any other <i>NMI</i>.)</p> <p>Must be a valid code within the CATS_Emb_Net_ID_Codes table.</p>	REQUIRED	LNSP
BuildingOrPropertyName	A free text description of the full name used to identify the physical building or property as part of its location.	REQUIREDAddress-Option-1	LNSP
LotNumber	The lot reference number allocated to an address prior to street numbering. The word 'LOT' is not required.	REQUIREDAddress-Option-1	LNSP
FlatOrUnitNumber	Specification of the number of the flat or unit which is a separately identifiable portion within a building/complex.	REQUIREDAddress-Option-1	LNSP
FlatOrUnitType	Specification of the type of flat or unit which is a separately identifiable portion within a	REQUIREDAddress-Option-1	LNSP

	building/complex. This value must correspond to a valid Flat Type Code, reference AS4590.		
FloorOrLevelNumber	Floor Number is used to identify the floor or level of a multi-storey building/complex.	REQUIREDAddress-Option-1	LNSP
FloorOrLevelType	Floor Type is used to identify the floor or level of a multi-storey building/complex. This value must correspond to a valid Floor Type Code in the Floor Type Codes, reference AS4590.	REQUIREDAddress-Option-1	LNSP
HouseNumber	The numeric reference of a house or property. Specifically the house number.	REQUIREDAddress-Option-1	LNSP
HouseNumberSuffix	The numeric reference of a house or property. Specifically the single character identifying the house number suffix.	REQUIREDAddress-Option-1	LNSP
<u>HouseNumberTo</u>	<u>The numeric reference of a house or property for scenarios where the address is similar to 4-10 Smith St. For example, HouseNumber = 4 and HouseNumberTo = 10 where the address is 4-10 Smith St.</u>	REQUIRED	LNSP
StreetName	Records the thoroughfare name. See notes at end of table for more information on Structured Addresses	REQUIREDAddress-Option-1	LNSP
StreetSuffix	Records street suffixes. This value must correspond to a valid Street Suffix Code, reference AS4590.	REQUIREDAddress-Option-1	LNSP
StreetType	Records the street type abbreviation. This value must correspond to a valid Street Type Code, reference AS4590.	REQUIREDAddress-Option-1	LNSP
SuburbOrPlaceOrLocality	The full name of the general locality containing the specific address.	MANDATORY	LNSP
LocationDescriptor	A general field to capture various references to address locations alongside another physical location.	REQUIREDAddress-Option-1	LNSP
PostCode	The descriptor for a postal delivery area, aligned with locality, suburb or place.	MANDATORY	LNSP
StateOrTerritory	Defined State or Territory abbreviation.	MANDATORY	LNSP
<u>GNAFPID</u>	<u>The Geocoded National Address File (G-NAF) Persistent Identifier (PID) for a given address.</u>	MANDATORY/REQUIRED	LNSP/AEMO
<u>SectionNumber</u>	<u>A section number corresponds to a reference that contributes to defining the legal boundaries of a plot of land in NSW and ACT</u>	REQUIRED for NSW and ACT OPTIONAL in all other jurisdictions	LNSP
<u>DPNumber</u>	<u>A deposited plan (DP) number corresponds to an image that defines the legal boundaries of a plot of land in NSW and ACT</u>	REQUIRED for NSW and ACT OPTIONAL in all other	LNSP

		<u>jurisdictions</u>	
DeliveryPointIdentifier	Delivery point identifier - the numeric descriptor for a postal delivery point which is equal to a physical address. The values are in the range 10000000 – 99999999.	OPTIONAL REQUIRED	LNSP/ AEMO
AddressLine	To provide the unstructured address (line 1) where a structured address cannot be supplied.	Address Option 2	LNSP
AddressLine	To provide the unstructured address (line 2) where a structured address cannot be supplied.	Address Option 2	LNSP
AddressLine	To provide the unstructured address (line 3) where a structured address cannot be supplied.	Address Option 2	LNSP
Aggregate	This flag determines whether the energy at this <i>connection point</i> is to be treated as consumer <i>load</i> or as a <i>generating unit</i> (this may include <i>generator auxiliary loads</i>). MSATS will initially set this field to "Y" This value must correspond to a valid Aggregate value in the Aggregate Codes reference table listed in section 11.	OPTIONAL	(Defaults to 'Y', AEMO updates to 'N' as required)
FromDate	Start date of the NMI Data record. This indicates the date on which the parameters of this particular NMI data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	LNSP
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

Feeder Class	A code to provide Participants with information to indicate the appropriate service level timeframes for performing work in relation to Service Order Requests.	Required in QLD where relevant OPTIONAL in all other jurisdictions	LNSP
Customer Classification Code	A code that defines the consumer class as defined in the National Energy Retail Regulations, or in overriding Jurisdictional instruments	MANDATORY	Current FRMP
Customer Classification Threshold Code	A code that defines the consumption threshold as defined in the National Energy Retail Regulations, or in overriding Jurisdictional instruments.	MANDATORY	LNSP

8. CATS_NMI_DATA_STREAM

The CATS_NMI_Data_Stream table is a NMI master table containing data that is stored at the *NMI* Datastream level. Information stored at this level includes suffixes, profile name, average daily load etc. It is updated whenever a Change Request containing inbound Datastream data is completed.

Note: Data is only required for this table if the *NMI* is active in the NEM or is used for profile peel-off in accordance with the Metrology Procedure.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 7 CATS_NMI_DATA_STREAM

Data Element Name	Description	Standing Data Required	Party to Provide
NMI	<i>NMI</i>	MANDATORY	MDP LNSP
ElectricityDataStream/Suffix	Metering Datastream identifier (for MDM). Identifies the Datastream as delivered to AEMO for settlements purposes. The value must be a valid suffix for this <i>NMI</i> and is active for this date range. The value must comply with requirements of the NMI Procedure. If the MeterInstallCode is COMMSn, MRIM, MRAM, VICAMI or UMCP, the Suffix value must be in the form Nx where DataStreamType is I or P for an interval Datastream. If the MeterInstallCode is BASIC, the Suffix value must be numeric.	MANDATORY	MDP
ElectricityDataStream/Status	Code used to indicate the status of the suffix. This value must correspond to a valid StreamStatusCode in the Stream Status Codes reference table listed in section 11.	MANDATORY	MDP
AveragedDailyLoad	The energy delivered through a <i>connection point</i> or <i>metering point</i> over an extended period normalised to a "per day" basis (kWh).	MANDATORY	MDP

DataStreamType	<p>Indicates the type of data that the the ElectricityDataStream / Suffix is recording.</p> <p>Profile data <i>meters</i> are:</p> <ol style="list-style-type: none"> For registering sample <i>meters</i> used for the calculation of profile shapes where the NMI and Datastream are not used for <i>settlements</i>. For providing external profile shapes into MDM (external PPS). <p>This value must correspond to a valid DataStreamType in the Data Stream Type Codes reference table listed in section 11.</p>	MANDATORY	MDP
ProfileName	<p>The Profile Name is a code that identifies the name of the algorithmically derived shape that is used to allocate a Datastream's consumption to TIs. This value must correspond to a valid code in the PROFILE table.</p> <p>For all Interval Meters and sample <i>meters</i>, this must be set to 'NOPROF'.</p> <p>For Accumulation Meters, refer to the MDM Profile for valid profile names.</p> <ul style="list-style-type: none"> In Victoria and the ACT, ProfileName must be NSLP. In NSW, QLD and SA, ProfileName must be NSLP or the relevant controlled load profile. <p>This value must correspond to a valid ProfileName value in the Profile Codes reference table listed in section 11.</p>	MANDATORY	MDP
FromDate	<p>Start date of the <i>NMI</i> data record. This indicates the date on which the parameters of this particular <i>NMI</i> data record apply from.</p> <p>The data applies from the beginning of this date (the start of the day, i.e. 00:00).</p>	MANDATORY	Party sending transaction
ToDate	<p>End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59).</p> <p>A default date of 9999-12-31 is recorded if EndDate is not provided.</p>	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	<p>Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).</p>	MANDATORY	System generated
MaintenanceDate	<p>Date and time the record was updated.</p> <p>A default date of 9999-12-31 is used when the record is created initially.</p> <p>If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.</p>	MANDATORY	System generated

CreationDate	Date and time the record was created.	MANDATORY	System generated
--------------	---------------------------------------	-----------	------------------

9. CATS_REGISTER_IDENTIFIER

The CATS_Register_Identifier table contains data that is stored at the register identifier level. Information stored at this level includes the Network Tariff Code. It is updated whenever a Change Request containing inbound register identifier data is completed.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 8 CATS_REGISTER_IDENTIFIER

Data Element Name	Description	Standing Data Required	Party to Provide
NMI	<i>NMI</i> . This number is unique for each <i>connection point</i> within the NEM.	MANDATORY	LNSP
SerialNumber	The Meter Serial ID uniquely identifies a <i>meter</i> for a given <i>NMI</i> . Maximum 12 Characters (alpha numeric). Unique for <i>NMI</i> . Use dummy for UMCP (Type 7) and logical (<i>meters</i>). Except for UMCP and logical, MeterSerial should be displayed on physical device also known as property number). SerialNumber to be property number if exists, otherwise the <i>meter</i> manufacturers' serial number, otherwise dummy number.	MANDATORY	MPB
RegisterID	The RegisterID is used to identify a data source that is obtained from the <i>meter</i> . A single <i>meter</i> may provide multiple data sources.	MANDATORY	MPB
NetworkTariffCode	The Network Tariff Code is a free text field required. The text must match the Network Tariff Codes supplied and published by the LNSP. Must be a valid code from the CATS_Network_Tariff_Codes table.	MANDATORY	MPB
NetworkAdditional Information	Free text field.	OPTIONAL REQUIRED	MPB
UnitOfMeasure	Code to identify the unit of measure for data held in this register.	MANDATORY	MPB
TimeOfDay	Code to identify the time validity of register contents. As published by each LNSP. <u>This value must correspond to a valid Time of Day value in the Time of Day Codes reference table listed in section 11. For Interval meters, use code "INTERVAL".</u>	MANDATORY	MPB
Multiplier	Multiplier required to take a register value and turn it into a value representing billable energy	MANDATORY	MPB

DialFormat	Describes the register display format. First number is the number of digits to the left of the decimal place, and the second number is the number of digits to the right of the decimal place.	MANDATORY	MPB
Suffix	Metering Datastream identifier (for MDM). Identifies each Datastream at the measurement element level for the <i>connection point</i> identified by the <i>NMI</i> . The value must be a valid suffix for this <i>NMI</i> and is active for this date range. The value must match the value provided in the MDFF File. The Suffix value must be unique for each <i>meter</i> . The value must comply with the NMI Procedure For interval data streams, the suffix will indicate the individual data streams contributing to the Nx Suffix value in the CATS_NMI_DataStream table. For basic data streams the value will be identical to the related Suffix value in the CATS_NMI_DataStream table.	MANDATORY	MPB
ControlledLoad	Indicates whether the <i>energy</i> recorded by this register is created under a Controlled Load regime ControlledLoad field will have "No" if register does not relate to a Controlled Load.If the register relates to a Controlled Load, <u>it must correspond to a valid Controlled Load value in the Controlled Load Codes reference table listed in section 11, it should contain a description of the Controlled Load regime.</u>	MANDATORY	MPB
RegisterDetail/ Status	Lookup code to indicate if register is active. Must ensure that RegisterDetail/Status is not Current (C) when ElectricityMeter/Status is Removed (R). This value must correspond to a valid RegisterDetail/Status from the Meter and RegisterID Codes reference table listed in section 11.	MANDATORY	MPB
ConsumptionType	Actual/Subtractive Indicator. Actual (A) implies volume of energy actually metered between two dates. Cumulative (C) indicates a Meter Reading for a specific date. A second Meter Reading is required to determine the consumption between those two Meter Reading dates. For an Interval Meter, ActCumInd = A. This value must correspond to a valid ConsumptionType from the Consumption Type Codes reference table listed in section 11.	MANDATORY	MPB
Demand1	This field contains the peak demand value for summer for network Tariff purposes. Units in kW or kVA	OPTIONAL	MPB (Refers to Network Tariff Code)

Demand2	This field contains an additional demand value (not Summer period). Units in kW or kVA.	OPTIONAL	MPB (Refers to Network Tariff Code)
FromDate	Start date of the NMI data record. This indicates the date on which the parameters of this particular NMI data record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Participant sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

10. CATS_NMI_PARTICIPANT_RELATIONS

The CATS_NMI_Participant_Relations table is a NMI master table containing data that stores the Roles that Participants play for each NMI. It is updated whenever a Change Request containing inbound Roles is completed. Each Role record, which contains a single Role code and a single Participant ID, has a start date and an end date, as well as information about when it was created and when it became inactive if it is no longer an active record.

Note: References to 'LNSP' include the ENM for *child connection points*.

Table 9 CATS_NMI_PARTICIPANT_RELATIONS

Data Element Name	Description	Standing Data Required	Party to Provide
-------------------	-------------	------------------------	------------------

Party	The Participant ID whose relationship (Role) with the <i>NMI</i> is defined in this table.	MANDATORY	LNSP
NMI	<i>NMI</i> . This number is unique for each <i>connection point</i> .	MANDATORY	LNSP
Role	This defines the relationship (Role) of the Participant with the <i>NMI</i> in this table.	MANDATORY	LNSP
FromDate	Start date of the record. This indicates the date on which the parameters of this particular record apply from. The data applies from the beginning of this date (the start of the day, i.e. 00:00).	MANDATORY	Party sending transaction
ToDate	End date of the record. This indicates the date on which the parameters of this particular record end. The data applies until the end of this date (the end of the day, i.e. 23:59). A default date of 9999-12-31 is recorded if EndDate is not provided.	MANDATORY (Defaults to high date unless supplied)	System generated unless supplied.
RowStatus	Indicates whether the record is active or inactive. Whenever a new record is created, it will be A (Active). A change to the data will make this record redundant and its MaintActFlg is changed to I (Inactive).	MANDATORY	System generated
MaintenanceDate	Date and time the record was updated. A default date of 9999-12-31 is used when the record is created initially. If the record is subsequently updated, its MaintUpdtDt is changed to the date and time the record was updated.	MANDATORY	System generated
CreationDate	Date and time the record was created.	MANDATORY	System generated

11. REFERENCE TABLES

Table 10 - Valid Aggregate Codes

Aggregate	Description
Y	Customer load
N	Generator NMI

Table 11 - Valid Consumption Type Codes

Consumptiontype	Description
A	Actual Consumption
C	Cumulative Consumption

Table 12 - Valid Datastream Type Codes

Datastreamtype	Description
I	Interval
C	Basic
P	Profile Data
1	Non-Market Active Import
2	Non-Market Active
3	Non-Market Reactive Import
4	Non-Market Reactive

Table 13 - Valid Profile Codes

ProfileName	Description
NSLP	<p>Net System Load Profile.</p> <p>The profile is calculated by MSATS. NSLP represents the system load after all actual <i>interval metering data</i> or specified previously-calculated profiled <i>metering data</i> that is not dependent on the NSLP has been subtracted from a known total system load and represents system-wide usage by consumption-type <i>metering installations</i>.</p>
CLOADNSWCE	<p>Controlled Load profile: Country Energy. (Now Essential Energy)</p> <p>Profile Names beginning with CLOAD are Controlled Load profiles. Controlled Load profiles are applied to Controlled Load Datastreams in NSW. There is one Controlled Load profile for each LNSP area. The names all begin with CLOADNSW to indicate that they are NSW Profile Names followed by two characters to indicate the LNSP area to which it belongs (e.g. EA = EnergyAustralia).</p>
CLOADNSWEA	Controlled Load profile: EnergyAustralia (Now Ausgrid).
CLOADNSWIE	Controlled Load profile: IntegralEnergy (Now Endeavour Energy)
QLDEGXCL31	Controlled Load profile Energex tariff 31
QLDEGXCL33	Controlled Load profile Energex tariff 33
SACLOAD	South Australian Controlled Load.
NOPROF	Used for interval Datastream types (to indicate that such Datastreams do not need to be profiled to obtain 'readings' for each <i>settlements</i> interval because the data is supplied in 30-minute intervals).

Table 14 Valid Transformer Fields values

Transformer Field	Values
<u>Current Transformer Ratio</u> (this field reflects the available and connected ratio)	<u>200 : 5</u> <u>800 : 5</u> <u>2000 : 5</u> <u>4000 : 5</u> <u>1500 : 5</u> <u>150 / 300 / 600 : 5 @ 150 : 5</u> <u>150 / 300 / 600 : 5 @ 300 : 5</u> <u>150 / 300 / 600 : 5 @ 600 : 5</u> <u>400 / 800 / 1200 : 5 @ 400 : 5</u> <u>400 / 800 / 1200 : 5 @ 800 : 5</u> <u>400 / 800 / 1200 : 5 @ 1200 : 5</u> <u>1000 / 2000 / 3000 : 5 @ 1000 : 5</u> <u>1000 / 2000 / 3000 : 5 @ 2000 : 5</u> <u>1000 / 2000 / 3000 : 5 @ 3000 : 5</u>

--------	--

Table 17 Valid Controlled Load Codes

ControlledLoad	Description
No	This register does not record controlled load.
CL1	Controlled load 1
CL2	Controlled load 2
CL3	Controlled load 3

Table 18 Valid Test Result Codes

Test Result	Description
PASS	Test has passed
FAIL	Test has failed

Note: Refer to the MSATS CATS Procedure section 4 for details on the valid codes for the following:

- Jurisdiction Codes
- Metering Installation Type Codes
- NMI Classification Codes
- NMI Status Codes
- Datastream Status Codes

12. USE OF NMI SUFFIX TO POPULATE CATS_REGISTER_IDENTIFIER

For any particular *connection point* there may be multiple energy measurement elements and data recorders with multiple channels. Accurate identification of Datastreams is essential. The NMI Procedure includes the requirements for the use of a suffix to the *NMI* that identifies these Datastreams. The *DataStreamSuffix* detailed in the NMI Procedure provides identification at the measurement element level for all Datastreams from the *connection point* identified by the *NMI*. The *DataStreamSuffix* is commonly known as the *NMISuffix*. The *NMISuffix* is labelled as 'Suffix' in the Browser and is the *ElectricityDataStream/Suffix* data element in aseXML.

The *NMISuffix* was first used in the NMI Procedure to describe, in conjunction with the *NMI*, the data transferred from the MDP to AEMO and Participants for *settlements*. The *NMISuffix* was further extended to describe Datastreams in MSATS, and numeric suffixes were developed to describe the data from type 6 *metering installations*.

In MSATS, the *NMISuffix* is used in the CATS_NMI_DATA_STREAM table to describe the data as delivered to AEMO. For *settlements* purposes this data must be 'NET' [Export from *network*, less import to *network*] and will be 'Nx' for an interval Datastream, or numeric for an Accumulation Meter.

In MSATS release 2.0 a new table, CATS_REGISTER_IDENTIFIER, was introduced to link identifiers for the source *meter* register(s) to the Datastream suffix in the CATS_NMI_DATA_STREAM table.

The purpose of the table is to enable the alignment of the data held in MSATS and the data being transferred between Participants in the B2B process.

This link is achieved through the RegisterID (which describes the data source at the *metering installation*) and ElectricityDataStream/Suffix (which describes the NMI Suffix to which the RegisterID contributes) data elements. This is a many-to-one relationship, i.e. there may be multiple RegisterID values for each ElectricityDataStream/Suffix value in the CATS_REGISTER_IDENTIFIER table.

- The RegisterID identifies the measurement element and type of measurement for an Interval Meter, and identifies the location of a stored energy value in an Accumulation Meter.
- The ElectricityDataStream/Suffix value in the CATS_NMI_DATA_STREAM table identifies the Datastream registered in MSATS. For *settlements* purposes, Interval Meter Datastreams will be the NET suffix (format Nx) and for Accumulation Meter Datastreams the suffix value is numeric. MSATS requires data to be delivered against this suffix (if the Datastream is ACTIVE). MSATS does not validate the values entered in this field.
- The ElectricityDataStream/Suffix value in the CATS_REGISTER_IDENTIFIER table identifies the individual Datastream(s) contributing to the ElectricityDataStream/Suffix value in the CATS_NMI_DATA_STREAM table. For interval Datastreams, the suffix(es) will indicate the individual Datastream(s) contributing to the Nx Suffix value in the CATS_NMI_DATA_STREAM table where the DataStreamType is P or I (Refer section 14 for examples). For accumulation Datastreams the value will be numeric and will be identical to the related Suffix value in the CATS_NMI_DATA_STREAM table (refer section 13 for examples).
- The ElectricityDataStream/Suffix values used in the CATS_REGISTER_IDENTIFIER table are used to identify *metering data* contained in MDFF Files (in the NMISuffix field).
- The linkage between the RegisterID and ElectricityDataStream/Suffix exists because the ElectricityDataStream/Suffix data element is populated in the CATS_REGISTER_IDENTIFIER table.
- The RegisterID data element has no standard format; therefore, the MPB must determine the appropriate population of this field, e.g. it may be used to indicate the programming code of the register.

There is an inconsistent understanding across industry of the meaning of the terms 'register' and 'datastream'. Conventionally, to field metering personnel, a 'register' contains a single value, while a 'datastream' represents an array of time separated register values in chronological order.

For Accumulation Meters, the RegisterID refers to the non-volatile storage of the cumulative energy register(s). The RegisterID will have identification with the displays of the *meters*, or identification of internal data stores.

For Accumulation Meters, the ElectricityDataStream/Suffix data element in the CATS_REGISTER_IDENTIFIER table may have a many-to-one relationship with the ElectricityDataStream/Suffix data element in the CATS_NMI_DATA_STREAM table. That is, the same Suffix may occur several times in the CATS_REGISTER_IDENTIFIER table and occur once only in the CATS_NMI_DATA_STREAM table.

For Interval Meters, the definition of the RegisterID field is less obvious. To make this field useful, the RegisterID should be associated with the ElectricityDataStream/Suffix. As Interval Meters may have multiple measurement elements and there may be multiple *meters* for a *NMI*, the MDP must manage Datastreams against a *NMI* to avoid duplication of ElectricityDataStream/Suffixes and provide correct mapping of RegisterIDs.

13. ASSIGNMENT OF DATA – ACCUMULATION METERS

This section details examples of the assignment of data for various basic *metering installations*. For Accumulation Meters, the Suffix values in CATS_REGISTER_IDENTIFIER and CATS_NMI_DATA_STREAM tables are always numeric.

13.1. Single Meter, no controlled load

A Accumulation Meter with a single register measuring a Non-Controlled Load will have a single Datastream suffix 11 for the *NMI*.

Table 14 **Table 19** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Value	0123456789	11	A

The CATS_REGISTER_IDENTIFIER table indicates that the *meter* has only one register. The Suffix in the CATS_REGISTER_IDENTIFIER '11' denotes that data from RegisterID 01 contributes to the Datastream identified by Suffix 11 in CATS_NMI_DATA_STREAM

Table 15 **Table 20** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Value	ABCD1111	01	KWH	ALLDAY	11	No

The Suffix in CATS_NMI_DATA_STREAM will be recorded as '11' by the MDP and the Suffix in CATS_REGISTER_IDENTIFIER must then be '11'.

13.2. ~~Two~~ Two Single Element Meters, no controlled load

The *NMI* has two Accumulation Meters, each *meter* with single register. The data from the two *meters* will be submitted to MSATS as two Datastreams.

Table 16 **Table 21** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Values	0123456789	11	A
	0123456789	12	A

Table 17 **Table 22** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	ALLDAY	11	No
	XYZA1112	01	KWH	ALLDAY	12	No

13.3. Two Single Element Meters, one with controlled load

A *NMI* has two Accumulation Meters, each *meter* has a single register, and one *meter* is measuring a Controlled Load. The data from the two *meters* is submitted to MSATS as two Datastreams.

Table 18 **Table 23** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
--------------	-----	--------	------------------------------

Value	0123456789	11	A
	0123456789	42	A

Table 19 **Table 24** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	ALLDAYTOTAL	11	No
	XYZA1112	01	KWH	CONTROLLED CL1	42	HWLoadCL1

13.4. One Meter with Two Registers, one measuring a controlled load

NMI has one Accumulation Meter with two registers. The second register is measuring a Controlled Load.

Table 20 **Table 25** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Value	0123456789	11	A
	0123456789	42	A

Table 21 **Table 26** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Value	ABCD1111	01	KWH	PEAK	11	No
	ABCD1111	02	KWH	CONTROLLED CL1	41	HWLoadCL3

13.5. Single Multi-function Meter

Accumulation Meter has 4 registers, one register being a Controlled Load.

Table 22 **Table 27** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Values	0123456789	11	A
	0123456789	21	I
	0123456789	31	A
	0123456789	41	A

Each register is separately identified in CATS_NMI_Data_Stream. However, register 2 on meter 1 is inactive in MSATS, and therefore data is not accepted by MSATS for this Suffix.

Table 23 **Table 28** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	PEAKALLDAY	11	No

	ABCD1111	02	KWH	SHOULDER NOTUSED	21	No
	ABCD1111	03	KWH	OFFPEAK	31	No
	ABCD1111	04	KWH	CONTROLLE DCL1	41	HWLoadCL3

Note: The *meter* may have register identification and therefore these numbers can be used in the table as RegisterID.

13.6. Two meters, three registers. One register measures a controlled load

Table 24 **Table 29** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Values	0123456789	11	A
	0123456789	21	A
	0123456789	42	A

Table 25 **Table 30** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix	Controlled Load
Values	ABCD1111	01	KWH	PEAK	11	No
	ABCD1111	02	KWH	OFFPAK	21	No
	XYZA1112	01	KWH	CONTROLLE DCL1	42	HWLoadCL2

14. ASSIGNMENT OF DATA – INTERVAL METERS

This section details examples of the assignment of data for various Interval Meters.

14.1. One meter

Table 26 **Table 31** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Value	0123456789	N1	A

The CATS_Register_Identifier table indicates that the *meter* has only one register. The Suffix in the CATS_REGISTER_IDENTIFIER [E1] denotes that data from RegisterID 01 contributes to the Datastream identified by Suffix N1 in the CATS_NMI_DATA_STREAM table.

Table 27 **Table 32** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Value	ABCD1111	01	KWH	ALLDAY	E1

E1 indicates that it is a single element measuring export.

14.2. Import/Export meter

Interval Meter has a two registers, registering import and export *energy*. A single Datastream suffix N1 is defined for the *NMI* indicating a netting-off of export less import Datastreams for this *connection point*.

Table 28 **Table 33** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Value	0123456789	N1	A

The CATS_REGISTER_IDENTIFIER table indicates that the *meter* has two registers, one for IMPORT and one for EXPORT.

Table 29 **Table 34** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	ABCD1111	E1	KWH	ALLDAYINTERVAL	E1
	ABCD1111	B1	KWH	ALLDAYINTERVAL	B1

Only one RegisterID with the Suffix 'E1' permitted per *meter* in CATS_REGISTER_IDENTIFIER.

Only one RegisterID with the Suffix 'B1' permitted per *meter* in CATS_REGISTER_IDENTIFIER.

The energy volumes for the Suffix 'N1' in CATS_NMI_DATA_STREAM are calculated by $N1 = E1 - B1$.

The Suffixes in the CATS_REGISTER_IDENTIFIER denote that data from RegisterIDs 'E1' and 'B1' contribute to the Datastream identified by Suffix 'N1' in CATS_NMI_DATA_STREAM. That is, the Datastreams 'E1' and 'B1' supplied by the MDP to the FRMP for this meter have contributed to the Datastream N1 in MSATS.

14.3. One meter: multiple registers

Interval Meter has a single measurement element registering import and export *energy*, reactive and *voltage*. A single Datastream Suffix 'N1' is defined for the *NMI* indicating netting-off of all *energy* Datastreams for this *connection point*.

Table 30 **Table 35** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Value	0123456789	N1	A

The CATS_Register_Identifier table indicates that the *meter* has five registers: two for IMPORT of *energy* and reactive; two for EXPORT of *energy* and reactive; and one for *voltage* monitoring. The Suffixes in the CATS_REGISTER_IDENTIFIER 'N1' denote that data from RegisterID 'E1' and 'B1' contribute to the Datastream identified by suffix N1 in CATS_NMI_DATA_STREAM.

Table 31 **Table 36** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	ABCD1111	E1	KWH	ALLDAYINTERVAL	E1

ABCD1111	B1	KWH	ALLDAYINTERVAL	B1
ABCD1111	Q1	KVARH	ALLDAYINTERVAL	Q1
ABCD1111	K1	KVARH	ALLDAYINTERVAL	K1
ABCD1111	V1	VOLTS	ALLDAYINTERVAL	V1

The energy volumes for the Suffix 'N1' is calculated by NET (E1 – B1).

14.4. One meter: Twin Measurement Elements

Certain multifunction *meters* have the capability for initial installation as an Accumulation Meter, but can be re-programmed to provide *interval metering data*.

The NER do not permit the use of two different types of *metering installation* on the one *NMI*, and therefore these two *metering* functions MUST NOT be active simultaneously in MSATS. The MDP and RP will be held accountable for a breach of this requirement.

The CATS_REGISTER_IDENTIFIER can be used to record the *meter* capability.

If this *meter* were configured as an Accumulation Meter in MSATS, the configuration might be as shown in the Tables 32 & 33.

Table 32 **Table 37** Example CATS_NMI_DATA_STREAM

Data Element:	NMI	Suffix	ElectricityDataStream/Status
Values	0123456789	N1	I
	0123456789	N2	I
	0123456789	11	A
	0123456789	21	A
	0123456789	31	A
	0123456789	41	A

Table 33 **Table 38** Example CATS_REGISTER_IDENTIFIER

Data Element:	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	AB888888	E1	KWH	ALLDAYINTERVAL	null
	AB888888	E2	KWH	ALLDAYINTERVAL	null
	AB888888	25	KWH	PEAK	11
	AB888888	26	KWH	SHOULDER	21
	AB888888	35	KWH	OFFPEAK	31
	AB888888	36	KWH	CL1	41

The CATS_REGISTER_IDENTIFIER table values for this *meter* when it is operated as an Interval Meter are shown below. The RegisterID for the Accumulation Meter registers in this type of *meter* are user defined. The Interval Meter suffixes must be added to the *NMI* and made active, and the basic Suffixes made inactive at the same date.

Table 34 **Table 39** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status
Values	0123456789	N1	A
	0123456789	N2	A
	0123456789	11	I
	0123456789	21	I
	0123456789	31	I
	0123456789	41	I

Table 35 **Table 40** Example CATS_REGISTER_IDENTIFIER

Data Element	Serial Number	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	AB888888	E1	KWH	ALLDAYINTERVAL	E1
	AB888888	E2	KWH	ALLDAYINTERVAL	E2
	AB888888	25	KWH	PEAK	null
	AB888888	26	KWH	OFFPEAK	null
	AB888888	35	KWH	PEAK	null
	AB888888	36	KWH	OFFPEAK	null

If a second *meter* of the same configuration were established on this NMI 'E3' and 'E4' would be required for the Datastreams to provide MDPs and *retailers* with unambiguous identification of Datastreams.

15. ASSIGNMENTS OF DATA – SAMPLE METERS

The application of profiles in accordance with the Metrology Procedure requires *interval metering data* from Sites that have Accumulation Metering. However, the NER do not permit different metering installation types on the one NMI, and in any case, the Participants associated with the *interval metering data* are different to those associated with the Accumulation Meter. Therefore, for these *connection points*, two different NMIs are used.

There are *meters* that can combine the required Accumulation Metering and Interval Metering functions. An example is shown below.

15.1. Multifunction Sample Meter

In this case, a single *meter* is registered within MSATS for two purposes against two NMIs. This is a special case, and should not be used other than for this non-standard purpose. The *meter* has two circuits, with Accumulation Metering for *energy* trading and Interval Metering for the sample profile.

In this example, NMI 9801234567 is associated with the sample *meter installation* and NMI 9876543210 with the End User installation.

Table 36 **Table 41** Example CATS_NMI_DATA_STREAM

Data Element	NMI	Suffix	ElectricityDataStream/Status	DataStreamType
Values	9801234567	N1	A	P

9876543210	11	I	C
9876543210	12	I	C
9876543210	41	A	C

Table 37 **Table 42** Example CATS_REGISTER_IDENTIFIER

Data Element	NMI	MeterSerial	RegisterID	UnitOfMeasure	TimeOfDay	Suffix
Values	9801234567	AB888888	E1	KWH	ALLDAYINTERVAL	E1
	9876543210	AB888888	11	KWH	PEAK	null
	9876543210	AB888888	12	KWH	OFFPEAK	null
	9876543210	AB888888	41	KWH	CL1	41

Note: Suffix '11/12' have a Status of 'I' for 1st Tier and 'A' for 2nd Tier.
 First tier *metering data* is not required for AEMO to settle the *market*.
 Controlled Load data for first tier and second tier is required by AEMO to settle the *market*.
 In this example, once the End User's Site becomes a Tier 2 Site, all three basic Datastreams need to become active (StreamStatusCode = A).

16. CROSS REFERENCE OF BROWSER AND ASEXML DATA ELEMENTS

The tables below list the names that are used in the MSATS browser for each of the MSATS tables detailed in sections 4 to 10. The table also provides the aseXML data element names and the respective formats used in each context.

In some cases, such as date fields, the format of the field is shown differently in the Browser to that used in the related aseXML transactions. Also, aseXML uses full words throughout, rather than the coded values used in the Browser.

Refer section 17 for examples of the typical data element values as shown in the Browser. Section 18 provides definitions of the Browser formats shown in this section.

Commented [AEMO1]: This section is subject to change through ASWG consultation and MSATS system design.

17. EXAMPLES OF TYPICAL FIELD VALUES

This section provides examples of typical sets of data element values associated with different types of *connection points*.

The data shown in each example is as shown in the Browser. This reverses the sequence of the day-month-year communicated via aseXML transactions.

18. DATA TYPE CONVENTIONS

The Browser formats used in section 16 are as defined in the following table.

The value of "x" must be positive and cannot be zero.

For explanation of the aseXML data types shown in section 16 refer

<http://www.w3.org/TR/xmlschema-0/#simpleTypesTable>

Table: Browser Formats

	Format	Definition
1	CHAR(x)	Indicates a field that can only contain alphanumeric characters and must contain exactly "x" characters. Note that leading and trailing "spaces" are considered significant (i.e. form part of the "x" characters for the field).
2	VARCHAR2(x)	Indicates a character field containing up to "x" characters.
3	NUMBER(x)	Indicates a positive integer (zero or above) up to "x" significant digits long; any leading zeroes are not significant and hence "050" is equivalent to "50".
4	NUMBER(x,y)	Indicates a positive number with up to "x" significant characters to the left of the decimal point and "y" decimal places after the decimal point (trailing zeros are optional). In other words, the maximum length of the field as a whole is "x"+"y"+1 characters (the +1 reserving space for the decimal point).
