

Amendment of Trigger Thresholds in the Automated Procedures for Identifying Intervals

Subject to Review Consultation

1. Total Failure of Institutional Competence, Integrity, and Rigour

The republication of AEMO's 2025 review on 8 July 2026 exposes the market operator as fundamentally incompetent, irresponsible, and completely non-independent.

The shocking admissions contained in this notice lay bare a total absence of engineering facts, scientific rigour, and operational ethics.

A Decade of Statistical Blindness:

AEMO admits that a "reporting error" in its data processing systems completely scrubbed 1,459 automated review intervals from its annual reporting over an entire decade (2016 to 2025).

Complete Real-Time Failure:

The revelation that not one single interval out of these 1,459 was identified in real time to contain a Manifestly Incorrect Input (MII) proves your automated procedures and data capturing systems are completely broken.

Arrogance Over Accountability:

For AEMO to defiantly claim that a massive 10-year black hole in data processing "does not impact its findings and recommendations" is an insult to the intelligence of everyday Australians. If AEMO cannot manage its own legacy databases, it cannot be trusted with this consultation or any aspect of grid security.

2. The TransGrid Litigation: Total Evaporation of Public Trust

The public cannot place any faith in AEMO or the regulatory framework when the Australian Energy Regulator (AER) has initiated Federal Court proceedings against TransGrid for alleged breaches of the National Electricity Rules.

Systemic Neglect:

The AER's litigation centres on sweeping failures in the compliance, management, and operation of generators and network infrastructure

A Broken System:

When the regulator is forced to take its own monopoly network operator to court for systemic failures, it proves the entire system lacks honesty.

AEMO expects the public to blindly accept new trigger thresholds for a network that is literally being sued by the government for failing to meet basic compliance standards.

3. The Fake "RenewaBULL" Swindle and Interconnector Nightmare

This extended consultation to alter trigger thresholds is nothing but a bureaucratic cover-up

designed to protect a diabolical, catastrophic energy transition being forced onto Australians against our express will.

Project EnergyConnect Failure:

This consultation attempts to establish trigger thresholds for the NSW1-SA1 (Project EnergyConnect) interconnector ahead of its late 2026 implementation. This project is already a total failure.

It relies on flawed, inferior components and suffers from immense corporate mismanagement.

Anti-Australian CCP Control:

Vital national infrastructure is being handed over to massive interconnectors that are against Australia's National Security - exposing Australia's critical energy infrastructure to hostile, CCP-controlling supply chains, coercion and a geopolitical nightmare.

Destruction of Rural Australia:

These unvetted, unproven transmission expansions are actively ripping through agricultural land, decimating regional communities, and destroying rural Australia completely against the will of its people.

4. Severe Financial Austerity Imposed on Consumers

The collusion between incompetent, non-independent regulators and predatory monopoly network operators serves a single, devastating purpose: forcing electricity consumers to endure severe economic austerity and ever-skyrocketing power bills.

While TransGrid actively applications the AER to recoup over \$1.1 billion in cost overruns for their botched projects, AEMO manipulates trigger thresholds—such as parameter 'X' and FCAS enablement—to mask extreme grid instability.

Everyday families are paying the price for your engineered failure.

Conclusion

We completely and unconditionally reject the validity of this extended consultation under NER Clause 3.9.2B(h).

AEMO has demonstrated it lacks the technical capacity, truthfulness, and ethical standing to manage the National Electricity Market.

We Now Need:

- An immediate halt to all trigger threshold alterations.
- A full independent, third-party audit of AEMO's defective 10-year data processing history.
- An immediate freeze on all destructive interconnector rollouts across rural Australia.
