

APCWG Meeting 7 May 2020 - Summary of proposed Market Procedure changes

- **Market Procedure: Reserve Capacity Security**

On 11 February 2020, the Minister for Energy amended the Wholesale Electricity Market Rules to implement changes to Reserve Capacity pricing arrangements. AEMO is proposing changes to the Market Procedure: Reserve Capacity Security to:

- Ensure consistency with the amending rules. In particular, AEMO has amended the Procedure to include requirements for DSM Reserve Capacity Security.
- Provide clarity for other procedural steps
- Update the procedure to align with AEMO's current template

(Note, AEMO is aware that there are some minor tracked deletions shown in the draft amended Market Procedure that are not required. These will be removed prior to formal consultation on the amendments).
